

Memorandum

Date: December 9, 2021
Submitted by: Community Services Department – Parks Division
Subject: Art Wilkinson Community Garden – Consultation Results

At the March 23, 2021 Regular Council meeting, Council considered a report dated February 24, 2021 from the Community Services Department – Parks Division regarding Food Security – Food Production in Parks (**Attachment 1**) and passed the following resolution:

RC21/150-152

THAT staff be directed to proceed with facilitating the establishment of two new satellite community gardens at Art Wilkinson Park and Town Centre Park as recommended in the report dated February 24, 2021 from the Community Services Department – Parks Division regarding Food Security – Food Production in Parks;

AND THAT the budget of up to \$62,000 to establish two new satellite community gardens be referred to the Finance Committee to identify a funding source;

AND THAT the report dated February 24, 2021 from the Community Services Department – Parks Division regarding Food Security – Food Production in Parks be referred to the Parks and Recreation Commission for further input on food security initiatives, including establishing a formal process for future community garden expansion;

AND THAT the Art Wilkinson Park Community Garden be expanded from 40 plots to 60 plots.

In preparing the February 24, 2021 report, staff analyzed the suitability of several potential community garden sites within parks. Criteria included solar access, site accessibility for transit, school or community partnership potential, access to water, current and future site use, and the number of available parking spaces. Based on these factors, regional attention on food security issues, and the need for additional community gardens to alleviate long waitlists, staff recommended Town Centre Park and Art Wilkinson Park as suitable areas to address demand for community garden space.

At the April 13, 2021 Regular Council meeting, Council provided the following additional direction to staff:

RC21/179

AND THAT the Glenayre Community Association be consulted prior to establishment of the Art Wilkinson Park Community Garden.

At the April 20, 2021 Committee of the Whole meeting, Council also directed staff to conduct community consultation prior to making changes to neighbourhood parks and amenity spaces.

Considered at the January 11, 2022 Council meeting

178

On September 20, 2021, staff launched a public engagement process through engage.portmoody.ca to gauge resident support in the Glenayre neighbourhood for the addition of a new community garden at Art Wilkinson Park.

In response to the question, “Are you in favour of adding a community garden to Art Wilkinson Park, of the 119 responses received, 60.5% were “No”, 31.9% were “Yes”, and 7.6% were “Unsure” (**Attachment 2**).

Survey respondents were also given the opportunity to provide feedback on the community garden proposal. Common themes included concerns related to increased traffic in the neighborhood, the gardens being an attractant for bears and increasing the potential for human-bear conflicts, and a community garden being unnecessary for the neighborhood as Glenayre features predominantly single-family homes with large yards. There were also concerns about a potential increase in crime and impacts on the safety of children.

Based on Council direction and the results of the public engagement process, the recommended resolution is:

THAT staff be directed to report back on alternate locations for the community garden as recommended in the memo dated December 9, 2021 from the Community Services Department – Parks Division regarding Art Wilkinson Community Garden – Consultation Results.

Should Council wish to proceed with the Art Wilkinson Park Community Garden, the following alternative resolution may be considered:

THAT the results of the public engagement process for the Art Wilkinson Community Garden be received for information as presented in the memo dated December 9, 2021 from the Community Services Department – Parks Division regarding Art Wilkinson Community Garden – Consultation Results;

AND THAT staff be directed to proceed with the Art Wilkinson Park Community Gardens.

City of Port Moody

Report/Recommendation to Council

Date: February 24, 2021
Submitted by: Community Services Department – Parks Division
Subject: Food Security – Food Production in Parks

Purpose

To update Council on options for City supported edible gardens, including community involvement, and the proposed establishment of two new satellite community garden locations.

Recommended Resolution(s)

THAT staff be directed to proceed with facilitating the establishment of two new satellite community gardens at Art Wilkinson Park and Town Centre Park as recommended in the report dated February 24, 2021 from the Community Services Department – Parks Division regarding Food Security – Food Production in Parks;

AND THAT the budget of \$53,000 to establish two new satellite community gardens be referred to the Finance Committee to identify a funding source.

AND THAT the report dated February 24, 2021 from the Community Services Department – Parks Division regarding Food Security – Food Production in Parks be referred to the Parks and Recreation Commission for further input on food security initiatives, including establishing a formal process for future community garden expansion.

Background

At the Closed Council meeting held on June 9, 2020, Council passed and released the following resolutions on Food Production:

CC20/112 to 114

That Port Moody invite the rest of the Tri-Cities to take part in a mapping study to identify available space on public and private land for community gardens;

AND THAT staff be directed to report back on options, costs, and implications associated with planting edible but non-animal-attractant plants in City green spaces;

AND THAT Port Moody support the Tri-Cities Farmer's Market to hold markets weekly in Port Moody all year;

AND THAT staff be directed to report back on costs and options for replicating the Victoria model of young plant distribution.

At the Regular Council meeting held on July 28, 2020, staff presented a report to Council focusing on the second and fourth resolutions (**Attachment 1**).

For the second resolution, staff highlighted three edible planting locations at City Hall, Pioneer Park, and the Arts Centre. These areas were intended to promote education and outreach, and were to be installed and maintained by staff.

For the fourth resolution, following consultation with the City of Victoria, staff determined that replication of a similar program would not be achievable at this time. Insufficient staff resources, absence of infrastructure such as greenhouses, lack of specialized food growing programs, and the need for better identification and coordination of food security and food production community partners, were identified as factors limiting the replication of the Victoria model.

Following discussion and clarification of the staff report, Council passed the following resolution:

RC20/311

THAT this item be referred to staff to report back on staff supported community involvement and on the possibility of turning the proposed food production areas into community gardens.

Discussion

The Parks and Recreation Master Plan (2016) has a number of references to food security and urban agriculture, with an emphasis on enhancing food security and social connectedness through more urban agriculture.

Currently, there are two community gardens in Port Moody:

- The Inlet Community Garden (established 2002) with 16 plots; and,
- Port Moody Police Tri Cities Community Garden (established 2013), with 62 plots.

Both gardens have long waitlists and experience a slow turnover of plots. The community garden at the Public Safety Building has a current waitlist of 65 and the Inlet Community Garden has a standing waitlist of 27; it can take many years to obtain a plot in Port Moody.

The options presented by staff for edible gardening areas in the July 28, 2020 report were selected for educational outreach purposes. The three locations put forward at the July 28, 2020, Regular Council meeting, are located at:

- City Hall Front Entrance containers (which were previously used for the ‘Where the Wild Things Grow’ community outreach project) and the City Hall traffic circle;
- Pioneer Park (raised planter); and
- Arts Centre (creation of a victory garden using existing landscape beds).

These locations are more appropriate for educational workshops for community engagement as they are smaller in size, and in the case of the City Hall traffic circle, not suitable for volunteers based on vehicle traffic safety considerations. Due to limited size, they will not alleviate long waitlists, with community involvement focused on educational outreach.

Staff analysed a variety of sites within parks (**Attachments 2 and 3**) in order to determine suitability for community garden expansion. Factors included solar access, site accessibility for transit, school or community partnership potential, access to water, current and future site use, and the amount of available parking spaces. Based on these factors, Art Wilkinson Park (**Attachment 4**) and Town Centre Park (**Attachment 5**) were identified as suitable locations to further consider the establishment of pilot satellite community gardens. Staff recommend that neighbourhood consultation be undertaken with the Glenayre Community Association for the Art Wilkinson location. Both areas of land provide sufficient space for a community garden to flourish, and have the capacity to meet future expansion needs. In addition, the data collected in **Attachment 2** will be made available for the mapping study to identify available space on public and private land for community gardens, put forward by Council as a resolution on June 9, 2020.

With respect to community involvement and expanding community garden spaces, staff are proposing the establishment of two satellite community garden locations in City parks as a pilot. Staff propose that the satellite locations be managed by the existing community garden groups within Port Moody, both who have expressed interest in expanding, with the intent of reducing their waitlists and providing additional areas within the City to promote food security. Moreover, the addition of two satellite community gardens will contribute to community development, environmental awareness, enhance positive social interactions, offer mental wellness benefits, and provide access to fresh food.

At both locations, site preparation is necessary, including the establishment of a water connection, the construction of raised timber plots, and the installation of soil and signage. Estimated costs are summarized below in Table 1.

Staff would prepare the area and construct the community garden for community groups to manage. This would involve design consultation with both the Grow Local Society (Public Safety Building Community Garden) and the Inlet Community Garden group.

Table 1 – Summary of Estimated Costs

Expenses (start-up costs)	Art Wilkinson (40 plots)	Town Centre Park-loco Road (20 plots)	Estimate Per Plot*
Site preparation and Design	\$1,000	\$500	
Water Connection	\$10,000	\$8,000	
Soil/mulch	\$1,600	\$800	\$40
Materials (raised planters**)	\$10,000	\$5,000	\$250
Fencing	N/A	\$3,600	
Miscellaneous Supplies	\$1,000	\$500	
Labour to construct (staff)	\$7,000	\$4,000	\$160
Total	\$30,600	\$22,400	\$450

* Based on planter dimensions of 8'x4'x1'

** Constructed out of untreated cedar

Once operational, the community gardens will operate at no cost to the City of Port Moody, with the exception of the winterization of the water supply in the spring and fall of each year by Parks staff.

The City would enter into a five-year agreement for the satellite community gardens. Each community garden group would adhere to the Parks Division Community Garden Guidelines (draft), **Attachment 6**. Existing agreements and garden bylaws apply to the new locations.

Staff consulted a variety of stakeholders and regional experts, including both the Inlet Community Garden and the Port Moody Police Tri Cities Community Garden, Farm to School BC, the City of Victoria, and Port Coquitlam, in order to establish the best practices for community gardens.

Furthermore, staff propose the two additional sites as a pilot project, with the intent of monitoring and establishing a future grant process for food security initiatives, including a formal process for future garden expansion. Staff propose that the Parks and Recreation Commission be consulted on these measures.

In addition, to provide educational outreach, staff propose the use of the Arts Centre horticulture beds for the installation of a Victory Garden. Parks staff will install and maintain edible plants combined with flowering annuals and perennials. The Victory Garden could be used to host educational seminars, with any harvested food to be donated to the food bank.

Other Option(s)

That the report dated February 24, 2021 from the Community Services Department – Parks Division regarding Food Security – Food Production in Parks be received for information.

Financial Implications

To establish two new community garden satellites at Art Wilkinson Park and Town Centre Park, a funding source will need to be identified for the budget of \$53,000.

Communications and Civic Engagement Initiatives

The establishment of two new community garden satellites will require external engagement with both of the existing community garden groups. Staff have liaised with both the Public Safety Building and Rocky Point Community Garden. Additional education material to support Urban Agriculture will be publicly shared on the City's website.

Council Strategic Plan Objectives

Enhancing food security is consistent with the Healthy Communities priority in the 2019-2022 Council Strategic Plan.

City of Port Moody

Report/Recommendation to Council

Date: July 10, 2020

Submitted by: Environment and Parks Department – Parks Division

Subject: Food Production – Parks

Purpose

To provide Council with an overview of options, costs, and implications associated with planting edible, but non-animal-attractant plants in City green spaces, and present a staff review of implications to consider costs and options for replicating the Victoria model of young plant distribution.

Recommended Resolution(s)

THAT staff be directed to proceed with the Food Production – Parks recommendations for planting non-animal-attractant plants in City green spaces as outlined in the report dated July 10, 2020 from the Environment and Parks Department – Parks Division regarding Food Production – Parks;

AND THAT the budget of \$39,790 to establish edible planting locations at City Hall, Pioneer Park, and the Arts Centre be referred to the Finance Committee to identify a funding source.

Background

At the Closed Council meeting held on June 9, 2020, Council passed and publicly released the following resolution on Food production:

CC20/112 to 114

THAT Port Moody invite the rest of the Tri-Cities to take part in a mapping study to identify available space on public and private land for community gardens;

AND THAT staff be directed to report back on options, costs, and implications associated with planting edible but non-animal-attractant plants in City green spaces;

AND THAT Port Moody support the Tri-Cities Farmer's Market to hold markets weekly in Port Moody all year;

AND THAT staff be directed to report back on costs and options for replicating the Victoria model of young plant distribution.

Considered at the January 11, 2022 Council meeting

187

Considered at the March 23, 2021 Council meeting

312

Considered at July 28, 2020 Council Meeting

352

This report responds to the second and fourth clauses of the above resolution.

Food production activities on City lands currently include the community gardens, a recent offering of an edible food project, and education and outreach workshops on organic gardening for residents.

The City's first edible planter project, "Where the Wild Things Grow," was initiated by Parks staff in June 2017 in partnership with the Port Moody Public Library, with funding from existing operating costs. This initiative built upon the 2016 Parks and Recreation Master Plan, which highlights the need for enhanced community food security and social connectedness. The project intent was to demonstrate how people can grow their own food at home and to promote the aesthetic contribution that fruit and vegetable plants can provide to home gardens. From June through September, 16 containers fronting City Hall were filled with 100% organic soil and planted with a variety of fruit and vegetable plants, featuring different combinations of companion plantings. During the project, staff hosted weekly tours that promoted discussions and sharing of food production best practices. Despite being well received, this project was not continued in 2018 due to the increased maintenance levels required to support the fruit and vegetable producing containers when compared with maintenance requirements for annual display planters.

Environment staff have hosted organic gardening workshops as part of the *Port Moody Naturally* education and outreach programming for Earth Week. These workshops focused on backyard vegetable growing for beginner gardeners and included information related to site location of the garden, soil preparation, plant choices, seed choices, watering, sun exposure, bear-aware gardening, diseases, gardening resources, etc. Staff anticipate hosting more workshops in 2021 and beyond.

There are two community gardens in Port Moody, the Rocky Point Community Garden (2002), and the Port Moody Police Tri-Cities Community Garden (2013), with 16 and 62 plots respectively. Both gardens have a wait list.

Discussion

Edible Plantings on City Lands

As noted above, staff initiated a small food production project on City lands in 2017. In response to the following clause of resolution CC20/112 to 114:

AND THAT staff be directed to report back on options, costs, and implications associated with planting edible but non-animal-attractant plants in City green spaces;

Staff have identified three edible planting options to promote education and outreach for urban agriculture within City greenspaces for 2020-2021. The proposed edible planting options vary in scope and scale and include raised planters, container planters, and a range of existing landscape and horticulture beds. A table listing details of the three options, including locations, installation costs, maintenance costs, and site considerations is included as **Attachment 1**. The total cost for the edible planting options is \$35,790. Images of the three options are included as **Attachment 2**.

Considered at the January 11, 2022 Council meeting

188

Considered at the March 23, 2021 Council meeting

313

Considered at July 28, 2020 Council Meeting

353

The three options and associated costs are summarized below:

- City Hall Front Entrance (containers and City Hall Circle) – \$17,790;
- Pioneer Park (raised planter) – \$9,970; and
- Arts Centre (Creation of a high-profile Victory Garden using existing landscape beds) – \$8,030.

Food production on City lands is a relatively new role for staff. Although traditional horticulture knowledge lends itself well to plant growth, urban food production requires detailed knowledge of parameters such as soil conditions, sun exposure, plant and seed selection, drainage, irrigation, disease, and bear-awareness. In light of the factors involved in the design, installation, and maintenance of successful edible food spaces on City lands, staff recommend moving forward in an incremental manner with the options listed above.

Parks Division staff will be collaborating with Environment Division staff on the edible plantings initiative for backyard gardening workshops and with the Port Moody Public Library for family-oriented education sessions on edible gardening. Successes, challenges, and lessons learned from this expansion into edible plantings will be reviewed and appropriate adjustments will be recommended for subsequent edible planting seasons. Staff will also coordinate with the Social Planner regarding the Tri-Cities Food Security Planning process to identify opportunities that may inform expansion or other adjustments to the edible planting initiative.

City of Victoria – Get Growing Victoria

Staff have prepared the following synopsis of the City of Victoria Edible Seedling Community Distribution Project in response to the following clause of resolution CC20/112 to 114:

AND THAT staff be directed to report back on costs and options for replicating the Victoria model of young plant distribution.

In April 2020, Victoria City Council directed staff to temporarily reprioritize operations in the existing municipal nursery for the growth and distribution of 75,000 edible plant seedlings to be distributed by community partners to support community members. The City of Victoria Food Systems Coordinator, in communication with staff, has confirmed that 50,000 edible plant seedlings have been distributed to date with another 25,000 to 30,000 anticipated for distribution in August.

Get Growing Victoria prioritizes support for people who have been disproportionately impacted by the pandemic and want to grow food at home, but may be facing barriers to access food plants and garden materials, or are facing barriers to access fresh, locally grown food. An overview of *Get Growing Victoria* is provided as **Attachment 3**. Several key foundational factors had been in place for some time prior to the Council direction for edible plants distribution that enabled a swift launch of the project. These factors include the establishment of the City's Urban Food Table, a food policy council, two and a half years ago. Volunteers meet monthly to provide advice on the development of policies and programs to support urban food production and pollinators. Many members of the Urban Food Table are also members of the food growing community who receive grants under the City's *Community Garden Volunteer Coordinator Grants* program.

Considered at the January 11, 2022 Council meeting

189

Considered at the March 23, 2021 Council meeting

314

Considered at July 28, 2020 Council Meeting

354

Urban Food Table volunteers were instrumental in providing advice for the project structure, particularly distribution options for the plant seedlings during COVID-19. In addition, the City was able to reallocate \$30,000 of remaining 2020 grant funds to provide support to three existing edible foods programs for the distribution of the edible plants (i.e. Greater Victoria School District, LifeCycles Project Society, and Farm to School BC). Details on the program, including seedling varieties chosen, seed suppliers, community partners, distribution, eligibility, and other City urban food production resources are included in **Attachment 3**. The following list identifies other City resources in place to support the program:

- 6,000ft² cold-frame greenhouse space;
- 2.5 FTE nursery staff to plant seeds and grow/weed vegetable seedlings (~4 weeks in April and June);
- 1 FTE Food Systems Coordinator;
- established City programming for Community Gardens and Orchards, Food Production Businesses, and Boulevard Gardening;
- established Grant Programs for City Micro-grants, Community Garden Volunteer Coordinator Grants, and My Great Neighbourhood Grants;
- 30 Community partners; and
- \$65,500 budget for Food Starts, Education and Outreach, and Distribution and Delivery.

Get Growing Victoria is an inspiring model for food growing and distribution to support those who have experienced loss of work, those who are immunocompromised, people with disabilities, seniors, indigenous people, at-risk youth, families in need, and/or people who self-identify as food insecure during COVID-19. Replication of a similar program in Port Moody would not be achievable at this time due to a number of factors, including: insufficient staff resources; absence of greenhouses; lack of specialized food growing programs, grants and funding; and a need for better identification and coordination of food security and food production community partners.

Though the City is not currently poised to embark on a program of this magnitude, we are moving in a direction that supports strong community foundations aimed at deepening understanding of local food security and food literacy. A successful Union of British Columbia Municipalities grant was announced this spring for the Tri-Cities and Village of Anmore Food Security Assessment and Action Plan. This regional funding will enable a food security assessment for the Tri-Cities and the Village of Anmore that includes the identification of assets, weaknesses, opportunities, and threats and recommendations for action. As learned from the *Get Growing Victoria* program, implementation of food growing initiatives to promote food security and food literacy requires strong ties to build capacity between community and municipal partners. Work on the Plan will facilitate and foster these ties to better position the City to consider promotion of appropriately-scaled food security and food literacy plans and programs in the future.

Other Options

THAT the report dated July 10, 2020 from the Environment and Parks Department – Parks Division regarding Food Production – Parks be received for information.

Considered at the January 11, 2022 Council meeting

190

Considered at the March 23, 2021 Council meeting

315

Considered at July 28, 2020 Council Meeting

355

Financial Implications

To establish new edible planting locations at City Hall, Pioneer Park, and the Arts Centre, a funding source will need to be identified for the budget of \$35,790. A breakdown of budget costs is provided in **Attachment 1**.

Communications and Civic Engagement Initiatives

Staff will hold community outreach workshops and programs throughout the growing season to share information with residents about growing edible plants on City lands.

Council Strategic Plan Objectives

Enhancing food security is consistent with the Healthy Communities priority in the 2019-2022 Council Strategic Plan.

Growing in the City | Victoria

Attachment 3 - Get Growing Victoria

Growing in the City

The City supports urban food production on public and private land.

Urban gardening and food production contribute positively to health and well-being, social interaction, connection to nature, and environmental education. They help create healthy and diverse ecosystems while building community and our food security.

Get Growing, Victoria!

Get
Growing,
Victoria!

This free food seedlings distribution program created by the City of Victoria in partnership with community and non-profit organizations supports communities disproportionately impacted by the COVID-19 pandemic.

There is renewed interest in community resilience, food security and learning how to grow food at home.

In April 2020, City Council directed staff to temporarily reprioritize operations in the existing municipal nursery in Beacon Hill Park for the growth and distribution of food starts to be shared over the 2020 growing season.

Over 75,000 edible plant starts are being grown by the City, to be distributed by over 30 community partners who directly serve over 10,000 households of marginalized communities. The first round of 50,000 seedlings supported over 6,000 households facing barriers to fresh food access and garden materials.

Most of our partner organizations are acting as distribution sites for community members to pick up seedlings to be transplanted at home. Some community partners are growing the seedlings in their existing operations to distribute the fresh produce through their programs.

What is being grown?

Growing in the City | Victoria

The seedling varieties were selected for easy growing by the novice gardener, and suitable for a variety of locations, such as garden beds in yards or container gardening on decks and balconies. Local seeds were procured from Southern Vancouver Island farms, and through West Coast Seeds and BC Eco Seed Co-op.

Spring/Summer 2020 Distribution provided 17 vegetable and herbs and included cucumbers, zucchini, squash, cabbage, mizuna and mixed mustard greens, rainbow and eldorado swiss chard, red russian and siberian kale, three different varieties of cherry tomatoes, stupice tomato, parsley, basil and lettuce.

Fall/Winter 2020 Distribution

The Fall/Winter distribution will provide 10 vegetable and herb starts for a selection of hardy greens including lettuce, chard, kale, mustard greens, as well as peas, kohlrabi, purple sprouting broccoli and green onions.

Who is eligible to receive plants?

The project prioritizes support for people who have been disproportionately impacted by the pandemic and want to grow food at home, but that may be facing barriers to access to food plants and garden materials, or are facing barriers to access fresh, locally grown food.

That may include, but is not limited to, those who have experienced loss of work, Indigenous people, people who are immunocompromised, people with disabilities, seniors, at-risk youth, families in need, and/or people who self-identify as food insecure.

How can I receive seedlings?

The Spring/Summer distribution, which ran from May 25 - June 14, 2020, is now complete. The Fall/Winter crop distribution will happen in mid-August. Please contact your local community centre to find out how to register. Plant orders will not be placed in advance. Seedling varieties can be selected by participants on site.

Each location will host the first hour of distribution for seniors and immunocompromised folks only, and after registered participants have received seedlings, the program is open to the wider public.

Greater Victoria School District – partnership with LifeCycles Project Society and Farm to School BC

Families of the Greater Victoria School District were eligible to access free vegetable plants and educational materials, for the seedling Spring/Summer distribution that happened from May 25 to June 11 at four school sites. Over 2,000 families from 47 schools accessed to the seedlings. For more information, see here.

The Food Eco-District – My FED Farm

In partnership with Top Soil Innovative Agriculture, My FED Farm provides free start-up food garden kits to 500 families in need. There are still remaining spots available to get your own micro-garden! To sign up or to find more information, see here.

How do I care for seedlings?

The City has partnered with the Capital Regional Food and Agriculture Initiatives Roundtable (CRFAIR) and its *Growing Together* campaign to offer free educational resources in the form of videos, webinars and access to a new-gardener mentorship program. *Growing Together* shares knowledge from local experts, including site-planning your garden, building healthy soil, companion planting, how to safely transplant seedlings, best watering practices, organic pest management and more.

Growing Food and Gardening in Mixed-Use, Multi-Unit Residential Developments

To encourage urban gardening and food production in mixed-used, multi-unit residential developments, a guide has been developed to offer resources and examples to support the successful and durable incorporation of urban gardening and food production in new and existing developments. The guide also aims to increase awareness about existing good practices and opportunities to innovate. Learn more here.

Boulevard Gardening

Boulevard Gardening Guidelines are designed to help beginners and experts garden on City boulevards more confidently and responsibly. Learn how you can transform the boulevard beside your property into a beautiful and healthy garden. Learn more here.

Community Gardens and Orchards

The Community Gardens Policy encourages local non-profit organizations to establish community allotment gardens, commons gardens and orchards. Find a community garden near you or learn about starting your own. Learn more here.

Urban Food Tree Stewardship Pilot Program

Residents, through a community organization, can apply to plant and maintain up to five fruit and nut trees in a local green space. The City will work with the organization to find suitable locations. Trees must be planted from October to November. Read more about the program [PDF - 388 KB] and apply to become a Food Tree Steward here [PDF - 38 KB].

Rooftop Greenhouses

Rooftop greenhouses can enable year-round local food production in dense urban environments. If you want to build a greenhouse on a rooftop, the Building a Rooftop Greenhouse Fact Sheet [PDF - 611 KB] will help you get started.

Keeping Bees and Hens

The Animal Control Bylaw permits an unspecified number of bee hives and up to 15 female chickens or other poultry. Bee hives, coops and pens of all sizes must be set back from the property line. Check the Zoning Regulation Bylaw to see required setbacks for your zone, at victoria.ca/zoning. For information on good hen-keeping practices, see the Basic Chicken Care manual made available by the City of Vancouver.

Growing Food to Sell

You can grow and sell edible and non-edible products including unprocessed fruits and vegetables, flowers, herbs, fibre, seeds, nuts, seedlings, mushrooms, plant cuttings, eggs and honey. Apply for a business licence to sell products off-site (e.g. in retail stores or restaurants) as well as on-site (e.g. at food stands). Learn more and get started here.

Attachment 6 - Community Garden Guidelines (Draft)

Urban agriculture improves environmental sustainability, contributes to community development, creates positive social interactions, access to fresh food, provides food security, reduces food waste and is part of the City of Port Moody's Parks and Recreation Master Plan. Residents are encouraged to engage in urban agriculture by growing food and non-edible plants throughout the city. This includes growing:

- Grains
- Vegetables
- Mushrooms
- Fruits
- Medicinal herbs
- Ornamental plants

Urban agriculture includes the following activities:

- Collaborative and shared gardening
- Community gardening
- Gardens focused on indigenous people, plants, and knowledge
- Pollinator gardens and infrastructure
- Edible landscaping
- Urban Farming

Community gardens hold an important role within the urban agriculture umbrella. A community garden is a piece of land gardened collectively by a group of people. Each community garden is unique, as each individual brings different skills, talents, and interest to the garden. Generally, the following features are evident within community gardens:

- Managed and maintained through active participation of the gardeners, or non-profit society
- Membership fees support garden maintenance
- Growing food for consumption is encouraged
- Growing food for charitable donations to food banks

The City of Port Moody's Parks Department will collaborate with interested groups in assisting the development of urban agriculture projects if they meet the intent and objectives of this policy and guidelines. The following guidelines set out the requirements for community gardens on City park lands.

Community gardens will be operated by a non-profit society according to the following criteria:

1. The duration of urban agriculture on the site is time-limited, according to the terms of the license agreement. The standard term for the license agreement will be five (5) years, however this will be evaluated with each project and is at the discretion of the Director of Environment and Parks.
2. Grow primarily edible and/or Indigenous plants.
3. Grow plants for the purposes of:
 - project member and community benefit;

Considered at the March 23, 2021 Council meeting

- skills and capacity building; 332
- arts and culture;
- benefitting pollinators;
- donating to charitable causes; and/or
- collaborating with other programs taking place in parks or facilities.

4. Actively encourage and support a diversity of community members (e.g. age, ability, cultural background, etc.) to participate in the garden from conceptual stages through to ongoing operations.

5. Ensure accessibility of garden to people with a variety of abilities.

6. Provide open access to the project at all times; locked barriers are not permitted.

7. Provide signage that includes information about the purpose of the garden, the organisation that sponsors it, how to get involved, and emphasises that the garden is open to all members of the community.

8. Adhere to the City's Bear Management strategy.

9. Operate at no cost to the City. The exception to this is that prior to the first season, City staff may assist with site preparation, the details of which will depend on the type of project. Parks staff will also winterize the water supply in the spring and fall of each year.

Project Location and Approval Process

If the desired location for the community garden or urban agriculture program is on City park land, in order to determine if the location is suitable, the Parks Department will conduct a review based on the following factors:

- Solar access
- Accessibility
- Current and future use
- Water Access
- Size of area
- Community partnership potential
- Neighborhood consultation

If recommended by staff, approval will be granted by the Director of Environment and Parks.

Project Design

In projects where the non-profit organisation is responsible for construction activities, the following must be provided to the Parks Department:

1. A final project design including: all direction received from City staff; the license agreement; and response to feedback received through the consultation, as appropriate. This plan must be approved by the Director of Environment and Parks or designate.
2. An operating plan that describes how the garden will comply with this policy requirements.
3. A construction and operating budget.

Considered at the January 11, 2022 Council meeting

208

Considered at the March 23, 2021 Council meeting

333

4. Proof of two million dollars in liability insurance; liability insurance requirements may be modified at any time at the discretion of the City.
5. A license agreement approved and signed by the non-profit society Board as well as the Director of Environment and Parks or designate.
6. Parks staff will work with society members to respond to any and all issues and complaints in a timely fashion, and in accordance with the license agreement.
7. Society members must provide the City with the following information and documentation on an annual basis:
 - Up to date contact information;
 - Basic project details as requested in a survey (e.g. wait list numbers, any new infrastructure, etc.); and

Proof of insurance (limits and requirements as outlined above).

Who responded:

103 (86.6%) – Live in the Glenayre neighbourhood

16 (13.4%) – Do not live in the Glenayre neighbourhood

Please note

While survey results may provide the City with valuable information, please note the views expressed do not necessarily reflect the views of all Port Moody residents.

Scope of the consultation:

On March 23, 2021, City Council approved a report from the Community Services Department calling for the addition of a community garden at Art Wilkinson Park (492 Glencoe Drive). Council also directed staff to consult with the Glenayre Community Association prior to installing the garden. On April 20, 2021, Council directed staff to conduct community consultation prior to changes to neighbourhood parks and amenity spaces.

On September 20, 2021, City staff launched a consultation to discover if residents of the Glenayre neighbourhood were in favour of adding a new community garden at Art Wilkinson Park. This consultation was facilitated through engage.portmoody.ca, an online platform where participants register to learn about plans and projects, share ideas, and provide feedback.

Key findings:

Survey respondents were asked **“Are you in favour of adding a community garden to Art Wilkinson Park?”**

Common themes in the comments include:

- ▶ A call for community gardens in higher-density neighbourhoods
- ▶ A concern over increased traffic in the Glenayre community
- ▶ A concern over attracting wildlife to the community garden

Proposed Community Garden for Art Wilkinson Park – Comments

Survey respondents who answered "no" to the question "are you in favour of adding a community garden to Art Wilkinson Park" were asked why. Here are the responses received by the City. Comments are presented verbatim, including typos and grammatical errors. Specific addresses have been removed to protect the privacy of individuals.

1. I think most residents have a yard and would have a garden if they wanted. There are no condos except West Hill in the area that probably use the gardens. I think down in West Hill would be a better option and closer for people that would use it. I also think parking and traffic will be an issue as well.
2. We have very limited park space, the city does not control the school grounds. having lived in the area for most of my life i can tell you that area is the only flat are in the park well suited for playing catch, Frisbee whatever. the older kids will use it so they are not too close to the play ground. It is also used for community events like the Easter egg hunt.
3. This is a park in the middle of a single family homes where everyone has large yards, certainly enough room for their own plots. This area is not zoned for redevelopment in the OCP plan. So this means people outside the community will be likely driving into glenayre to use the garden plots. We already have very limited parking at the preschool and school area and very much enough traffic already coming in and out of glenayre to use the trails and drop kids off at schools. I would think there would be many parks in Port Moody better suited near multi family neighbourhoods where they do not have access to outside space. I do not want to see the extra people and the traffic coming into the neighbourhood.
4. We have Single family homes that have enough space for residents to plant their own gardens. Will bring wildlife (bears) to the area where children play at the local pre school. Would be better suited to higher density area where residents don't have the space for gardens.
5. This is a community of single family homes all of which have garden availability. We deal with bear conflict and adding food sources for out of community residents seems incongruent with the bear aware policies we are meant to follow. In addition this is next to a community centre which houses a preschool. This seems to increase both vehicle and bear traffic unnecessarily. Perhaps a community more city Centre with higher density and less single family dwellings makes more sense?
6. After the initial excitement these "gardens" get forgotten and turn to ugly weed collectors.
7. Surrounded by single family homes who can all use either their front or back yards to have gardens.
8. traffic and community centre/park parking concerns
9. Not in favour due to single detached home neighbourhood. Most of the residents of the neighbourhood maintain their own yard and garden and not in need of another plot. This may bring others to our neighbourhood to contribute but the park but itself isn't near a bus route for easy access or near any multi unit buildings who might enjoy it. Better off near closer to a community where there are townhouses/complexes who might lack outside functional space to share with their neighbours as well as accessibility for transit users
10. It would be better to instead populate that area with native plants. We need more naturescaping in the neighbourhood to support pollinators and wildlife, such as birds. This is more so when houses in the neighbourhood mostly have lawns and non-native plants that are not as beneficial to the local ecology and that wildlife in BC are in decline across the board.
11. It would be better to use the area to add more naturescaping. For a park, Art Wilkinson park is not very green; it just has a lot of grass-covered ground. This past summer's heat waves exposed that the park is still lacking in shade, leaving the grass to brown and the park less comfortable. As such heat waves become more likely in the future we're going to need more tree shading in outdoor public areas in the neighbourhood.

Considered at the January 11, 2022 Council meeting

211

12. The Garden is a good idea but the location is not optimal, it will create a traffic bottle neck at a congested area across from a busy elementary school.

13. Extra traffic congestion. Animal attractant (bears, raccoons, coyotes, rodents) . Poorly maintained plots. Water line service.

14. Everyone in this area has yards big enough to accommodate gardens if they wish to do so. A community garden would be much better utilized in an area with condos/townhouses where there is not an option for garden space. Also, being by Bby Mtn., we have more than our fair share of neighbourhood bears, I don't think it's a good idea to have additional attractants by choice. The park is highly utilized by the community, daycare, park users etc. this would probably invite mostly people who do not live in this area, as mentioned it is not needed here, which would increase parking, capacity etc. We have had an increase in crime in this area over the past few years and I wouldn't want to make it easier for would be offenders to have the ability to be inconspicuous under the guise of "here for the community garden." I am in favour of the concept, just not the location.

15. Not easily walkable for the residents that need the plots most... Those in apartments... This will force residents into cars causing more pollution and adding to road congestion. Scarce funding should be used for more appropriate locations

16. Added traffic to the neighbourhood and more attractants for bears.

17. Love community gardens. However it doesn't make sense at glenayre with all SFH around... there's a long hill to the nearest port moody apartments, unless these are open to burquitlam residents. Suggest other locations closer to density (eg along glenayre drive closer to Westhill where the new apartments are going to be built) or down by Henry/at John's where there's a lot more density). A drive-in community (without the anchor of local demand) doesn't set up well for sustained maintenance (won't walk or drive by on a normal basis like other setups by the ice rinks, police station)

18. Anything that brings more traffic to the area is highly unappealing. The community centre is already used for various events/activities, and there is a strong correlation between cars speeding through the neighbourhood, and attendees of the community centre/tennis courts etc. This includes but is not limited to, scouts, daycare users, and organized hockey. Our I has a 30km speed limit due a lack of sidewalks on most streets, which is more often than not, not respected by users of the community centre. I can safely say this as someone who lives within a stones throw from the centre and witnesses excessive speed on a daily basis.

19. Strangers in neighborhood, parking in community center, extra traffic space could be better used for an off lease dog park or leave as is for Everyone to enjoy

20. We have so little park space in our neighbourhood, I don't want to give any up for a community garden. The Art Wilkinson Park is well used by the neighborhood kids and this will take away some of the valuable open space they have to run around, sled, hold neighborhood events etc. I also have traffic concerns and road safety concerns. There are many children walking and biking around here and I worry about adding more cars on the road, particularly with drivers who aren't familiar with the area and won't be as diligent as looking out for kids.

21. I'm sorry to say, I feel like it's a clear bad idea. First of all there is a preschool right there, and not any preschool a outdoor preschool where the kids spend 90% of there time outside. The space isn't really big. And I think it will be so compact and the area will lose its beauty. Also, this is a amazing community where we all help each other and help keep each other safe. Seems odd to have a Community garden that would bring in lots of different strangers and people into our area. Don't get my wrong I LOVE gardens and I think Community gardens are amazing and have huge benefit to many areas in the Tri-Cities. I just feel to have it at this location is not a win. And will benefit people outside the community more then the people living in it. I mean no disrespect to anyone involved or for the gardens. I'm just speaking honestly for me and my family.

22. It is a wonderfully quiet place to be and I think with this many plots going in, it will no longer be that way. I worry about the small amount of parking as well and the privacy of homes that back onto the park. Lastly, I worry the fruits/veggies attracting wildlife which is very close. Thank you for letting us share our concerns.

23. People in Glenayre already have yards to have gardens. This will bring more people into Glenayre, that do not live in Glenayre and take away the area where kids play.

Considered at the January 11, 2022 Council meeting

212

24. Not the right area. The homes in this neighbourhood have gardens already. Will bring too many from outside the neighbourhood into this small space. Already too much traffic. Difficult transit route. Garden space is needed and important but would be better suited in a more central location where the density is higher (condo's apartments) and garden spaces don't already exist

25. It will attract rodents and other animals. It is not a very sunny locations too. The Glenayre neighbours all have yards to grow gardens and people outside this neighbourhood will increase the traffic. The speed limits are already not enforced and additional traffic on top of the school traffic will not be welcomed. And there is no real proximity to transit - the transit in this neighbourhood is inadequate.

26. I don't believe this is the best neighbourhood for a community garden, where most of the people have their own backyard spaces and gardens. I live very close to the proposed area and I worry about the parking issues this will bring at the preschool and in front of my house.

27. Not asked for by the community and overall poor use of city resources. There are lots of gardens already in the neighborhood as the houses are all on property that provides for gardens. These gardens are tempting for rodents and other wildlife. Wildlife from nearby Burnaby Mountain will surely prove to be a challenge.

28. Increased traffic through community and right by an elementary school which already has an issue with traffic, cars speeding and pick up/drop off. This garden is also not on a transit line.

29. The concept of a community garden should provide a place for people who are otherwise unable to have a garden in their own backyard. That neighborhood is a majority of single family detached homes. There is nothing stopping those homeowners from having their own garden. Places such as Suter Brook, Newport Village, Klahanie, and to a lesser extent Strata Developments in Heritage Woods are all areas that would benefit from a Community Garden. I don't see the necessity for a garden being established in that community.

30. We already have congestion with out of catchment French Immersion Parents, Unauthorized suites, AND MANY MANY people coming to park in our neighborhood and head off to Burnaby to hike the trails. Adding more people coming with shovels and rakes in hand to tend their plots will only make our streets worse. Or, more likely, if not managed properly, the plots will be underutilized and just create a weed garden where once there was usable grass.

31. Glenayre Neighbourhood is a community of single family homes on lots with front and back yards that may be used by the residents for gardening. However, the Woodland Park redevelopment will increase the population by 7x in rental apartments and market condos that are not 'ground oriented'. Thus, the need for a generous size community garden is in the Woodland Park community - perhaps in Seaview Park (or within Woodland Park property).

32. In my understanding, community gardens are to be near people who don't have gardens. This location is surrounded by single family homes, all of which have gardens. People using these gardens will most likely have to drive to this location, this is not good for climate change. I also know this location gets very saturated which is not optimal for gardens or for the paths between / near the gardens.

33. The majority of homeowners in this neighborhood have yards large enough that they are capable of growing at home. This location is not serviced by public transit, either. Therefore, anyone likely to be using the community garden would be driving into the neighborhood, adding unnecessary congestion.

34. The park is too visible from the main thorofare to be put to such use

35. Most of the neighbourhood have their own gardens. If a big home is built, the decision was made not to have a garden at all. The preschool and play park is there, and although I'm not suspicious of people by nature, my concern is random people being in the neighbourhood . Parking is already at a premium during busy hours of school pick up and drop off ...and during tennis court use....

Considered at the January 11, 2022 Council meeting

213

36. We in Glenayre all have large amazing yards. We can grow gardens there. Taking up space of a park for the garden is not needed for a garden. We don't need more traffic from outside sources in Glenayre. This will create wildlife into the park. A community garden in time of pandemic with persons gathering is a problem.
-
37. The vast majority of Glenayre residents have yards where they could put in their own garden plot. I feel this garden would be used by people who have to drive here, increasing traffic in the neighbourhood. There are no high density buildings within walking distance of Art Wilkinson Park which is a 15 minute walk from the nearest bus stop. The neighbourhood already deals with extra traffic due to the French immersion school and speeding is always an issue. Many of our streets do not have sidewalks and we rely on our neighbours to drive carefully through the local streets to keep our families and kids safe as they walk in the neighbourhood.
-
38. The parking lot is too small to accommodate the gardeners, the Community Hall and the tennis courts. The park is small for a subdivision of our size and further restrictions on its use are not in our communities best interest.
-
39. All residents here have ample backyard space to have a garden if they wish to do that. Community gardens, as much as it has its advantages can also invite outsiders. The location of the garden also is so secluded and hidden that could just invite abusers and endanger the safety of users. Community garden makes sense to have in residences that do not have access to land, like condos.
-
40. We are a single family neighborhood. We all have yards to garden in. We can actively keep an eye on our produce to make sure it is picked and or cleaned up to eliminate unwanted wildlife from coming into the community. This garden proposal at the community centre will definitely encourage the wildlife to come in and help themselves!
-
41. Residents of Glenayre generally have garden space at their own homes. The neighbourhood is quiet and the park proposed for the garden is on the far side of the neighbourhood entrance, so a garden would encourage people from outside the neighbourhood to be travelling through, and it will make roads busier, and become more difficult to notice when strangers are in the area. Currently it is a tight community where everyone knows everyone else. There is also a lot of wildlife and the park backs onto the Suncor conservation area and is very near Burnaby Mountain, so it may encourage more wildlife to come into the neighbourhood for food. Having more wildlife in the park at the same location as a preschool is not a good idea.
-
42. The areas around us are getting much higher in living density with all the towers, which will bring more traffic, I would like to keep our little corner of heaven as quiet as we realistically can. I also think with us being so close to Burnaby Mountain we get enough wildlife, we don't need to encourage more with additional food being on display.
-
43. The majority of houses in the Glenayre area already have garden spaces for people to grow what they want. It's nice to be able to go sit on the grass at the community center. My kids went to that building for kindergarten the grassy area gave them a place to play. The hill is used extensively during the winter for kids tobogganing. Whoever suggested the idea either doesn't live here or hasn't had kids here
-
44. Every property in Glenayre has enough room in their yards for a garden, even basement suite renters. It's a secluded neighbourhood and not much in the means of foot traffic coming through as a thoroughfare NOT a good location for such plans. It'll become an overgrown jungle that nobody will admit to maintain.
-
45. 1. Glenayre residents have large enough lots to have their own gardens, so I don't believe Glenayre residents would use it.
2. I don't think people will use transit and Glenayre already has a lot of traffic congestion on Glencoe Drive around the Art Wilkinson Park from Monday to Friday because of the many parents driving children to French Immersion.
-
46. Art Wilkinson Park is located in an area of single family homes all with their own yards. The residents have their own gardens and do not need to access a community garden. A high density residential area would be a better location to develop a community garden, such as in the Seaview (Woodlands/Evergreens) and College Park (Westhill/Easthill) areas would be a more appropriate location for a community garden. Art Wilkinson Park is not on a public transit route, which means users will be driving in and out and there are too many vehicles in the neighbourhood already. As well, the parking area of the community centre is not large enough to accommodate many vehicles.

Considered at the January 11, 2022 Council meeting

214

-
47. I understand community gardens are great for dense housing but that so not Glenayre. Glenayre has good sized yards and no need for gardens in a community space. We already have enough traffic with the French immersion parents driving in. This area is also a great spot where people let their dogs run as it is away from the playground and a great long space. This space has also been used for kids playing as well and community event games.
-
48. Homes in this neighbourhood all have yards large enough to make their own garden if desired. Being on the border of Burnaby Mountain, wildlife is a huge part of this neighbourhood, A community garden would bring wildlife , specifically bears, and then in turn complaints that the bears are frequently at the preschool, playground, park making it unsafe for the children/community to use. This park is used year round by the community, especially it's children: the pre-school, community groups, the elementary school. That particular stretch is the only long flat part and kids are often seen playing soccer, playing catch, playing frisbee... The pre-school and summer camp children use this as a safe space to run and play outside, safe off the streets. The whole neighbourhood is there at the first snowflake , sledding, snowball fights, trying out their new skis...
-
49. This area is right beside a preschool. Inviting strangers into the area is not a good idea when there are so many children around. This would add more traffic on Glencoe Drive, which is already busy throughout the day with 2 preschool pick up and drop off times in addition to Glenayre Elementary's. Furthermore, this area does not get a lot of sun due to all of the trees.
-
50. The community needs other things
-
51. It's a limited green space not attached to the school - please leave it !!!
-
52. We have bears in the neighborhood and the out in the open garden being next to a park can potentially be a problem. It would also bring many outsiders into our neighborhood. everyone living here has a back yard for a garden.
-
53. I don't think municipal resources should be used to build a garden in a neighborhood with single family homes that all have their own yards. This money could be better spent building gardens where people live in apartments or townhouses.
-
54. This will bring in additional vehicular traffic in the neighborhood right on front of a school zone, attract bears and other animals right around the school, safety around the elementary school will be compromised, this will invade the privacy of adjacent neighbors and disrupt the neighborhood.
-
55. Area is a house neighborhood with yards to do own garden / community gardens are for high density areas like condos or townhouses with no yard for people ! Also / bears ! Gardens in park will bring bears n raccoons / water restrictions?
-
56. We would prefer to have it as a dog park for residents of Glenayre. We don't want the additional cars coming through the neighborhood. It's busy enough outside of Glenayre we would like to keep our neighborhood nice and quiet. That's why we moved here 29 years ago.
-
57. Attracting Bears etc. to areas where there are kids at play. Not smart at all. Interested to know what City member thought up this bright idea!!! Gardens not being maintained- rotten fruit and Veg etc. Will the City clean?? Close vicinity to mountains where the Bears happily live. The highest/ Strongest fence wont stop them having a snack.. Bears walk through there all the time, plus Deer, and Coyote's...You want the the" so called Conservation officers" more target practices?! All houses in Glenayre have big enough yards to have gardens. Having it in East Hill or that new develop, where they don't have gardens, only common land make more sense. A true community environment. Closer to transit. Not that I can see busing in to use the gardens. (No bus stops in Glenayre)
-
58. Glenayre and neighbouring areas are replete with single family detached homes with yards, many of which have vegetable and flower gardens. Would prefer to see improvements in existing recreation facilities, or insure any garden is lead and managed by Glenayre Elementary with an operating budget, and a commitment of care and a social contract that extends through to include summer months. Community based gardens were attempted within the property of Glenayre elementary school and while our kids were there, they went unused and fell into disrepair. See below for comments please...

Considered at the January 11, 2022 Council meeting

215

59. We (speaking to multiple neighbours) don't feel it is a wise tax payer expenditure nor is it necessary for Glenayre residents -who all have access to personal property/land. These gardens make sense in densified neighborhoods with condos etc. It would simply be a plot of land for non- Glenayre residents to grow produce for profit at Farmers Markets. To be honest it appears to be another attempt by Port Moody to emulate Vancouver when the communities are vastly different. May I refer to the money spent to make Glenayre a signed bike route. It was already the most friendly bike neighbourhood in the lower mainland. Spending \$ for virtue signalling....
-
60. More cars in neighborhood, using parking spaces in community ctr lot, potentially more on street cars parked, gardens attract the many bears in our neighborhood, Glenayre is a "satellite" neighborhood of Port Moody quite "detached" from the community. Folks that live in POMO proper would have a long ride up to Glenayre so expect more car trips vs transit which is not a green way to go at all. Think there could be space in POMO closer to higher density housing for gardens as Gleyayre residents have large yards for gardens so expect community garden to primarily be used by people that do not live in neighbourhood. It would be nice for people to have access to gardens that are in their neighbourhood? Also the bus doesn't come right by Art Wilkinson Park its about a 10 mnt walk from bus stop - and if you take skytrain up the walk from Burquitlam is 3x that long due to the fact that Glenayre is an odd little place which seems more like Coquitlam than POMO.
-
61. Do not need to attract more animals in the area + schools and children playing right there. Traffic and parking around the school is already an issue. Everyone who lives in glenayre has enough space to have their own gardens. No need to host for those outside of our community. Would be better if a community was located close to those it would serve? Like near an apartment and people who don't have garden space? Waste of money.
-
62. Parking is limited already with parents picking school children up morning and afternoon. Bears cone down from the mountain regularly. No need to attract more, especially by an elementary school. If City is allowing the building of tall residential, maybe they should build gardens on the roofs. Glenayre residents have made their own gardens in their own yards. We shouldn't have to accommodate residents that don't even live here!
-
63. If you live in Glenarye, you are privileged to have a large property, most have gardens, and many have taken on huge home gardens since the pandemic hit. We are not falling short on green space in this neighbourhood. Shouldn't these community gardens be placed in areas where there is limited green space ? Such as the Inlet garden down in rocky point where there are apartments and no single family houses? A garden with food attracts animals, this location right by a school and the mountain would be ideal for bears, coyotes or other predators to linger in our very child friendly streets. This is not a good use of this park space, a bigger water park or playground would satisfy our community's needs more then a vegetable garden.
-
64. Additional traffic/speed, extra people outside of neighborhood coming in, rodents/wildlife, park close to the school, community yards are large enough for own gardens we
-
65. Because there will be more traffic and more people- those that do not live in this community and unfortunately people tend to not care when they don't live here... more garbage, litter, speeding...etc
-
66. MOre congested parking and traffic just waiting for an accident to happen with preschool and elementary school,attraction for wildlife ie bears,and locals have their own yards. Better spot is by pool inCollege Park area. Many rentals in that area that would utilize such a garden
-
67. I feel it is to many plots with very limited parking
-
68. I am not in favour for a number of reasons: This will increase traffic into the neighbourhood; affect parking at the community center; have people around the school and center while they are in session; take away space from the children who spend time outside while at preschool; affect community events that are held at the centre; invite more wildlife; and possible vandals.

Considered at the January 11, 2022 Council meeting

216

69. Would I be in favor of destroying what I love about this neighborhood? Absolutely not! It just sickens me to think that someone would believe that a "community garden" in Glenayre Park (I am not even a fan of the Art Wilkinson name) is a good idea and a valuable use of City time and resource. It just absolutely sickens me to the core as someone who grew up in this park. It sickens me that some brain dead myopic twat(s) would even consider this to be a good idea. Quite obviously people have too much time on their hands. The people of Glenayre live on individual lots of land. They are more than capable and even happy to maintain their own gardens. It seems to me that this is an external effort to bring what is not needed, nor wanted, into Glenayre. I just simply cannot believe that this would even be questioned. As it is there are far too many people from outside of Glenayre coming into Glenayre and that alone is destroying the peace and sanity of the neighborhood. Even saying what I have said above I am somehow not surprised. I have witnessed the "eyesore" that is the Community Center in Glenayre Park begin sprawling out with terrible distasteful clutter. It is rather obvious that certain people have been taking it upon themselves to personalise the park to their own personal tastes and desires. It is a park that represents the best of the late 1960's / 1970's; wide open peaceful green spaces. At least it was. It was absolutely perfect just the way it was. This whole neighborhood should have been declared heritage in my view. Heritage. Of the era when Man was King, and the Nuclear Family was at it's PINNACLE at Top of the World. I don't even think most people even comprehend what they are destroying. Which is par for the course these days. It seems the City Police couldn't even figure out that they were assisting outsiders in manipulating an Elderly Citizen into KILL Her Own Son. If you people continue to destroy this area you are simply adding nails to my coffin. Personally that's the last thing I need. I shouldn't even be alive another resident tells me after all the non sensible crap that people from outside of Glenayre have brought into my life inside of Glenayre. I almost feel like everyone is in a mad rush to turn what I know as heaven into hell. Which perhaps is fitting again as the City did tear down the Church in Glenayre to build a nuisance The Community Center does not promote PEACE and HARMONY. Especially when it gets rented out for parties. The "Community Garden" will be no different. Maybe you could all grow pot and have "Community" dope-smoking get togethers? There are 495 houses in Glenayre, at least that's the number at original completion of the neighborhood. There is no need for a "Community Garden", unless you are promoting the idea from OUTSIDE OF GLENAYRE for other purposes. I am aware of some 'initiatives' from elsewhere, but I do not even want to mention them as I am strongly opposed to the idea put forth here.

Survey respondents were asked if they had any additional comments to share on the proposed community garden for Art Wilkinson Park. Here are the responses received by the City. Comments are presented verbatim, including typos and grammatical errors. Specific addresses have been removed to protect the privacy of individuals.

1. All the houses in Glenayre come with enough lawn space for their own gardens. I would much rather have the money spent on revitalizing Art Wilkinson park and tennis courts, the state of both which is embarrassing compared to Port Coquitlam and Coquitlam parks. The >5 structure there has been there at least 25 years and it's chipping away. The tennis court wall looks horrible and needed new paint a decade ago. An updated kids playground and tennis courts would be much more beneficial to residents, then gardens they already have space for at their own houses. Really can't stress enough that an updated playground (like Mundy Park or Riley Park or Como Lake park) is much more needed then garden space.
2. It's a good use of that currently empty space. Most residents of Glenayre will probably continue to garden on their own property, but this would benefit residents in Westhill/Seaview. It's a community builder! Thanks.
3. This is a great initiative but not at the expense of park space that can be used all year round by the whole Neighbourhood. Community garden space at the expense of park space is unacceptable. Look at the garden on the excess lands next to the police station, perfect use of underutilized city property. This garden would not be used by the people who live in Glenayre, it will be used seasonally and only by the 60 or so people who are given plots. I am the local LU Committee member for Glenayre so I reached out to several neighbors. Please note that most were not aware of this proposal. Of the dozen people I spoke to not one was in favour of this. Other concerns were adding bear attractants next to a play ground, eliminating open green space and concerns over upkeep and ongoing costs. To reiterate, good idea but not at the expense of park space. What about the former fire hall site while that sits vacant, it is surrounded by condos? Thank you.

Considered at the January 11, 2022 Council meeting

217

4. Curious what the requirements are to get a spot in the garden? I cant imagine anyone seeking a spot would not need a car to get here. Seems to defeat the purpose of a true community garden. But, we have green space to share, which important for communities

5. Love the idea of communities currently under development having the developers responsible for providing community garden space for the neighbourhood

6. Community Gardens are a great way to help create community, to support the environment and to engage people in learning more about their natural surroundings.

7. This is exactly what we need!!!!

8. This community is quite xenophobic to outsiders and is often opposed to change of any kind, especially when it involves sharing space with others outside this community. Something to keep in mind as you move forwards on this project.

9. West hill park makes more sense

10. Why were the residents of Glenayre not consulted before this stage. How can council consider passing anything without that consultation!!!

11. If still considering the westside of Port Moody, consider westhill or easthill as they have townhouses/apartments, are transit accessible, have plenty of space, is more frequented by residents

12. Terrific idea! Great location for otherwise unused green space.

13. Could the garden be located on Elisa near Glencoe or possibly in the space at the FireHall?

14. No comments, but questions. Who will have access to these community gardens? Will the area be fenced off to prevent vandalism? If people are travelling outside of community to access gardens, why aren't they set up in newly developed complexes to maintain their green space?

15. The old firehall site seems like an excellent location that is not being utilized....

16. I don't see the need to spend money for a community garden since it's a neighbourhood of single family homes so everyone has yard space for veg garden. Unless I'm missing something.

17. This location is not easily accessed by transit, so anyone coming from outside Glenayre wanting to use the gardens will have to walk a fair distance to the garden anyways. Seems not ideal considering people would need to be carrying gardening supplies and/or their crop. People who live in the area have a minimum 6,000sq ft lot with plenty of room for their own gardens if they so choose.

18. This is not a good use of a public space, people who live in Glenayre have plenty of space in their own gardens to grow veggies etc.

19. How would space in the garden be allocated to residents?

20. This is not the right spot for a community garden.

21. Have a garden area in a place closer to people who don't have a backyard. Seems weird to draw in folks into a Community.

22. It's great that people want access to grow food and build community connections. Land is so scarce! With the school and two daycares so close, traffic and parking are a bit of concern to me. I walked there the other day and I can't imagine 60 plots. Can we have some more details? Does 60 plots mean 60 gardeners? Will there be a shed for tools? Will there be a compost pile? Thanks!

Considered at the January 11, 2022 Council meeting

218

23. I think a garden would be great! Most people in our neighbourhood have their own yards, so it would be great to have others that don't have space be able to access the garden. At the same time, it would be great for Glenayre residents to come together at a garden rather than just be in their own yards! I'm a bit concerned about bears in the area, but that's not anything that can't be overcome. Looking forward to a new addition to the neighbourhood :)

24. I can understand the demand with the number of residences without yards that are being created in the city. I am hesitant to have the increased traffic, and potential increase in crime that might accompany this, but also don't want to be a nimbby'ist, so am making some suggestions that might help this move forward. If we're going to have increased traffic from non-residents, I would like more security measures in place, such as motion lighting at night and cameras. With increased traffic, there should be parking upgrades. It is not unusual to have bears in the neighbourhood, so there would need to be garbage management, and wild life attractant management. There are a number of people opposed in the neighbourhood, so there would need to be some concessions to make it a win-win for the neighbourhood. Perhaps a nice walking path through the gardens that are open to the public, workshops that include neighbourhood gardeners, a community day for gardeners & community members to come together.

25. Not a good location for a community garden

26. I propose Westhill area for your consideration

27. We have so many wonderful community events and programs in Glenayre that allow us to mingle and meet others in the neighbourhood. I don't believe this would be the best way to increase a sense of community. I would much rather see improvements to the playground at the park, or to the waterpark.

28. I live close to the Glenayre area. I am always in favour of adding communal outdoor activities.

29. Should locate near higher density housing, as this will be greener, with less transport required, and be more useful to the people that would use the space. There are already parking issues in the immediate area.

30. I like the idea of community gardens but they should be chosen in areas that are more accessible via transit, and in areas where more individuals live that don't have access to their own yards.

31. Great idea! We need more community gardens throughout the city.

32. More gardens everywhere!

33. There is a demonstrated need in Port Moody for the development of more community gardens and access to land for residents to grow their own food. The current police community garden has a waitlist of nearly 100 families. "As more people live in higher density housing, there is an increased importance to strengthen the connections between people and their food systems. With rising food prices, climate change and environmental degradation, it is important to create resilient, bioregional food systems that are fully integrated within the planning, design, function, and economy of communities. Urban agriculture is one way to accomplish that.

34. Even though I do not live in the neighbourhood, I do live in Port Moody. I feel community gardens are extremely important as they foster green spaces, food security and neighbourliness. Also, this new community garden will take some pressure off the 2 other community gardens that are full and have long wait lists.

35. I really like to have a garden plot in this community.

36. Places such as Suter Brook, Newport Village, Klahanie, and to a lesser extent Strata Developments in Heritage Woods are all areas that would benefit from a Community Garden. I don't see the necessity for a garden being established in the Glenayre community.

37. I think the more community gardens we invest in the better our communities are in the long run.

Considered at the January 11, 2022 Council meeting

219

38. Many Port Moody residents who live in condos/townhomes do have access to land to grow their own food, nor can they grow the food in pots on their decks/balconies. There is a high demand for community gardens in the city.
-
39. We need more community gardens
-
40. Who will manage the plots? Who are the users these plots are intended for? Is there a nascent demand for garden plots that people want to commute to? People who live near Glenayre who want to garden have yards to garden in, People who live in Coquitlam Apartments who want to garden probably don't want to travel to Glenayre to use our plots.
-
41. (A) The 14 vehicle stall parking lot at the Glenayre Community Centre is used by parents dropping and picking up students at Glenayre Elementary School and pickleball players (often a dozen at a time). Adding community gardeners to the parking demand may create congestion and inconvenience. (B) Gardening will be impossible without a connection to the municipal water main. (C) A Port-A-Potty will have to be provided for the convenience of gardeners as the washrooms in the Community Centre are not available. [Of course, this sanitary facility has been needed for years to serve the tennis, ball hockey, and pickleball players.]
-
42. I would recommend these community gardens be at/near Westhill park. Possibly near the pool. Very close to Westhill is an apartment complex, all of who do not have a nice garden. I would recommend these community gardens be near one of the new residential towers going up in Port Moody, or near apartment / townhouse complexes. Thanks!
-
43. I am on favour of this idea, however I feel that it would be better served with a location nearer to an area with predominantly condominiums or apartments and not Art Wilkinson Park
-
44. There is a park area behind the Glenayre "tennis courts" which could be put to such a use and would be unobtrusive.
-
45. Just leave the park as is. Glenayre does not need a community garden. We have yards.
-
46. Great Idea. What kind of lighting will be available for tending the garden after work in the fall?
-
47. I find it interesting that I received the email for this survey on the Thursday before a long weekend and you want replies by Monday, October 11 which is the Thanksgiving holiday. I think people need to be given at least 2 weeks to reply in case they are away on holidays visiting family over the Thanksgiving weekend. I have previously completed a survey on the Engage Port Moody site and did not get any notification about this survey from that site. I received this through our Glenayre Community Association. I get the feeling you are trying to rush this through without giving the community sufficient time to respond.
-
48. No
-
49. If you really need to have one, there should be a process in vetting the users of the plots, whether be residents only or sponsored by a Glenayre resident. And also, if the reason for joining is more for economical reason in addition to community. Another option to promote food sustainability is having an open market wherein gardeners in the neighborhood could always share the crops of their backyard garden, sort of Open market maybe sponsored by the city.
-
50. It would be good to offer composting and fencing options for the site, as otherwise it may attract wildlife.
-
51. A community garden would be much better situated in high density areas where people may not have access to their own gardens, such as the Burquitlam area.
-
52. Every property in Glenayre has enough room in their yards for a garden, even basement suite renters. It's a secluded neighbourhood and not much in the means of foot traffic coming through as a thoroughfare NOT a good location for such plans. It'll become an overgrown jungle that nobody will admit to maintain.
-
53. An area that is on a bus route, and is located in a region of higher density residential zoning, such as the Evergreens/ Woodlands area in the Seaview community or Westhill/East Hill areas in College Park would be a more appropriate area for a community garden.

Considered at the January 11, 2022 Council meeting

220

-
54. Seems like a large number of plots. Maybe start slightly smaller? It's a quiet park. Busy mostly with the court area and at school pick up and drop off. Overall; an interesting and fun idea for residents: I'm guessing most who would take part don't live in the area since our garden area at each house is substantial.
-
55. Inviting strangers into a community where there are an abundance of children seems like a terrible idea.
-
56. no
-
57. The space would better served with something else
-
58. Leaving this as green space does not limit its potential uses. We have considerable bear and wildlife in this area - with a garden it is further attractants along with this is being a heavy child/family traffic area. Too much added potential for even more human/bear conflict.
-
59. Big demand. Good to add more plots around the city where possible.
-
60. This location is in no way considered close to transit. Most people will be coming in by cars to this location. It is quite a walk from the community bus shuttle to this location. This is a bear friendly neighborhood, and having a community garden so close to their natural habitat calls for unnecessary confrontations. Bears will be killed unnecessarily and kids might be hurt.
-
61. Put community gardens in high density areas
-
62. A community garden would be good for neighbours from outside Glenayre. Most Glenayre homes have land to their own gardens and even to share. However it will be good for the community. I wish Wilkinson Park has also more picnic tables and washrooms so families can visit the garden and have a good time there.
-
63. Most Glenayre residents have space to garden in their yards. For this or any community garden, I'd want the city to prioritize ease of access for those with limited access to fresh produce. Also, although I welcome this new use of park space, drivers exceeding speed limits on Glencoe Dr are already a problem. Could traffic slowing measures like more speed bumps be considered if the park will have more users?
-
64. Enough said. Not thought through. Tax payers money spent on this report!!! Try focusing on transportation..
-
65. I would love if the community garden engaged with the preschool beside the purposed site.
-
66. It would be wonderful to see agriculture and gardening introduced into the curriculum for the kids in school, to learn the values a related to growing one's own food crops/vegetables. Critical consideration - bear and other wildlife support programs. Additional food sources with lack of management may lead to further "conservation" action... it just hurts to continue to put these creatures further into harms way by competing for food with humans. Love the idea of community vegetable gardens where high density residents can walk to and attend, while maintaining the biophilic qualities of a earthen vibrant green patch beneath a skytrain section, adjacent rail tracks or on a plot next to PM firehall #1.
-
67. I think this is a terrible idea. The glenayre community association has already shared their feelings on this as well. Also, why is all of Port Moody voting on this survey when it doesn't necessarily affect them? The glenayre community residents should have ALL been asked their opinion. Not just have a general survey posted where not everyone can have a fair chance to vote.
-
68. Glenayre is a Small community with only 2 exits! Too many school children in area! Parking and traffic bad as is!
-
69. We do NOT want this in our neighborhood. If this a community garden then it should only be for the people in the glenayre community and it is unnecessary as we already have yards large enough.

Considered at the January 11, 2022 Council meeting

221

70. Not sure it makes sense to have one in this neighborhood as most people who live here have big gardens already so people would have to commute into the neighborhood in order to use it. Would it not make more sense for a higher density area where there are condos and apartments who could really use. It would bring in more traffic to an already overwhelmed school zone. Not to mention the deer in the area would get blamed for eating whatever is grown

71. This is a good area to locate the garden as it is currently underused

72. There should be hours of use posted in consideration of the nearby residents.

73. Those that live here do not need this as we all have yards of our own...

74. I cannot emphasize enough that the congestion and parking right now is horrific considering the tennis courts, preschool, elementary school and Parks and Rec programs going on now. I cannot even think of what it would be like if this project goes thru here

75. Designate it as HERITAGE and lock it down. No Changes. It is a MUSEUM about a time when life was Great, and the Future was Wide-Open.

76. Residents of Glenayre generally have enough lot space to have a garden in their own backyard if they chose. Community gardens should be built in easily accessible places for residents that don't have space for a garden (eg condos). I would like to add that I am very disappointed that the City did not engage the Glenayre community when this was first presented to council and has now put pressure on residents to respond in a very short time frame.
