382

City of Port Moody Report/Recommendation to Council

Date: October 25, 2021

Submitted by: Community Development Department - Development Planning Division

Subject: Rezoning (Multi-Family) – 148 and 154 James Road (Laidler)

Purpose

To present for Council consideration Zoning Amendment Bylaw, No. 3332 to facilitate the redevelopment of two properties on James Road.

Recommended Resolution(s)

THAT City of Port Moody Zoning Bylaw, 2018, No. 2937, Amendment Bylaw No. 63, 2021, No. 3332 (148 and 154 James Road) (CD87) be read a first and second time as recommended in the report dated October 25, 2021 from the Community Development Department – Development Planning Division regarding Rezoning (Multi-Family) – 148 and 154 James Road (Laidler);

AND THAT Bylaw No. 3332 be referred to a Public Hearing to be held once a public information meeting on the current proposal has been completed by the applicant.

Background

At the April 20, 2021 Committee of the Whole meeting, Council gave first reading to rezoning Bylaw for 148-154 James Road. However, at the April 27, 2021 Regular Council meeting, Council did not ratify the resolution and subsequently defeated first reading. The applicant has now submitted a new proposal, which provides for a larger proportion of two- and three-bedroom units. Since the previous rezoning Bylaw was defeated, a new draft rezoning Bylaw is being presented with this report (Attachment 1). A copy of the staff report (dated March 15, 2021) considered at the April 20, 2021 Council meeting is included as Attachment 2.

Key Changes by Applicant

The applicant has made substantial changes to the application based on the feedback provided at the April 20, 2021 Committee of the Whole meeting. The key changes are outlined below:

383

Key Items	Previous Proposal	Current Proposal
Number of units	• 111	• 88
Density	• 3.08	• 3.13
Unit mix	57 micro dwelling units 49 one-bedroom units 5 two-bedroom units 0 three-bedroom units	35 studio units 29 one-bedroom units 19 two-bedroom units 5 three-bedroom units Note: Micro dwellings have been replaced with
		studio units with an increased minimum unit size from 28m² (299ft²) to 37m² (401ft²).
Affordable housing	15% of the units available for rent-to-own	 15% of the units rented at 15% below market rental rates for a period of 10 years Pre-release of the units to
		Port Moody residents and workers
Parking Reduction	• 38%	• 23%
Accessibility	11 fully accessible units	45 adaptable units as per Zoning Bylaw 3 "universal" units Note: Universal units are not defined in the BC
Driveto Amenito	050/ -645	Building Code.
Private Amenity Space	 95% of the units with private outdoor space 	 100% of the units with private outdoor space

Discussion

Property Description

The development site is located at the south end of James Road and east of Moody Middle School, as shown on the Location Map (Attachment 3). The total development site is approximately 1,670m² (0.41ac) in size and gently slopes upwards from the north to the south with a 3.5m (11.5ft) change in elevation. The subject lots are each currently occupied with a single-family dwelling.

The Application Fact Sheet (Attachment 4) outlines highlights of the project, and separate maps show the current OCP Land Use and Zoning designations, and the neighbourhood context (Attachment 5 and 6).

Development Proposal Description:

Unit Mix

A change to the unit mix is being proposed by reducing the overall number of units and increasing the number of family-friendly homes. This change also resulted in an increase to the smallest unit size to an average of $38m^2$ ($412ft^2$) instead of $33m^2$ ($351ft^2$). As a result of the increased sizes, the units are large enough to be considered conventional studio units instead of micro-dwellings. While the total floor area of the building is similar to the previous proposal, the revised plans reduce the overall number of units by 21% by:

- reducing the number of micro-dwelling (studio) units from 57 to 35;
- reducing the number of one-bedroom units from 49 to 29;
- increasing the number of two-bedroom units from five to 19; and
- increasing the number of three-bedroom units from zero to five.

384

The unit mix is detailed in the following table:

Unit Type	Unit Count	Percentage of Overall Units	Size Range	Average Unit Size
Studio	35	40%	37m ² (401ft ²) to 42m ² (456ft ²)	38m² (412ft²)
One-Bedroom	29	33%	38m² (405ft²) to 66m² (708ft²)	48m² (517ft²)
Two-Bedroom	19	22%	71m ² (760ft ²) to 98m ² (1,058ft ²)	78m² (844ft²)
Three-Bedroom	5	6%	79m² (848ft²)	79m² (848ft²)
TOTAL	88			-

Affordable Housing Options

The application previously proposed 15% of the units to be available under a rent-to-own program. This program has been replaced with 15% of the units to be available at 15% below-market rental rates for a period of 10 years. While the inclusion of affordable rental housing should be commended, staff have reminded the applicant that the Interim Affordable Housing Guidelines Policy suggests that affordable rental rates be secured for a minimum of 60 years. Staff recommend that if Council gives this application first and second reading that the below-market rental time period be increased to 60 years as stated in the interim affordable housing guidelines.

In addition to the below-market rental units, the applicant has indicated that all units will be available first to Port Moody residents or workers.

Density

The reduction in the total number of units has resulted in additional patio space. Consequently, some of the patio spaces have been converted to floor area, resulting in a slight increase to the proposed floor area ratio (FAR) from 3.08 to 3.13.

Parking

The previous proposal requested a 38% reduction to the parking requirements. While the number of units have been decreased, the underground parking structure being proposed is similar. As a result, the proposal is now requesting an overall parking reduction of 23%. Based on the Transit Oriented Development (TOD) measures being provided, staff support a lower parking rate for all studio units, two- and three-bedroom units, and affordable rental units, which leaves a 7% difference to be addressed through the proposed Transportation Demand Management (TDM) package.

Overall, this project will provide a total of 88 parking spaces, recommended in the most recent follow-up Parking Study by Watt Consulting, including 80 residential spaces and eight visitor spaces.

Accessibility

The previous proposal provided 11 fully accessible units per the *BC Building Code*. All accessible units have been removed from the project, which is now proposing 50% of units (44 units) to be adaptable, meeting the Zoning Bylaw requirement.

385

Revised project plans are included as **Attachment 7** and landscape plans are included as **Attachment 8**.

Sustainability Report Card

The updated Sustainability Report Card for the development proposal is included as Attachment 9 and the following table summarizes the scoring at this point in the process.

Sustainability Pillar Application	Cultural	Economic	Environmental	Social	Overall Total
148-154 James	73%	71%	51%	66%	59%
Road	(8 out of 11)	(5 out of 7)	(27 out of 53)	(23 out of 35)	

Other Option(s)

If Council determines that changes are needed before the project proceeds to the next steps, staff recommend that the Bylaw be given first reading only and the project be referred back to staff and applicant to consider specific changes.

Financial Implications

Community Amenity Contributions (CACs)

The CAC amount will be established at the development permit stage once the final residential floor area is confirmed and prior to the adoption of the rezoning Bylaw. CACs are collected up to an FAR of 2.5. Based on the proposed residential floor area up to an FAR of 2.5, the contribution would be approximately of \$257,520 after a credit of \$12,000 for the existing parent parcels. Of that total, approximately \$85,840 would be directed to the Affordable Housing Reserve Fund and the remaining \$171,680 would go towards general community amenities.

Any floor area above an FAR of 2.5 requires a density bonus payment, which is outlined in the section below.

Density Bonus

The Zoning Bylaw makes provision for bonus density where an FAR greater than 2.5 is being proposed. In this case, the Bylaw stipulates that a financial contribution for community amenities equivalent to 75% of the land value of the additional density above an FAR of 2.5 is required. For the density bonus calculation, floor areas for commercial and below-market housing are excluded. In this case, a payment of 75% of the land value of an additional 0.63 FAR (less below-market housing) would be required. The exact amount will be determined for payment prior to adoption of the zoning amendment Bylaw.

Public Art Contributions

The applicant has committed to providing a contribution to the Public Art Reserve Fund, which will be based on 0.5% of the cost of construction in accordance with the Public Art Policy. Based on a construction cost estimate of approximately \$11,000,000 by the applicant, the contribution would be \$55,000.

386

Communications and Civic Engagement Initiatives

Community Input

This application is being brought forward to Council under section 13.2 of the Development Approval and Procedures Bylaw, which permits an extension to a previously defeated Bylaw and application. As such, the earlier iteration of the proposal was reviewed by the Community Planning Advisory Committee (now replaced by Land Use Committee and Advisory Design Panel) and a public information meeting was held by the applicant, the details of which are both in the previous Council report (Attachment 2).

As the project has changed considerably, a second public information meeting to be held by the applicant will be required prior to the Public Hearing, as recommended in this report. Moreover, given the changes to the proposed land use and to the building design, Council may opt to refer the proposal to Land Use Committee and/or Advisory Design Panel for review.

Public Notification

A new notification sign informing the public of the rezoning application has been placed on the subject site in accordance with City of Port Moody Development Approval Procedures Bylaw, 2011, No. 2918.

Should the rezoning application be given first and second readings, the public will have an opportunity to comment at the Public Hearing, which will occur following a mail-out notification to adjacent residents, an advertisement placed in the local newspaper, and a decal of the public hearing time and date placed on the notification sign.

Council Strategic Plan Objectives

The consideration of the proposal is consistent with the goals of Council's 2019-2022 Strategic Plan related to a Healthy City by planning for a variety of housing types to meet community needs.

City of Port Moody

Bylaw No. 3332

A Bylaw to amend City of Port Moody Zoning Bylaw, 2018, No. 2937 to facilitate the development of a six-storey residential apartment building at 148 and 154 James Road.

The Council of the City of Port Moody enacts as follows:

Citation

1.1 This Bylaw may be cited as "City of Port Moody Zoning Bylaw, 2018, No. 2937, Amendment Bylaw No. 63, 2021, No. 3332 (148 and 154 James Road) (CD87)".

Amendments

2.1 City of Port Moody Zoning Bylaw, 2018, No. 2937 is amended by rezoning the following lands from Single Detached Residential (RS1) to Comprehensive Development Zone 87 (CD87):

Lot 57 District Lot 190 Group 1 New Westminster District Plan 32978 PID: 000-852-996; and

Lot 58 District Lot 190 Group 1 New Westminster District Plan 32978 PID: 006-760-104.

as shown on the location map in Schedule A of this Bylaw.

2.2 City of Port Moody Zoning Bylaw, 2018, No. 2937 is further amended by adding the following section CD87 to Schedule D:

"CD87. Comprehensive Development Zone (CD87)

CD87.1 Intent

The intent of this zone is to facilitate development of a six-storey residential apartment building containing a maximum of 88 units.

EDMS#550982

CD87.2 Permitted Uses

The following uses are permitted in the CD87 Zone:

- a) Principal Use
 - Apartment.
- b) Secondary Use
 - Home Occupation Type A; and
 - (2) Community Care.

CD87.3 Floor Area Ratio (FAR)

The maximum permitted Floor Area Ratio in the CD87 Zone shall not exceed 3.13.

CD87.4 Lot Coverage

The maximum permitted Lot Coverage is 57%.

CD87.5 Building Height

Buildings in the CD87 Zone shall not exceed six storeys and 21.5m, whichever is less.

CD87.6 Setbacks

Minimum setbacks in the CD87 Zone shall be in accordance with the following:

> Front Lot Line: 5.5m Side Lot Line: 3.0m Rear Lot Line: 4.5m.

CD87.7 Parking

- CD87.7.1 A total of 88 Parking Spaces in the CD87 Zone shall be provided with the following allocations:
 - a) 80 residential spaces; and
 - b) 8 visitor spaces.
- CD87.7.2 A maximum of 34 parking spaces may be small car spaces
- CD87.7.3 A minimum of 3 accessible paring spaces are required.
- CD87.7.4 A total of 129 long-term bicycle parking spaces in the CD87 Zone shall be provided, including 38 long-term electric bike parking spaces and 10 long-term electric bike-share parking spaces.

390

CD87.7.5 A total of 3 mobility scooter parking spaces in the CD87

Zone shall be provided

CD87.8 Landscaping

Refer to section 5.2.10 of this Bylaw for landscaping requirements.

CD87.9 Common Amenity Space

Indoor and outdoor Common Amenity Space in the CD87 Zone shall be in accordance with the following:

- (a) The minimum amount of indoor amenity area is 242m2; and
- (b) The minimum amount of outdoor amenity area is 273m2.

Attachments and Schedules

- 3.1 The following schedules are attached to and form part of this Bylaw:
 - Schedule A Location Map.

Severability

Corporate Officer

Considered at the April 20, 2021 Council meeting

City of Port Moody Report/Recommendation to Council

Date: March 15, 2021

Submitted by: Community Development Department - Development Planning Division

Subject: Multi-Family – Rezoning – 148-154 James Road (Laidler)

Purpose

To present for Council consideration a proposed rezoning to facilitate a 111-unit apartment building.

Recommended Resolution(s)

THAT City of Port Moody Zoning Bylaw, 2018, No. 2937, Amendment Bylaw No. 53, 2021, No. 3308 (148 and 154 James Road) (CD84) be read a first time as recommended in the report dated March 15, 2021 from the Community Development Department – Development Planning Division regarding Multi-Family – Rezoning – 148-154 James Road (Laidler).

AND THAT Bylaw No. 3308 be read a second time;

AND THAT Bylaw No. 3308 be referred to a Public Hearing.

Executive Summary

Bill Laidler, on behalf of Dulex Sitka House Development Ltd., has submitted a rezoning application for two properties located at 148-154 James Road. The application proposes a six-storey apartment building containing 111 residential units including 57 micro dwelling, 49 one-bedroom, and five two-bedroom units. While no rental units are being offered with this proposal, the smaller sized units are intended to provide for affordable home ownership. The development does propose to apply a rent-to-own program for 15% of the units, and to construct 10% of the units as fully accessible per the BC Building Code. The development would include four separate indoor amenity rooms, and a rooftop patio space as common areas.

The City does not have guidelines pertaining to micro-dwelling units, but the application has positive merits as described in the report. Therefore, staff are recommending first and second readings of the proposed bylaw and a public hearing to receive input.

393

Considered at the April 20, 2021 Council meeting

234

Background

This application was originally submitted to the City on August 9, 2019, but has been modified substantially by the applicant in February 2020.

Council provided early input on the current proposal at the March 17, 2020 Committee of the Whole meeting, which proposed 114 units with 109 units being micro dwellings or one-bedroom units. Key discussions between staff and applicant over the past year focussed on Council's input and the provision of micro dwelling units, unit density, a substantial parking variance, and the location of the proposal. An Application Fact Sheet is included as **Attachment 1** and a draft rezoning Bylaw No. 3308 is included as **Attachment 2**.

Key Changes by Applicant

The applicant has made several changes to the application based on the input provided by Council, staff, the Community Planning Advisory Committee (CPAC), and the public, including the following:

- · Reduced number of units by three (from 114 to 111);
- Increase of parking spaces from 70 (59 residential, 11 visitor) to 84 (73 residential, 11 visitor);
- Addition of 57 long-term e-bike charging facilities;
- Addition of 11 mobility scooter parking spaces;
- Addition of a 300m² (3,234ft²) common rooftop amenity space;
- Addition of six private rooftop decks ranging from approximately 39m² (416ft²) to 61m² (652ft²) for five sixth-floor units;
- Increase in indoor amenity space from 197m² (2,116ft²) to 242m² 2,606ft²;
- · Addition of a pet washing station;
- Addition of bike maintenance facility;
- Modification of the housing component; the previously proposed affordable home
 ownership program included 11 affordable rental units reserved for persons earning less
 than \$51,000 per year, 11 strata units reserved for persons earning less than \$51,000
 per year, and 11 market rental units. This program has been replaced with 15% of the
 units (17 total units) to be available for a "rent-to-own" program. Qualified applicants will
 be registered for a draw and the remaining units would be sold at market values;
- Modification of a public art piece of a seal to be replaced with cash-in-lieu to the City's Public Art Reserve Fund per the Public Art policy;
- Modification of a dedicated car share for the building to one car share vehicle provided on the City right-of-way for the public; and
- Removal of the donation of one residential unit to a non-profit group.

Micro Dwelling Design

The City of Port Moody has minimal examples of micro dwelling units and therefore, there are no established minimum unit sizes or design guidelines for this concept. However, the City of Vancouver has published Micro Dwellings Policies and Guidelines (Attachment 3), which applies to self-contained units smaller than 30m² (320ft²). While this document is intended for rental units, the applicant is proposing a strata building with market ownership that follows this concept. That said, these policies and guidelines ensure that the suites provide a livable

394

Considered at the April 20, 2021 Council meeting

235

environment regardless of housing tenure. Although the majority of the 59 units identified as micro dwellings in this proposal are larger than Vancouver's definition for micro dwellings, it is a useful reference document as the design guidelines are still relevant for the project.

The City of Vancouver's Micro Dwellings Policies and Guidelines has been taken into consideration by the applicant and adjustments to the units have been made to address the relevant design guidelines including the following:

- Guideline: Units located in buildings that include a variety of unit sizes and located in close proximity to open green space, commercial, and community and recreational facilities.
 - How applied: the proposal is close to open green space and outdoor recreation, but limited in commercial and community facilities.
- Guideline: Opportunities for higher ceilings to mitigate areas of the unit that have limited access to daylight.
 - How applied: units are designed with a 9ft ceiling height versus a standard 8ft ceiling height.
- Guidleine: Consideration of open residential balconies or sundecks.
 - How applied: a rooftop amenity space is being proposed, and 106 of 111 units include a private balcony.
- Guideline: a minimum of two operable vents placed as far apart as possible, to facilitate good airflow.
 - How applied: ventilation for each unit will be designed to meet the BC Building Code.
- Guideline: a minimum dimension of the main living/sleeping space of 3m (9.8ft).
 - How applied: unit layouts have been revised to address this guideline.
- Guideline: consideration of storage space, with preference for in-suite open and closed shelving units and loft areas, in addition to consideration of accessible and secure storage lockers located outside the unit.
 - How applied: inclusion of closet shelving units and increased closet space will be considered, and vertical steel mesh bike lockers will be offered as an option for those that require storage lockers.

Discussion

Property Description

The development site is located at the south end of James Road and east of Moody Middle School, as shown on the Location Plan (Attachment 4). The total development site is approximately 1,670m² (0.41ac) in size and gently slopes upwards from the north to the south with a 3.5m (11.5ft) change in elevation. The subject lots are currently occupied, each with a single family dwelling.

Neighbourhood Context

Surrounding development mainly consists of the following:

 North: Single Detached Residential (RS1) lot. The site is developed with a single family home but designated for multi-family residential uses;

395

Considered at the April 20, 2021 Council meeting

236

- East: Low Density Townhouse Residential (RM3) lot. The site is developed with a 52-unit townhouse complex owned by Metro Vancouver Housing (Moray Place). The townhouses are two storeys in height and provide non-market rental housing;
- South: Low Density Townhouse Residential (RM3) lot. The site is developed with a 50-unit three-storey townhouse strata development (Tall Tree Estates); and
- West: Moody Middle School zoned Civic Service (P1).

The subject site is approximately a 370m walk to access eastbound bus service on St. Johns Street and 480m for westbound service. The site is also located in between SkyTrain Stations, approximately 900m from Inlet Centre Station and 935m to Moody Centre Station walking distance. This equates to a 12- and 13-minute walk to each station, respectively.

Land Use Policy

Official Community Plan (OCP):

The OCP designates the subject lands as Multi-Family Residential, which permits residential development ranging from three to six storeys in height.

The site is located within Development Permit Area 1: Neighbourhood Residential, which regulates the form and character of multi-family residential developments. The site is also located within Development Permit Area 5: Hazardous Conditions due to the existence of the potential for soil liquefaction.

Zoning:

The subject lots are presently zoned Single Detached Residential (RS1).

The OCP and Zoning designation maps are included as Attachment 5 and Attachment 6.

Proposal

The applicant is proposing to rezone the subject site from RS1 to a Comprehensive Development (CD) Zone (Attachment 2). The development is described by the applicant as creating affordable ownership through a multi-generation housing community which features mostly micro dwellings in the form of smaller studio and one-bedroom units. The small unit sizes are intended to make them more affordable.

The development proposal consists of a six-storey residential building containing 111 units over a two-level underground parkade. The building features 11 fully accessible units, a large rooftop amenity space (approximately 3,200ft²), common indoor amenity spaces on four of the six floors, and private outdoor amenity spaces for 106 of 111 units. In addition, there is ample bicycle parking, dedicated mobility scooter parking, and dedicated spaces for bike maintenance and pet washing.

Project and landscape plans are included as Attachment 7 and Attachment 8.

396

Considered at the April 20, 2021 Council meeting

237

Unit Mix

The unit mix ranges from micro dwelling units to two-bedroom units with the following breakdown:

Unit Type	Unit Count	Percentage of Overall Units	Size Range	Average Unit Size
Micro Dwellings	57	51%	28m² - 36m² (300ft² - 392ft²)	33m ² (351ft ²)
One-Bedroom	49	44%	36m ² - 60m ² (391ft ² - 651ft ²)	45m ² (487ft ²)
Two-Bedroom	5	4.5%	60m ² - 89m ² (644ft ² - 935ft ²)	73m ² (791ft ²)

Accessible Units

The development proposal provides 48 adaptable units plus 11 accessible units with accessible features such as wider hallways and bathrooms for wheelchairs, a walk-in bathtub, and lower set kitchen counter. The 59 units (53%) that are either adaptable or accessible exceeds the Zoning Bylaw requirement of 50% of single-storey units to be adaptable.

Rent-to-own Units

The application is exempt from the Interim Affordable Housing Guidelines Policy as it was submitted prior to the policy's approval. However, based on previous approvals, it was communicated to the applicant that an affordable housing component is expected where additional density is being sought. In this case, the applicant is proposing 17 units (15% of the total) as rent-to-own, similar to other development projects within Port Moody. The total amount paid in rent will be allocated towards the down payment for a total of two years. Of the 17 units selected for this program, 12 micro dwelling units and five one-bedroom units will be available.

Amenity Spaces

As many of the units are small in size, the developer is proposing dedicated private outdoor amenity space for 95.5% of the units in the development. Six sixth-floor units also have access to large private rooftop patios.

The development also provides common indoor and outdoor amenity spaces. This includes indoor common amenity rooms on levels two to five with a variety of programming such as a gym, library/computer workstations/gaming station, and a meeting room/flex space. The indoor amenity space totals 242m² (2,606ft²), averages approximately 61m² (653ft²) for each room, and includes a small outdoor balcony space. To complete the outdoor amenity space, a large rooftop patio is proposed, 300m² (3,234ft²) in size. The combined amount of indoor and outdoor amenity space is 5m² (54ft²) per dwelling unit, which goes beyond the RM8 Zone requirement of 3.0m² (32ft²) per dwelling unit.

397

Considered at the April 20, 2021 Council meeting

238

Zoning Compliance

The proposal has a floor area ratio (FAR), of 3.08. Due to the higher FAR, a CD Zone being sought is based on the conventional Six-Storey Apartment Residential (RM8) Zone, which permits a maximum FAR of 2.4. In addition to the increase in density when compared to the RM8 Zone, the proposed CD Zone also reduces the parking requirements by approximately 37%. Based on the plans that were submitted, all other aspects of the CD Zone are aligned with the RM8 Zone. A summary of the CD Zone regulations that require a variance when compared to the RM8 Zone is seen below:

Zoning Comparis		son
	Proposed CD Zone	RM8 Zone
Density (FAR)	3.08	2.4
Parking	84 parking spaces (73 residential, 11 visitor)	135 parking spaces (113 residential, 22 visitor)

While the project would provide a total of 84 parking spaces for 111 residential units, the project plans show four accessible residential parking spaces for the building, which includes 11 accessible residential units. The four accessible parking spaces meet the Zoning Bylaw based on the number of parking spaces that are required under the bylaw. Although there are 11 accessible units, the shortfall of accessible parking spaces is being supplemented by providing 11 dedicated mobility scooter parking spaces.

Parking Variance

The project proposes a parking reduction of approximately 38%. The reduction in parking is supported by a Parking Study from Watt Consulting Group (Attachment 9). The development proposes an 84-stall underground parkade, which requires a reduction of 51 stalls from the required 135 based upon the bylaw requirement. The reduced parking rate was calculated using proposed parking rates for "micro dwellings," which are not currently included in the Zoning Bylaw, as well as the provision of Transportation Demand Management (TDM) measures. While the Zoning Bylaw requires one parking space per one-bedroom or studio unit, the parking study recommends a parking rate of 0.45 spaces per micro dwelling. Measures to support the micro dwelling parking rate and TDM measures for a general parking reduction are listed below.

Measures to Support Micro Dwelling Parking Rate of 0.45 Per Unit

- i. Extend multi-use pathway to St. Johns Street along the west side of James Road.
- Provide an additional 31% long-term bicycle parking.
- iii. Provide 57 long-term electric bicycle (e-bike) charging stations.
- iv. Provide nine shared e-bikes.
- Provide 11 mobility scooter parking stalls.

TDM Measures to Support Parking Reduction

- i. Provide a bicycle maintenance facility.
- ii. Provide a "Transportation Welcome Package."
- iii. Provide one on-street car share stall.

Considered at the April 20, 2021 Council meeting

239

Parking Reduction Calculation

The table below shows the bylaw requirements and the subsequent reductions in parking due to the reduced micro dwelling parking rate and TDM measures. Note that the micro dwellings and the rent-to-own units have been separated for the purpose of the calculation. Based on the review of the parking study, as well as the consideration for accessibility to amenities and transit, staff support the proposed parking reduction.

	Parking	Requirer	nents a	nd Reducti	ion Calc	ulations	
Unit Type	Units	Byla Require		Micro Do		TDM Measures App	lied
Sinc Type	- Cilito	Per unit	Total	Per unit	Total	TDM	Total
1-Bedroom	44	1	44	1	44	Bike Maintenance	40
1-Bdrm Rent-to-own	5	1	5	1	5	Facility	5
2-Bedroom	5	1.5	7	1.5	7	Transportation	6
Micro Dwelling	45	1	45	0.45	20	Welcome Package One (1) Car Share	18
Micro Rent-to-own	12	1	12	0.45	5	Stall – On Street	5
Visitor	111	0.2	22	0.1	11		10
Total			135		92	-9%	84

Frontage and Off-Site Improvements

In addition to meeting the servicing standards outlined in the City of Port Moody Subdivision and Development Servicing Bylaw (SDSB) 2010, No. 2831, the applicant is required and has agreed to address the following requirements:

- Installation of a full traffic signal at the St. Johns Street and James Road intersection.
 The applicant will be responsible for \$85,000 of the construction cost with the balance recoverable by future development through a registered Latecomers Agreement.
- Registration of a 2.5m statutory right-of-way (SRW) along the James Road frontage for the provision of public access, municipal and private services including BC Hydro, telecommunications and gas, as necessary. Building setbacks will be applied from the SRW and not the existing property line.
- Construction of a multi-use path along the west side of James Road (as indicated under the Parking Variance section of this report).

Sustainability Report Card

The completed Sustainability Report Card for the development proposal is included as Attachment 10 and the following table summarizes the scoring at this point in the process.

Sustainability Pillar Application	Cultural	Economic	Environmental	Social	Overall Total
148-154 James	36%	71%	47%	57%	51%
Road	(4 out of 11)	(5 out of 7)	(25 out of 53)	(25 out of 35)	

399

Considered at the April 20, 2021 Council meeting

240

Other Option(s)

If Council determines that substantial changes are needed before the project proceeds to the next steps, staff recommend in that case to give the bylaw first reading only and refer the project back to staff and applicant to consider specific changes.

Financial Implications

Community Amenity Contributions (CACs)

The CAC amount will be established at the development permit stage once the final residential floor area is confirmed and prior to the adoption of the rezoning bylaw. Based on the proposed residential floor area of 5,123m² (55,147ft²) at \$6.00/ft², the contribution would be approximately of \$318,882 after a credit of \$12,000 for the existing parent parcels. Of that total, approximately \$106,294 would be directed to the Affordable Housing Reserve Fund and the remaining \$212,588 would go towards general community amenities.

Density Bonus

The Zoning Bylaw makes provision for bonus density where a FAR greater than 2.5 is being proposed. In this case, the bylaw stipulates that a financial contribution for community amenities equivalent to 75% of the land value of the additional density above a FAR of 2.5 is required. For the purpose of the density bonus calculation, floor areas for commercial and below-market housing are excluded. In this case, a payment of 75% of the land value of an additional 0.58 FAR would be required. The exact amount will be determined for payment prior to adoption of the zoning amendment bylaw.

Public Art Contributions

The applicant has committed to providing a contribution to the Public Art Reserve Fund, which will be based on 0.5% of the cost of construction in accordance with the Public Art Policy. Based on a construction cost estimate of approximately \$11,000,000 by the applicant, the contribution would be \$55,000.

Communications and Civic Engagement Initiatives

Community Planning Advisory Committee (CPAC)

The latest design and proposal was reviewed by CPAC on May 11, 2020 and the committee provided a number of comments for consideration including some concerns around the size of the units, and the location of the development. Full meeting minutes are included as **Attachment 11**.

Community Information Meeting

The applicant held an online Community Information Meeting on March 11, 2021, with approximately 50 people who attended the session. The majority of comments were complimentary of the project. In addition to the virtual meeting, submissions for feedback were received over a ten-day period through an online feedback form. The applicant reported that there were 269 responses to the online feedback form with positive comments specifically on the micro dwellings, accessible units, and rent-to-own program.

400

Considered at the April 20, 2021 Council meeting

241

Public Notification

A notification sign informing the public of the rezoning application has been placed on the subject site in accordance with the City of Port Moody Development Approval Procedures Bylaw, 2011, No. 2918.

Should the rezoning application be given first and second readings, the public will have an opportunity to comment at the Public Hearing, which will occur following a mail-out notification to adjacent residents, an advertisement placed in the local newspaper, and a decal of the public hearing time and date placed on the notification sign.

Council Strategic Plan Objectives

The proposal is consistent with the goals of Council's 2019-2022 Strategic Plan related to a Healthy City by planning for a variety of housing types to meet community needs.

Application Fact Sheet

Applicant: Bill Laidler

Application Type: Rezoning

Project Description: A multi-family apartment building containing 111 units

consisting of 57 micro dwelling units, 49 one-bedroom

units, and five 2-bedroom units.

Development Permit Area: Development Permit Area 1: Neighbourhood Residential

Development Permit Area 5: Hazardous Lands

Application Number: 6700-20-195

Addresses: 148 and 154 James Road

Existing Zoning: Single Family Low Density (RS1) Zone

Proposed Zoning: Comprehensive Development (CD84) Zone

Existing OCP Designation: Multi-Family Residential

Proposed OCP Designation: No change

Surrounding Development: North: Single Detached Residential (RS1) lot. The site is

developed with a single family home but designated for

multi-family residential uses;

East: Low Density Townhouse Residential (RM3) lot. The site is developed with a 52-unit townhouse complex owned by Metro Vancouver Housing (Moray Place). The townhouses are two storeys in height and provide non-

market rental housing;

South: Low Density Townhouse Residential (RM3) lot. The

site is developed with a 50-unit tree-storey townhouse

strata development (Tall Tree Estates); and

West: Moody Middle School zoned Civic Service (P1).

City of Port Moody

Bylaw No. 3308

A Bylaw to amend City of Port Moody Zoning Bylaw, 2018, No. 2937 to facilitate the development of a six-storey residential apartment building at 148 and 154 James Road.

The Council of the City of Port Moody enacts as follows:

Citation

1.1 This Bylaw may be cited as "City of Port Moody Zoning Bylaw, 2018, No. 2937, Amendment Bylaw No. 53, 2021, No. 3308 (148 and 154 James Road) (CD84)".

Amendments

2.1 City of Port Moody Zoning Bylaw, 2018, No. 2937 is amended by rezoning the following lands from Single Detached Residential (RS1) to Comprehensive Development Zone 84 (CD84):

Lot 57 District Lot 190 Group 1 New Westminster District Plan 32978 PID: 000-852-996; and

Lot 58 District Lot 190 Group 1 New Westminster District Plan 32978 PID: 006-760-104.

as shown on the location map in Schedule A of this Bylaw.

2.2 City of Port Moody Zoning Bylaw, 2018, No. 2937 is further amended by adding the following section CD84 to Schedule D:

"CD84. Comprehensive Development Zone (CD84)

CD84.1 Intent

The intent of this zone is to facilitate the development of a six-storey residential apartment building containing a maximum of 111 units, including 11 fully accessible units.

EDMS#550982

Considered at the April 20, 2021 Council meeting

246

CD84.2 Permitted Uses

The following uses are permitted in the CD84 Zone:

- a) Principal Use
 - Apartment.
- b) Secondary Use
 - (1) Home Occupation Type A; and
 - (2) Community Care.

CD84.3 Floor Area Ratio (FAR)

The maximum permitted Floor Area Ratio in the CD84 Zone shall not exceed 3.08.

CD84.4 Lot Coverage

The maximum permitted Lot Coverage is 55%.

CD84.5 Building Height

Buildings in the CD84 Zone shall not exceed six storeys and 21.5m, whichever is less.

CD84.6 Setbacks

Minimum setbacks in the CD84 Zone shall be in accordance with the following:

> Front Lot Line: 5.5m Side Lot Line: 3.0m Rear Lot Line: 4.5m.

CD84.7 Parking

A total of 84 Parking Spaces in the CD84 Zone shall be provided with the following allocations:

- (a) 40 residential spaces for one-bedroom units;
- (b) 5 residential spaces for one-bedroom rent-to-own units;
- (c) 6 residential spaces for two-bedroom and greater units;
- (d) 18 residential spaces for micro dwelling or studios units;
- (e) 5 residential spaces for micro dwelling or studios rent-to-own units; and
- (f) 10 visitor spaces.

406

Considered at the April 20, 2021 Council meeting

247

CD84.8 Bicycle Parking

A total of 171 long-term bicycle parking spaces in the CD84 Zone shall be provided, including 57 long-term electric bike charging parking spaces.

A total of 20 short-term bicycle parking spaces in the CD84 Zone shall be provided.

CD84.9 Landscaping

Refer to section 5.2.10 of this Bylaw for landscaping requirements.

CD84.10 Common Amenity Space

Indoor and outdoor Common Amenity Space in the CD84 Zone shall be in accordance with the following:

- (a) The minimum amount of indoor Common Amenity Space shall be 242m²; and
- (b) The minimum amount of outdoor Common Amenity Space shall be 320m², which includes a rooftop amenity space of, at minimum, 300m².

CD84.11 Adaptable Units

A minimum of 48 units shall be adaptable units and constructed to comply with the standards specified in the *British Columbia Building Code*.

A minimum of 11 units shall be fully accessible units and constructed to comply with the standards specified in the *British Columbia Building Code*.

Attachments and Schedules

- 3.1 The following schedules are attached to and form part of this Bylaw:
 - Schedule A Location Map.

Severability

4.1 If a portion of this Bylaw is found invalid by a court, it will be severed and the remainder of the Bylaw will remain in effect.

MICRO DWELLING POLICIES AND GUIDELINES

Adopted by City Council on March 15, 2014 Amended October 31, 2017

1 Intent

The intent of these guidelines is to encourage the creation of new livable, affordable micro dwelling rental units in the Downtown Eastside and the False Creek Flats areas. Micro dwellings will preferably be located in buildings with a variety of unit sizes and located in close proximity to open green space, commercial, and community and recreational facilities. The aim of these policies and guidelines are to provide flexibility to achieve the City's affordable housing objectives for replacement housing for low-income singles and affordable housing for moderate income renters in the Downtown Eastside, and for low-income singles and moderate income renters as outlined in the False Creek Flats Plan.

2 Application

These policies and guidelines are to be used in conjunction with the Zoning and Development By-law, the Downtown Official Development Plan (Victory Square or C2) or a CD-1 By-law, the Downtown Eastside Oppenheimer District Official Development Plan (Victory Square), the HA-1 and HA-1A (Chinatown), HA-2 (Gastown), FC-1 (the area North of National Avenue), FC-2 (False Creek Flats), IC-3 and the Rezoning Policy for the Downtown Eastside which permit a Micro Dwelling Unit as illustrated in the map below. These policies and guidelines should be consulted in seeking approval for this conditional use.

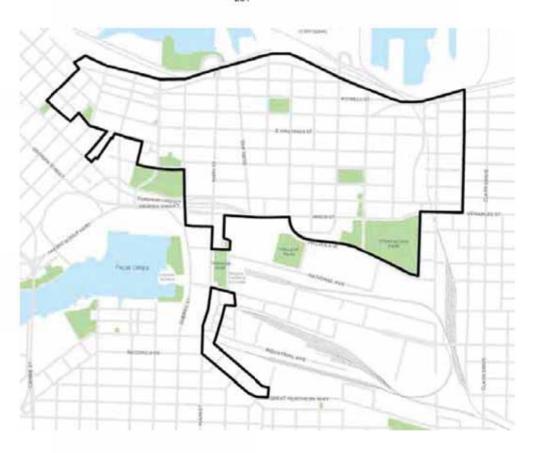

The Micro Dwelling Unit policies and guidelines are only applicable for development permit applications and applicants should also refer to the Vancouver Building By-law and depending on type of rental, applicants should also refer to the Social Housing Design Guidelines and the Rental 100 program. Micro dwelling unit will be secured through a Housing Agreement which must be registered against the title of the property prior to issuance of the Development Permit. The covenant is to ensure that the units are secured as either non-market or market rental units for 60 years or the life of the building (or whichever is greater).

Micro Dwelling Units are new self-contained units (with private bathrooms and kitchens) which are smaller than 320 square feet and may be relaxed down to 250 square feet and are intended for single occupancy.

410

Considered at the April 20, 2021 Council meeting

251

3 General Design Considerations

An application for a Micro Dwelling Unit is a conditional use and requires approval by the Director of Planning or Development Permit Board. In the consideration to allow this use, livability and affordability will be primary goals. These policies and guidelines delineate a set of principles for livability, which include light and ventilation, privacy, and amenity and outdoor space, as well as affordability.

3.1 Light and Ventilation

Natural day light and well ventilated spaces are essential to occupant comfort and well-being. The provision of good day lighting and proper ventilation is an especially important design consideration for Micro Dwelling Units, due to their small size and limited window area. Maximum exposure to daylight and ventilation and fresh air for all small units is encouraged. The Horizontal Angle of Daylight provisions should be considered.

- (a) A minimum of two operable vents should be placed as far apart as possible, to facilitate good air flow.
- (b) Opportunities for higher ceilings (minimum of 9'6") and reflective light shelves that allow light further into the unit should be considered. When the principal living area, including the kitchen space, is more than 7.6 m deep, a strategy to provide natural light to the rear portion of the area must be demonstrated.
- (c) The provision for open residential balconies or sundecks should be considered.

411

Considered at the April 20, 2021 Council meeting

252

3.2 Noise

Good sound separation between units is a key aspect of livability.

- (a) The placement of balconies, windows and their operable vents and their adjacencies must be considered to minimize noise.
- (b) Where casement windows are used, the windows must open in opposite direction to each other to lessen sound transfer between units.

4 Guidelines Pertaining to Regulations

4.1 Internal Design and Facilities

4.1.1 Living/Sleeping Space

Due to small unit size, the principal living area of a Micro Dwelling Unit may also serve as the main sleeping area. As a result, consideration should be given to ensure the thoughtful design of this area so that it may accommodate a multitude of different functions.

- (a) The minimum dimension of the main living/sleeping space should be 3 metres; enough to accommodate a fold down bed and circulation space and day lighted by a large window.
- (b) The sleeping area may be located in a wall recess away from the main living area, but the space must remain contiguous with the main living area and not be enclosed.
- (c) A sleeping area located in the main living area must include built-in hide-a-beds and fold-down kitchen tables that consider day and night uses of the space.

4.1.2 Bathroom

Consideration should be given to the overall design of the unit with regard to privacy, unit identity, sight lines and the direction of the door swing.

- (a) A complete bathroom must be provided which is equipped with a wash-basin, toilet, and a shower and/or bath.
- (b) Bathrooms must be physically separated from the remainder of the unit by partitions and a door to ensure privacy and to isolate noise and odours.

4.1.3 Kitchen

The ability to cook is an essential component of livability. Each Micro Dwelling must include kitchen that is properly ventilated and includes a sink, ample counter space for food preparation, a stove/oven and a modestly-sized refrigerator with freezer.

- (a) Kitchens must include a fridge and freezer combination with a minimum 12 cubic foot unit with a footprint of 24" x 24" and bulk food storage options.
- (b) The kitchen and dining area should include room for two people to stand or sit side-by-side.

4.1.4 Flexibility for Future Unit Reconfiguration

Considerations should be given to the consolidation of building services (i.e. electrical, plumbing, etc.) in order to allow the potential combining of units (conversion to one or two bedrooms) to address future housing need in the area.

4.2 Storage, Outdoor and Amenity Space

4.2.1 In Suite Storage Space

Considerations should be given to storage space for micro dwelling units, with preference for in-suite open and closed shelving units and loft areas in addition to the consideration of accessible and secure storage lockers located outside of the unit. Bulk storage is still required (see Administrative Bulletin Bulk Storage – Residential Developments 1997).

City of Vancouver October 2017
Micro Dwelling Policies and Guidelines Page 3

Considered at the April 20, 2021 Council meeting

4.2.2 Outdoor Space

Access to outdoor space and fresh air are important to health and well-being and will improve the livability of smaller units. The provision of outdoor space, either in the form of private or shared space, based on an aggregate of 4.52 m² per unit is required for all Micro Dwelling Units. If physical limitations impact the quality of the outdoor space, less may be required.

Privacy for residents should be considered.

- Usable private outdoor space should be provided for each micro dwelling unit in the form of balconies, decks or patios.
- Usable shared open space should include be provided in the form of shared courtyards, and common roof decks.
- The private open space should have a minimum single horizontal dimension of 1.8 m and a minimum area of 4.5 m² and should be designed to capture sun and views where possible, as well as to avoid noise and to take account of visual privacy and security.
- Alternatively, a micro dwelling unit that is designed to provide a strong open relationship with the exterior in the form of large operable windows and/or "Juliet" balconies may also be considered. Such operable doors and windows should allow a large amount of area to be open to the exterior, such as casements, sliders, double or single hung types. The amount of openness to the exterior should be large enough to accommodate two adults side-by-side.

4.2.3 Amenity Space

Micro Dwelling Units should include amenity space throughout the building that is accessible to all tenants and includes things such as lounge space, common meeting rooms, etc.

5 Unit Type and Distribution

A mix of Micro Dwelling Units and larger studio, 1-bedroom and 2-3 bedroom units in a building is encouraged. Flexibility may be given to achieve determined housing objectives for the neighbourhood, such as the need for low-income single housing to replace Single Room Occupancy hotels or flexibility to support project design and viability to allow more 3-bedroom family units within a development.

Affordability

Rents must be below average market rents for studio apartments in the local area, in accordance with the annual Canadian Mortgage and Housing Corporation Rental Housing Market Survey. It should be noted that other targets for affordability may be applied. Rental amounts are to be secured in the Housing Agreement.

Re: 148-154 James Road Parking Study: Parking Demand and

TDM Plan

1 INTRODUCTION

This memorandum is a follow-up to the "148-154 James Road Parking Study" memo (dated August 17, 2020) and provides revised information regarding the parking demand forecast and proposed transportation demand management (TDM) plan.

2 PARKING SUPPLY BYLAW REQUIREMENT

2.1 Vehicle Parking

A minimum total of 135 off-street parking spaces are required under the Zoning Bylaw, including 114 resident spaces and 21 visitor spaces (see **Table 1**). The bylaw requirements are currently not satisfied with the proposed parking supply of 84 parking spaces, including 73 resident spaces and 11 visitor spaces (supply rate of 0.74 spaces per dwelling unit). This represents a shortfall of 51 spaces.

Table 1: Off-Street Parking Space Minimum Requirement

Use	Subtype	Quantity	Bylaw Supply Rate	Required Spaces	Proposed Spaces	Difference
Apartment	Micro	49 units	1.0 spaces / unit	49		
(Market	1 BR	43 units	1.0 spaces / unit	43		
Ownership)	2 BR+	5 units	1.5 spaces / unit	7		
	Visitor	97 units	0.2 spaces / unit	19		
Apartment	Micro	17 units	0.9 spaces / unit	15		
(Below Market Rental)	Visitor	17 units	0.1 spaces / unit	2		
Total Parking	Spaces (inc	luding Access	sible Spaces)	135	84	-51

Page 2

2.2 Bicycle Parking

A minimum total of 185 off-street bicycle spaces are required under the Zoning Bylaw, including 171 long-term resident spaces and 14 short-term visitor spaces (see **Table 2**).

The bylaw requirements are currently satisfied with the proposed bicycle parking supply of 232 long-term spaces (additional 36%, or 61 spaces), and 14 short-term spaces, for a total of 246 spaces.

Table 2: Off-Street Bicycle Space Minimum Requirement

Use	Subtype	Quantity	Bylaw Supply Rate	Required Spaces	Proposed Spaces	Difference
Residential	Long Term	114 units	1.5 spaces / unit	171		
Apartment	Short Term	114 units	1.0 spaces / 50 units	14		
Total Bicycle	e Spaces			185	246	+61
Long Tern	n			171	232	+61
Short Terr	n			14	14	0

3 PARKING DEMAND FORECAST

The baseline parking demand for the proposed development was forecasted using estimated parking demand for comparable sites (also known as proxy or representative sites) with similar land use, size, setting, and access to services and amenities.

3.1 Resident Parking Demand, One- and Two-Bedroom Units

The Metro Vancouver 2018 Apartment Parking Study provides parking demand data adjusted for transit proximity and unit size for sites located outside of the City of Vancouver and University of British Columbia (UBC) area (see **Table 3**).

Our File No: 2834.B01

Page 3

Table 3: City of Port Moody Off-street Parking Requirements and Metro Vancouver Parking Study Data

Unit Size	Port Moody Base Requirement (Zoning Bylaw, Section 6.3.1)	Port Moody Transit- Oriented Development Requirement (Zoning Bylaw, Section 6.8.2)	Metro Vancouver Demand, 400 m of Frequent Bus Service
Market Ownership	,	(//)	
1 BR	1.00 space / unit	1.00 space / unit	0.92 space / unit
2 BR	1.50 spaces / unit	1.35 spaces / unit	1.32 spaces / unit
Market Rental			
1 BR	1.10 spaces / unit	1.00 space / unit	0.80 spaces / unit
2 BR	1.10 spaces / unit	1.00 space / unit	1.00 space / unit

Resident parking demand for the one- and two-bedroom units was assumed to be equivalent to the City's off-street parking requirements:

- Resident parking demand of 1.0 space per unit for one-bedroom units.
- Resident parking demand of 1.5 spaces per unit for two-bedroom units.

No further parking demand analysis is required for the one- and two-bedroom units.

3.2 Resident Parking Demand, Micro Units

Micro units are purpose-built, small studio or one-bedroom dwelling units with a kitchen and bathroom provided. There is no standard definition for micro units, but they typically range in size from 280 to 450 sq. ft., with an average size of less than 350 sq. ft.¹

Multi-family residential buildings with micro units in the District of Saanich and City of Victoria were reviewed to estimate an appropriate demand rate for the proposed development. WATT has previously completed parking studies for developments in the Greater Victoria area that included micro units. As such, we reached out to the municipalities to obtain information on the approved number of dwelling units, off-street parking supply, TDM measures, and proximity to services and amenities as requested by the City of Port Moody (see **Appendix A** for verification).²

- Table 4 provides a summary of the approved development application with respect to
 the total number of approved dwelling units, residential parking supply (excluding nonresidential and residential visitor parking), and the approved residential parking supply
 rate.
- Table 5 provides a summary of the total number of approved dwelling units by unit size (number of bedrooms). Micro units are listed as zero bedrooms (studios).
- Table 6 provides a summary of the TDM measures that were secured by the municipality to support the proposed parking supply as part of the application.
- Table 7 provides a summary of proximity to the nearest bus stop by transit service.
- Table 8 provides a summary of proximity to services and amenities for the census
 dissemination block that the site is in, sourced from the national StatsCan-CMHC
 Proximity Measure Database. The database provides an objective evaluation of
 proximity to services and amenities for each dissemination block in the country using a
 gravity model. The data are normalized and classified in quintiles (1 to 5) with a
 composite amenity index (1 = low; 2 = medium; 3 = high).

2021-02-18

Our File No: 2834.B01

Page 7

3.2.1 Comparable Developments, Land Use

For the three comparable developments in Saanich and Victoria, the applications proposed a range of unit sizes from studios to three-bedroom units. The share of micro units relative to the total number of dwelling units ranged from 22% (3185 Tillicum Road) to 78% (626 Gorge Road East) and 88% (655 Douglas Street).

At the time of the development applications, the District of Saanich and City of Victoria did not have a micro unit use defined in their respective zoning bylaws; this is still the case as of today (February 2021). The micro units were classified as a multiple dwelling use by the municipalities.

3.2.2 Comparable Developments, Off-street Parking Requirement and TDM

3185 Tillicum Road, Saanich

The development was classified as an "Apartment" use under the District's off-street parking requirements at the time of the application, which specified a requirement of 1.5 spaces per dwelling units. The District has a "flat" parking supply rate for the proposed residential use in the zoning bylaw, with the same rate applied to all units regardless of unit size.

The proposed residential parking supply of 62 spaces (104 unit building) was accepted by the municipality with after considering that: (1) actual parking demand was estimated to be 0.66 spaces per dwelling unit based on comparable developments, lower than the District's off-street requirement; and (2) the provision of TDM measures by the applicant would close the gap between the baseline parking demand (104 units \times 0.66 spaces per unit = 69 spaces) versus the proposed supply of 62 spaces.

The TDM measures consisted of a transit pass subsidy for the building's first two years (financial contribution of \$15 per month for up to two residents per dwelling unit), and a transportation welcome package and communications to building residents.

626 Gorge Road, Victoria

The application proposed a conversion from an existing motel use to multi-family residential and retail. The development was classified as a "Multiple Dwelling" use under the City's off-street parking requirements at the time of the application, which specified a requirement of 1.3 spaces per dwelling units. The City had a "flat" parking supply rate for the proposed residential use in the zoning bylaw, with the same rate applied to all units regardless of unit size.

The proposed residential parking supply of 10 spaces (23 unit building) was accepted by the municipality with no additional TDM requirements.

Page 8

655 Douglas Street, Victoria

The application proposed a conversion from an existing hotel use to multi-family residential. The development was classified as a "Residential" use in a "Central Area Zone" under the City's off-street parking requirements at the time of the application, which specified a requirement of 0.7 spaces per dwelling units. The City had a "flat" parking supply rate for the proposed residential use in the zoning bylaw, with the same rate applied to all units regardless of unit size.

The proposed residential parking supply of 60 spaces (146 unit building) was accepted by the municipality with a condition that two carshare spaces be provided on-site.

3.2.3 Comparable Developments, Proximity to Transit

The Metro Vancouver 2018 Apartment Parking Study found a relationship between parking demand and proximity to frequent bus service using a threshold of 400 m.³

All comparable developments and the subject site are within 400 m of frequent bus service. Furthermore, the subject site is in proximity (less than 1 km) to rapid rail transit (higher order of transit service), unlike the comparable sites in Saanich and Victoria.

3.2.4 Comparable Developments, Proximity to Services and Amenities

The comparable sites were, on average, located within census dissemination blocks classified as a medium amenity dense area. The subject site is in a dissemination block classified as a low amenity dense area.

Of the ten proximity measures:

- Seven measures had a median score higher than the subject site (employment, grocery store, pharmacies, primary education, public transit, and neighbourhood parks).
- Two measures had a median score that was equal (health care and child care).
- One measure had a median score that was less (secondary education).

Four measures warrant further discussion:

The employment and transit scores for the subject and comparable sites are similar.
 They are both in the third and fourth quintile respectively, meaning it ranks average or above average across the country. Future residents of the subject site will have access to employment opportunities within the area, and/or easy access to frequent transit to

Page 9

access employment farther away. This can support residents living at the site without a vehicle (or be less reliant on a vehicle).

- There are a number of green spaces within proximity of the subject site, including James Park (650 m away; 8-minute walk) and Inlet Park (800 m away; 10-minute walk). These spaces are not classified as a "neighbourhood park", and thus not reflected in the "neighbourhood park" measure.
- The subject site had a score of zero for grocery stores compared to the median score of five. The closest grocery stores to the subject site include the following:
 - Thrifty Foods (170 Brew Street; 1.2 km away).
 - Confetti's European Meat Market & Grocery (1.2 km away).

While Thrifty Foods and Confetti's are outside of a comfortable 800 m walking distance, they are still within reach by non-auto modes such as transit and cycling.

3.2.5 Baseline Parking Demand

To estimate an appropriate baseline parking demand rate for subject site's proposed micro units, two sets of demand rates were calculated using the comparable developments. First, the approved residential parking supply rate was assumed to be equivalent to the comparable development's parking demand as directed by the City of Port Moody. Second, vehicle ownership (measured as the number of insured vehicles) associated with the comparable sites were obtained from the Insurance Corporation of British Columbia (ICBC).

Four adjustments were made to both of the estimated demand rates to account for differences in terms of TDM, location, unit size, and housing tenure:

- TDM Adjustment: The parking demand rate was adjusted to remove the influence of TDM from parking demand (i.e., parking demand would be higher without the provision of the TDM measures).
- 2. Location Adjustment: Greater access to services and amenities is assumed to reduce vehicle parking demand. The parking demand rate was adjusted to remove the influence of location to be comparable with the subject site (i.e., parking demand would be higher for the comparable sites if they were located in the same location as the subject site). This was estimated by using the difference in the sum of the proximity measure scores for each comparable site to the subject site.
- Unit Size Adjustment: Research has found a relationship between unit size and parking demand, with vehicle ownership increasing as household and unit size increases.⁴
 Bedroom factors obtained from the Metro Vancouver 2018 Apartment Parking Study

Our File No: 2834.B01

Page 10

were used to break down the parking demand by unit size. Parking demand for micro units were estimated using the following factors:

- One-bedroom rental units are 117% higher than studio rental units.
- Two-bedroom rental units are 24% higher than one-bedroom rental units.
- c. Three-bedroom rental units are 23% higher than two-bedroom rental units.5
- 4. Tenure Adjustment: The parking demand rate was adjusted to remove the influence of different residential tenures. Demand was adjusted by 15% to reflect the difference in parking demand for a rental versus strata studio and one-bedroom unit based on sites outside of the City of Vancouver (e.g., Port Moody) as described in the Metro Vancouver 2018 Apartment Parking Study.

Using the approved parking supply approach, a strata micro-unit parking demand of <u>0.56</u> spaces per unit and a rental micro-unit demand of <u>0.48 spaces per unit</u> was estimated (see **Appendix B** for details).

Using the ICBC vehicle ownership approach, a strata micro-unit parking demand of <u>0.45 spaces per unit</u> and a rental micro-unit demand of <u>0.39 spaces per unit</u> was estimated (see **Appendix C** for details and **Appendix D** for a copy of the ICBC report).⁶ These demand rates were based on the maximum number of insured vehicles associated with each site over the course of a year, with a snapshot at three time periods (December 31, 2018; August 31, 2019; and December 31, 2019).⁷ If the demand rates were calculated using an average of the three snapshots, a strata micro-unit parking demand of <u>0.40 spaces per unit</u> and a rental micro-unit demand of <u>0.34 spaces per unit</u> was estimated.

The parking demand rates from the vehicle ownership approach using the maximum number of insured vehicles reported is recommended for a conservative approach.

⁵ Unit size factor for three-bedroom rental units versus two-bedroom rental units were assumed to be the same strata residential due to limited sample size in the Metro Vancouver Apartment Parking Study.

Obemand rates calculated under the "approved parking supply" approach are based on the approved dwelling unit count and mix; refer to Table 5. Demand rates calculated under the "ICBC vehicle ownership" approach are based on the actual constructed dwelling unit count and mix based on BC Assessment data (retrieved from the 2018 Building Information Report); refer to Appendix C, Table C-3. This ensures demand rates are calculated consistently between the two approaches.

Five vehicle categories are provided by ICBC: (1) passenger; (2) commercial; (3) motorcycle/moped; (4) motorhome; and (5) utility trailers. Only passenger and commercial vehicles are considered in the analysis.

Page 11

3.3 Visitor Parking Demand

The Metro Vancouver 2012 Apartment Parking Study found that visitor parking was oversupplied across the region, and the standard municipal visitor parking requirement of 0.20 spaces per dwelling unit was excessive. Observed visitor parking demand was found to be below 0.10 spaces per unit, with a peak of 0.06 spaces per unit.

An average visitor parking demand of 0.10 spaces per unit has also been observed in other communities. For example, WATT found an average peak visitor parking demand of below 0.10 at multi-family residential strata sites in Langford, BC, a suburban community similar to Port Moody (see **Table 9**). Parking occupancy was collected between 9:00 p.m. and 10:30 p.m. at night, which corresponds with the peak period identified for visitor parking during the weekday and weekend as recommended by the Urban Land Institute (ULI).8

ULI's Shared Parking also provides monthly adjustment factors for visitor parking. September to June represent 100% of peak demand, with a modest reduction in July and August with a recommended monthly factor of 95%. Sizing visitor parking for a design day outside the typical weekday and weekend for infrequent peaks such as holidays is not recommended, as this would result, on average, unused parking for most of the year.

A visitor parking demand of 0.10 spaces per unit is recommended.

Table 9: Representative Parking Demand Rates, Residential Visitor

Address		Num	ber of U	Inits	Visitor	Peak	Parking	
	0 BR	1 BR	2 BR	3 BR	Total	Parking Supply	Visitor Occupancy	Demand Rate
3240 Jacklin Rd, Langford	0	21	9	0	30	6	6	0.20

RE: 148-154 James Road Parking Study: Parking Demand and TDM Plan

2021-02-18

Our File No: 2834.B01

Page 12

3.4 Summary of Parking Demand

A peak parking demand of <u>90 spaces</u> is forecast for the proposed development, a difference of 45 spaces from the minimum bylaw requirement of 135 spaces (see **Table 10**). This represents an overall parking demand rate of 0.79 spaces per dwelling unit.

The estimated parking demand of 90 spaces is higher than the proposed parking supply of 84 spaces, resulting in a shortfall of six spaces. Transportation demand management (TDM) measures would be required to reduce the on-site parking demand until it can be accommodated by the proposed parking supply.

Table 10: Summary of Baseline Parking Demand

Use	Subtype	Quantity	Baseline Parking Demand Rate	Baseline Parking Demand	Proposed Spaces	Difference
Apartment	Micro	49 units	0.45 spaces / unit	22		
(Market	1 BR	43 units	1.00 spaces / unit	43		
Ownership)	2 BR+	5 units	1.50 spaces / unit	7		
Apartment (Below Market Rental)	Micro	17 units	0.39 spaces / unit	7		
Apartment	Visitor	114 units	0.10 spaces / unit	11		
Total				90	84	-6
Resident				79	73	-6
Visitor				11	11	0

If the average demand rates for the micro units (0.40 spaces per unit for strata and 0.34 spaces per unit for rental) were applied instead of the maximum demand rates calculated from the ICBC data (see Section 3.2.5), the overall total demand would be 87 parking spaces, a reduction of three spaces.

Page 13

4 TRANSPORTATION DEMAND MANAGEMENT

An overview of TDM measures that the applicant has indicated interest to secure for the proposed development is provided below based on recommendations by WATT.

4.1 Carshare Vehicle

Carsharing allows individuals to access and rent a vehicle on a short-term basis. Two-way carshare systems require the user to return the vehicle to a station, and one-way carshare allows the user to begin and end their trip at any location within a specified boundary. A number of studies have found that carsharing programs can have a significant impact in reducing vehicle ownership and thereby lower parking demand.

In the Metro Vancouver region, one study found that households that joined Modo reduced their vehicle ownership from an average of 0.68 to 0.36 vehicles. A study by Metro Vancouver found that on average, up to three private personal vehicles were shed per car share vehicle. When the avoidance of acquiring a private vehicle was included, each carshare vehicle removed between 5 to 11 private vehicles from households. Currently, there is one private one-way carshare provider, Modo, that is operating in Port Moody.

A publicly accessible carshare vehicle should be located on the surface level, either on-site or off-street as an on-street parking space (i.e., public right-of-way) directly in front of the building to ensure high visibility with consideration to the site context. Alternatively, the carshare vehicle can be located in the underground parking if it's reserved only for building residents.

The City supports a reduction of six (6) vehicle parking spaces for every one (1) electric carshare vehicle provided by the applicant.

4.2 Off-site Active Transportation Infrastructure Improvement

Contributions towards off-site pedestrian and cycling infrastructure that completes gaps in the active transportation can support walking and cycling. A 170 m off-street multi-use pathway is proposed adjacent the site that would run parallel to James Road and terminate at St. Johns Street. The multi-use pathway would provide cycling connectivity for residents by connecting to the City's proposed cycle path/buffered bike lane on St. Johns Street as identified in Map 3

Page 14

(Long Term Bicycle Network) of TransPort Moody. 11 It would also provide pedestrians with an improved and more direct connection to access frequent transit on St. Johns Street.

The City of San Francisco's Transportation Demand Management Technical Justification Report estimated a 2% reduction in vehicle miles travelled as a result of pedestrian improvements in the adjacent road network. ¹² In addition, a detailed transportation demand management study prepared for the City of Hamilton identifies off-site cycling infrastructure connections as the most effective walking & cycling TDM measure. ¹³

A reduction of eight (8) vehicle parking space is supported if the applicant commits to providing contributions towards off-site active transportation infrastructure, such as a multi-use pathway to St. Johns Street from the site.

4.3 Additional Long-term Bicycle Parking Spaces

The provision of additional bicycle parking spaces can support residents in order to satisfy potential bicycle demand in the current and future. Insufficient bicycle parking is considered a key barrier to promoting cycling, with additional bicycle parking associated with an increase of cycling by 10 to 40%.¹⁴

A reduction of two (2) vehicle parking spaces is supported for every additional 10% of longterm bicycle spaces provided.

4.4 Shared Electric Bicycles and Electric Bicycle Parking Charging

E-bikes are electric bicycles with an electric motor of 500 watts or less and functioning pedals that are limited to a top speed of 32 km/h without pedalling. E-bikes are an emerging form of mobility and have the potential to displace and/or substitute vehicle trips and reduce vehicle ownership. Research has found that prospective e-bike users would feel more comfortable if they could park their bicycle in a locked or supervised area. The provision of energized outlets for long-term bicycle parking spaces can facilitate charging opportunities for future e-bike users

Page 15

at the site. 15 Furthermore, e-bikes are particularly popular among older adults, consistent with the target demographic of the building. 16

A minimum of 25% of bicycle parking spaces should be energized to increase e-bike ownership, with priority for installation of plugs given to the horizontal bicycle parking. Furthermore, assignment of bicycle parking spaces with energized outlets should be considered to ensure e-bike users do not compete for these spaces with non-e-bikes.

A reduction of four (4) vehicle parking spaces is supported for the proposed development if nine (9) shared e-bikes are provided for exclusive use of building residents.

A reduction of four (4) vehicle parking spaces is supported for the proposed development if 25% of the long-term bicycle parking spaces (57 spaces) have access to a 110V outlet.

4.5 Bicycle Maintenance Facility

Residential developments can provide dedicated on-site bicycle maintenance facilities, such as bicycle repair tools, pumps, wash stations, etc., to support ongoing bicycle use among building users. This is particularly beneficial for residents living in smaller dwelling units where space is at a premium and/or access to a bicycle repair service may be inaccessible or present a financial barrier.

A reduction of two (2) vehicle parking spaces if a bicycle maintenance facility is provided for use of building residents.

4.6 Passenger Loading Space

The provision of a dedicated passenger loading zone can meet the expected demand for pickup and drop-off activity, and reduce parking demand for the following users of the building:

 Seniors and people with disabilities who use specialized transit services such as HandyDART and other services (e.g., TaxiSaver, Hospital Transfers).

Page 16

 Students and young professional who use ride-hailing services. Reductions in vehicle ownership of 9% have been reported among ride-hailing users.¹⁸

The proposed on-street passenger loading zone located on James Rd directly in front of the building entrance can help ensure passenger loading activities can be conveniently accommodated for the future tenants. Furthermore, if approved, the applicant should formally designate the space on ride-hailing applications (e.g., Uber, Lyft) for pick-up/drop-off purposes. In the City of Vancouver, a parking reduction of 4 to 7% can be achieved through the provision of a loading space for transit vehicles (e.g., HandyDART) for strata and rental housing developments.¹⁹

A reduction of three (3) vehicle parking spaces is supported if a dedicated passenger loading zone is provided on James Rd.

4.7 Transportation Welcome Package

An information package on local sustainable transportation options specific to the site should be provided to new residents as part of the move-in process. Other transportation collateral, such as up-to-date bus schedules in print, should also be considered to be provided at key locations in the building, including the residential lobby entrance.

As part of the information package, the following information should be included:

- Bus schedules and route maps for nearby transit service (Route 160, 183, 184, and N9).
- Map showing best walking and cycling routes to nearest bus stop on St. Johns Street and Inlet Centre and Moody Centre SkyTrain stations.
- Registration information for HandyDART, including a copy of the application form.

The US Federal Highway Administration identifies a parking demand reduction ranging from 1 to 5% for information and promotion-based strategies.

A reduction of one (1) vehicle parking space is supported if a transportation welcome package is provided to building residents.

Page 17

4.8 Mobility Scooter Parking

11 of the 114 dwelling units proposed will be designed to accommodate people with disabilities (four of the two-bedroom units and six of the micro units). Dedicated mobility scooter parking is proposed to be provided to supplement the accessible vehicle parking spaces. Research has highlighted the importance of mobility scooters as a travel option:

- One study reported that mobility scooters enabled users to travel distances they
 previously would have made by foot (or short distance vehicle trips) without any
 physical effort. Furthermore, for some older people, a mobility scooter can be a
 replacement for a car and for the types of trips they would have made with a car.
- Another study surveyed 480 mobility scooter users of all ages in the United Kingdom. It
 found that most respondents used a scooter instead of a wheelchair because they are
 easier to use and more comfortable. It also reported that that users relied on their
 scooter to get around, with 74% of respondents saying they would not make the same
 trips without their scooter. Another study found a similar result reporting that scooters
 allowed users to travel to more destinations, achieve more daily tasks, maintain
 independence, and increased their sense of wellbeing.²⁰
- Lastly, a study from the US looked at the 2017 National Household Travel Survey to
 understand the travel patterns of American adults with disabilities.²¹ It found that
 regardless of age, people with disabilities make fewer trips per day on average than
 people without disabilities. It also reported that workers with disabilities age 18 to 64
 make fewer trips compared for workers without disabilities. Mode share data reported
 that people with disabilities travel by personal vehicles—as drivers or as passengers—
 for a smaller share of trips than people without disabilities. And people with disabilities
 age 18 to 64 travel as passengers for a greater share of personal vehicle trips.

The last two statistics confirm that people with disabilities are less reliant on personal vehicles and more likely to be transported as a passenger or utilize a personal mobility device.

A reduction of ten (10) vehicle parking spaces is supported if dedicated mobility scooter parking is provided in the 11 units intended for persons with disabilities. The reduction is calculated based on the equivalent vehicle parking demand substituted by scooter parking.

- Four (4) accessible 2-BR units × 1.5 parking spaces per unit = six (6) vehicle spaces
- Six (6) accessible micro units x 0.56 parking spaces per unit = three (3) vehicle spaces

Page 18

4.9 Summary of TDM Plan

The proposed TDM plan represents a parking demand reduction of up to 43 spaces for the proposed residential uses, including the micro, one-bedroom, and two-bedroom units (see **Table 10**). This would reduce the estimated baseline demand from 91 spaces to 48 spaces.

The reduction of 43 spaces were distributed equally across the residential units, except for the mobility scooter parking measure with a reduction of six spaces to the four proposed accessible two-bedroom units, and three spaces to the six proposed accessible micro units. As a result, the proposed parking supply of 84 spaces would accommodate the peak demand of 47 spaces.

Table 11: Summary of TDM Plan and Parking Demand Reductions

TDM Measure	Provision	Parking Spaces
Baseline Parking Demand		90 spaces
Resident		79 spaces
Visitor		11 spaces
TDM Demand Reduction (Resident Only)		-43 spaces
Carshare Vehicle	One (1) vehicle	-6 spaces
Off-site AT Improvement	Multi-use path	-8 spaces
Additional Long-term Bicycle Parking	31% additional	-6 spaces
Shared E-Bikes	Nine (9) bicycles	-4 spaces
Long-term E-Bike Charging	57 bicycle spaces	-4 spaces
Bicycle Maintenance Facility	One (1) facility	-2 spaces
Passenger Loading Space	One (1) space	-3 spaces
Transportation Welcome Package	Welcome package	-1 space
Mobility Scooter Parking	11 spaces	-9 spaces
TDM-Adjusted Parking Demand		47 spaces
Resident		36 spaces
Visitor		11 spaces

The City of Port Moody has indicated a maximum permitted reduction of 12 spaces associated with TDM, with the following conditions:

- The building is not eligible for the Port Moody Multifamily Permit Parking program;
- The parking must be unbundled and rented to individual units based upon availability;
- Owners must be made aware of the parking availability at time of rental or sale;
- The multiuse pathway must be extended to St. Johns Street;
- Provision of shared e-bikes; and
- An ICBC ownership survey be provided for the example properties to confirm if onstreet parking is supporting the project.

RE: 148-154 James Road Parking Study: Parking Demand and TDM Plan

Page 20

CONCLUSION

A peak parking demand of 47 spaces (36 residents and 11 visitors) is forecast for the proposed development with the implementation of TDM, a difference of 88 spaces from the minimum bylaw requirement of 135 spaces. This represents an overall parking demand rate of 0.42 spaces per dwelling unit based on 114 proposed dwelling units.

The proposed parking supply for the site is 84 spaces (parking supply rate of 0.74 spaces) and is expected to accommodate the peak parking demand of 47 spaces, contingent on the provision of the TDM plan. Table 11 provides an overview of the baseline versus TDM-adjusted parking demand and the proposed parking supply breakdown.

Table 12: Summary of TDM-Adjusted Parking Demand

Use	Subtype	Quantity	Baseline Parking Demand Rate	Bylaw Req.	Baseline Parking Demand	TDM- Adjusted Parking Demand	Proposed Spaces	Diff. from TDM
Apartment	Micro	49 units	0.45 spaces / unit	49	22			
(Market	1 BR	43 units	1.00 spaces / unit	43	43			
Ownership)	2 BR+	5 units	1.50 spaces / unit	7	7			
Apartment (Below Market Rental)	Micro	17 units	0.39 spaces / unit	15	7			
Apartment	Visitor	114 units	0.10 spaces / unit	21	11			
Total				135	90	47	84	+37
Resident				114	79	36	73	+37
Visitor				21	11	11	11	0

Note: The TDM-adjusted parking demand is calculated by subtracting the parking demand reduction of 43 spaces attributed to the TDM plan from the baseline demand attributed to residents.

5.1 Recommendation

City of Port Moody:

 Support the proposed parking supply of 84 spaces (73 resident spaces and 11 visitor spaces), with a condition of implementation of a TDM plan.

Applicant:

1. Commit to a TDM plan to support the proposed parking variance.

Sincerely,

WATT Consulting Group

Considered at the April 20, 2021 Council meeting

Multi-Family Sustainability Report Card

Purpose

The Sustainability Report Card recognizes that developers, builders, designers, and others proposing changes to the built environment have an important role in creating a sustainable community. Sustainability involves stewardship of land and environmental resources, as well as green building and a focus on design elements that bring people together and help communities flourish economically, socially, and culturally. Port Moody encourages innovative thinking in community design to achieve a more sustainable community.

To this end, the Report Card is a requirement for rezoning, development permit, and heritage alteration permit applications. The Report Card identifies performance measures based on community sustainability values: these measures are used to evaluate development proposals. The Report Card is intended to be a summary of overall project sustainability. It is a tool to be integrated with all other development approval requirements.

Process

There are six steps to follow in completing the Sustainability Report Card process:

- Make a development inquiry to Development Services regarding your proposed rezoning, development permit, or heritage alteration
 permit. Staff will provide you with a hard copy of the Sustainability Report Card and provide a weblink to portmoody.ca/SRC where
 you can find a fillable PDF version of the Report Card.
- Attend a pre-application meeting with City staff to discuss your proposal. The Planner will determine if the Sustainability Report Card is a document that must be submitted with your application.
- 3. If required, complete a Report Card by filling in the appropriate information that applies to your particular application and submit the completed Report Card (saved version of online fillable PDF or hard copy) to the appropriate City staff (<u>sustainabilityreportcard@portmoody.ca</u> or deliver to City Hall Planning Department at 100 Newport Drive), along with a completed land use application.
- 4. The Planner will review the Report Card for completeness and accuracy and forward to staff in various departments for feedback.
 The Planner will determine your preliminary score and discuss the results of the staff review with you. You will then have an opportunity to improve your score with respect to the sustainability of your proposal and resubmit an updated Report Card.
- 5. The Planner will make comments, determine your final score, and prepare the Project Report Card Summary. The Summary will be included in the land use reports that are distributed to the Advisory Design Panel, Community Planning Advisory Committee, and Council.
- If your application is approved by Council, your final Report Card is maintained in the development file and a copy is provided to the City's Building Division.

Instructions

- Your Report Card must contain sufficient detail to ensure each measure can be evaluated. To do this, make reference to the appropriate
 plans, drawings, and reports that demonstrate how the performance measure is met.
- . The relevance of the questions will depend on the nature and scope of your project, so not all questions will be applicable to all projects.
- Some measures are marked 'EARLY STAGE'. This indicates that these measures must be considered in the design phase as it is
 unlikely they can be added to a proposal later on.

Italicized words are in the Glossary at the back of this document.

485

Considered at the April 20, 2021 Council meeting

326

- Similarly, some measures are marked 'BASELINE'. Although the Report Card is not a pass or fail test of development applications, it
 does set a minimum score to indicate the City's minimum expectations. Items labelled 'BASELINE' count toward a minimum score as
 they are considered to be low cost and readily achievable.
- Italicized terms are defined in the Glossary at the end of the Report Card document.
- Refer to the Resources section for links to Internet resources relevant to measures in the Report Card.

Scoring

- Performance measures are assigned weighted scores from 1 to 10 to indicate their significance based on; (1) level of difficulty to
 integrate into project design; (2) order-of-magnitude cost added to the project; (3) degree of effectiveness for increasing the overall
 project sustainability; (4) identified community priority in the Official Community Plan; and (5) level of urgency for Port Moody in
 terms of achieving community sustainability goals.
- City staff score the completed Report Card based on the principle of best achievable on each site for each performance measure.
 Where possible, points for achieving various means are indicated. In other cases, the number of means to achieve a performance measure may exceed the total points possible for an item. In this case, the Planner will make a fair assessment of the project's performance for this measure with respect to the conditions of the site as a percentage and translate this to the possible score.
- Only whole number scores will be assigned. This will be achieved by rounding to the nearest whole number. For example, if overall
 performance for a measure is deemed to be about 80 per cent and the possible score is out of 4, then a score of 3 points out of 4
 will be assigned.
- The Report Card is an iterative process with the applicant. The applicant has an opportunity to comment and make changes to their
 proposal before the scores are considered final and shared with public advisory bodies and Council.
- Additional space is provided for the applicant to address innovations and constraints not captured elsewhere in the Report Card.
 These items are not scored, but are given specific mention on the Project Report Card Summary.
- Staff will review your completed Report Card and provide feedback before your project is scored to give you the opportunity to
 achieve the highest score possible.

Monitoring

In general, the information required from the applicant for the Sustainability Report Card is similar to the kind of information required for a typical development application. However, to ensure accountability, you can expect the City to request additional information, such as: photos of installed systems or products, design drawings, professional reports, copies of receipts, or other records that can be used to verify the implementation of the selected sustainability measures. We encourage you to provide as much information as possible to assist City staff in their review of your development proposal.

Public Information

The public may request a review of any completed Report Card related to a development application. Copies of the Report Card are maintained by the Planning Division. The Development Services Department makes Report Cards available following completion of the project.

Site Context | Ecology

Performance Measure Description and Scoring

Project provides bird-friendly development through landscaping that provides habitat to native species and building design that reduces bird collisions.

See Vancouver Bird Strategy

Applicant Explanation and Reference to Plans, Drawings, and Reports

List all elements that reduce the impact that urbanization has on birds for this project:

-Planting design includes vegetation around the site to encourage bird habitat. Plantings are integrated in layers to allow for nesting and shelter. Shrub and tree species have been selected to provide food source.

-Tree protection to ensure retention of large trees on the adjacent property to the north. Creates bird friendly environment.

Bird collision mitigation:

Most birds will avoid patterns on glass with vertical stripes or horizontal stripes spaced 2 inches or less apart. Balcony glazing will include horizontal slats. Windows with screens and blinds

How well does the project address community health and wellness?

Community Building

Performance Measure Description and Scoring

Project provides urban vitalization by involving land owners and occupants, community groups, and end user groups who may be affected by the proposal in the planning process to identify and showcase Port Moody's unique assets, i.e. goes above and beyond standard notification and consultation.

Examples:

 Host a community-building workshop with the neighbourhood at the time of a project's inception to determine values and identify unique assets to leverage through design.

Staff will advise on notification requirements and appropriate stakeholder consultation

Applicant Explanation and Reference to Plans, Drawings, and Reports

Please identify stakeholders and explain their involvement:	Staff Comments
A Community Information meeting was held on March 11, 2021 and information available to the public between March 1st and March 12th. There were over 360 respondents with a significant amount of excitement for this project. As an example Jenny, a care aid at Eagleridge Hospital commented: I've lived in a small studio apartment off St Johns Street for the last	
five years. It's important to me that I live close to work, I don't own a car and walk everywhere I go. But I've found it next to impossible to afford a home in Port Moody. Sitka House will be an opportunity.	
Identify actions taken in response to stakeholder input: Community feedback suggested that more open space would be beneficial. Previous plans did not include a roof top amenity due to the significant costs.	
Sitka House has added the 13,000 sf amenity open to all residents. This will provide an opportunity for social connections between the residents while enjoying the open air.

Report Card Glossary

Accessible housing - Housing designed and constructed to be universally accessible to people of diverse ages and abilities.

Adaptable unit – A dwelling unit that provides flexible design features that meet BC Building Code minimum requirements; it can be adapted to meet the changing needs of any occupant for reasons of disability, lack of stamina, and progressing through different life stages to support independent living.

Accessible housing/unit – Housing with fixed design features to enable independent living for persons with disabilities, such as those in wheelchairs.

Affordable market housing – Housing that is affordable to moderate income households achieved through tenure, location, reduced parking, modesty in unit size, level of finishing, and design and durability over time as the buildings age.

BC Energy Step Code – BC Energy Step Code is a voluntary roadmap that establishes progressive performance targets (i.e., steps) that support market transformation from the current energy-efficiency requirements in the BC Building Code to net zero energy ready buildings.

Beautification – The process of making visual improvements appropriate to a specific place, including but not limited to building facades, landscaping, decorative or historic-style street elements, selection of paving/fencing materials and their treatment, etc. Improvements contribute to Port Moody's reputation as City of the Arts in a sustainable manner.

Brownfield – A term used in urban planning to describe land previously used for industrial purposes or some commercial uses where the expansion, redevelopment, or reuse of the property may be complicated by the potential presence of a hazardous substance, pollutant, or contaminant.

Car/Bike share network – Arrangements between two or more persons to share the use of a vehicle or bicycle for a specified cost and period of time.

Character-defining elements – The materials, forms, location, spatial configurations, uses, and cultural associations or meanings that contribute to the heritage value of a historic place, which must be retained to preserve its heritage value.

Crime Prevention Through Environmental Design (CPTED) – The design and effective use of the built environment to reduce the incidence of crime and improve the quality of life.

District energy systems – A system that uses renewable energy to pipe energy to buildings within a specified area for space heating, hot water, and air conditioning.

Ecological inventory – An inventory that identifies the ecological values in a natural habitat, and is usually the first step in an environmental impact assessment.

Electric vehicle (EV) – An automobile that uses one or more electric motors or traction motors for propulsion. An electric vehicle may be powered through a collector system by electricity from off-vehicle sources, or may be self-contained with a battery or generator to convert fuel to electricity.

Environmentally Sensitive Areas – Land designated as areas that need special protection because of its environmental attributes, such as rare ecosystems, habitats for species at risk and areas that are easily disturbed by human activities. Refer to Map 13 of OCP.

516

Considered at the April 20, 2021 Council meeting

357

Report Card Glossary - continued

Greenfield – Undeveloped land in a city or rural area either used for agriculture or landscape design, or left to evolve naturally. These areas of land are usually agricultural or amenity properties being considered for urban development.

Greyfield – Economically obsolescent, out-dated, declining, and/or underutilized land, often with the presence of abundant surface parking.

Greywater – Wastewater from lavatories, showers, sinks, and washing machines that do not contain food wastes and that can be reused for purposes such as irrigation or flushing toilets.

Habitat corridor – Habitat areas, generally consisting of native vegetation, linking with larger areas of similar wildlife habitat, Corridors are critical for the maintenance of ecological processes, providing food, and allowing for the movement of animals and the continuation of viable populations.

Heat island effect – Heat islands form as vegetation is replaced by hard surfaces to accommodate growing populations. These surfaces absorb, rather than reflect, the sun's heat, causing surface temperatures and overall ambient temperatures to rise.

Heritage rehabilitation - The action or process of making possible a continuing or compatible contemporary use of a historic place through repair, alterations, and/or additions while protecting its heritage value.

Heritage restoration - Returning a historic place back to how it looked at any time in its past.

Invasive plant species – An invasive plant is a non-native species whose interaction causes economic harm, harm to human health, and/or environmental harm.

Light pollution – Brightening of the night sky caused by street lights and other man-made sources, which has a disruptive effect on natural cycles and inhibits the observation of stars and planets.

Market rental housing - Private, market rental rate housing units.

Naturescape planting – Landscaping with species that are naturally adapted to local climate, soils, predators, pollinators, and disease and, once established, require minimal maintenance.

Non-market rental housing – Subsidized rental housing for those unable to pay market-level rents including, but not limited to, public housing owned and operated by government agencies, non-profit housing owned and operated by public and private non-profit groups, and co-operative housing owned and managed by co-operative associations of the residents.

On-site power generation - The ability to generate power without transporting it from its source to where it can be utilized,

On-site renewable energy generation – The generation of naturally replenished sources of energy, such as solar, wind power, falling water, and geothermal energy.

Passive design - An approach to building design that uses the building architecture to minimize energy consumption and improve thermal comfort.

Public space – A social space that is generally open and accessible to people.

Considered at the December 7, 2021 Council meeting Considered at the April 20, 2021 Council meeting

Report Card Glossary - continued

R-2000-Certified New Home – Best-in-class, energy-efficient homes with even higher levels of energy efficiency than ENERGY STAR-qualified new homes, as well as clean air and environmental features.

Smart technology – Technologies that allow sensors, databases, and/or wireless access to collaboratively sense, adapt to, and provide for users within the environment.

Statement of significance – The first essential step in any conservation project, which involves identifying and describing the character-defining elements; it is important in defining the overall heritage value of the historic place. Refer to the Standards and Guidelines for the Conservation of Historic Places in Canada (see Resources glossary).

Streetscape – The visual elements of a street, including the road, adjoining buildings, sidewalks, street furniture, trees, and open spaces that combine to form the street's character.

Storm water management plan – The management of water occurring as a result of development or precipitation that flows over the surface into a sewer system.

Transit oriented development (TOD) – A mixed-use residential and commercial area designed to maximize access to public transportation; it often incorporates features to encourage transit ridership. A TOD neighbourhood typically has a centre with a transit station or stop (train station, metro station, tram stop, or bus stop), surrounded by relatively high-density development with progressively lower-density development spreading outward from the centre. TODs generally are located within a radius of 400 to 800 metres from a transit stop, as this is considered to be an appropriate distance for walkability.

Universal access – This term refers to broad-spectrum ideas meant to produce buildings, products, and environments that are inherently accessible to both people without disabilities and people with disabilities.

Urban infill – An urban planning term that refers to new development that is sited on vacant or undeveloped land within an existing community, and that is enclosed by other types of development.

Urban forest – The total collection of trees and associated plants growing in a city or town. It includes trees in parks and yards, along roadways and paths, and in other areas, both on public and private lands.

Urban vitalization – The urban planning process of rehabilitating a place or "taking a place to a higher level" using a community-building process (early stage community involvement) to define the key characteristics that make a place unique or special; and applying the concepts of urban conservation to leverage a community's assets, most often in accordance with approved City plans.

Viewscape - The natural and built environment that is visible from a viewing point.

Walkability – The extent to which the built environment is friendly to the presence of people living, shopping, visiting, enjoying, or spending time in an area; improvements in walkability lead to health, economic, and environmental benefits.

Xeriscaping – This terms refers to landscaping and gardening in ways that reduce or eliminate the need for supplemental water from irrigation. Xeriscaping refers to a method of landscape design that minimizes water use.

Revised Rezoning 4.1 (Multi-Family) at 148 and 154 James Road (Laidler)

> Amended by resolution CPAC20/021

 Report: Planning and Development Department – Development Planning Division, dated April 20, 2020

The Development Planner gave a presentation regarding the revised application, and answered questions regarding: whether it would be possible to make approval of this application conditional to the availability of 11 fully accessible units; whether this application should be an OCP amendment due to the requested building height variance not conforming to the OCP designation on Map 11 of the OCP; the lot coverage; whether previous CPAC recommendations were incorporated into the revised application; whether the project has been fast-tracked; whether the hallway and doorway widths meet accessibility requirements; the criteria which designates a new application as opposed to a revised application; the tenure of the rental units and whether these were discussed with staff; whether the donation concept was a staff initiative; who the landlord or operator is for the rental units; and whether any consideration was given to provide rent-to-buy options.

The proponent gave a presentation on the application, and answered questions regarding: whether the accessible units will have installed grab bars and wired-in power for automatic door openers; whether internal doorway and hallway widths are compliant with accessibility standards; whether a traffic study has been completed; whether there will be an on-site caretaker's office, and whether the donated unit can be dedicated for this purpose; whether the studio units will be outfitted with the appropriate accessibly fixtures and amenities; the durability of the sea lion sculpture over time; whether there is sufficient parking for caregivers and support providers; the proposed location of the public art piece and whether there has been discussions with the City for an alternate location; whether there is a strategy to support the intergenerational community concept; the pricing of the units and how this is being determined; the reason for shifting from the originally proposed rental units to market units and the large number of micro units in the revised application; the availability of lock-off suites; whether the units along the James Street side could have bedrooms located away from light and noise; the reason for the removal of threebedroom units from the application; whether millennials have been consulted on this project; whether there has been any input from Council on the development of the micro units; whether the Mayor has endorsed or suggested this type of project; whether there will be storage units and bicycle storage on site; and whether there will be a rooftop patio or outdoor amenity space.

522

Considered at the April 20, 2021 Council meeting

363

The Committee noted the following in discussion:

Amended by resolution CPAC20/021

- one Committee member suggested that the revised application may require an OCP amendment due to the building height variance not conforming to the OCP designation on Map 11 of the OCP, and that the lack of an OCP amendment may have City-wide implications;
- some Committee members suggested that the revisions to the application may be significant enough for this to be considered a new application;
- the micro units are too small to accommodate wheelchair accessibility; they should be constructed primarily for wheelchair accessibility;
- concerns were expressed regarding the longevity of the sea lion sculpture; the applicant should consider using the funds for the sea lion sculpture towards another community arts cause;
- there may be insufficient parking spaces for the proposal, especially for caregivers and support providers;
- there should be more balance in the unit types offered; in particular, there should be a greater number of two-bedroom units;
- the proposed amenities and distance to transit may not fully support senior and mobility-challenged residents;
- this location is not appropriate for micro suites or for the proposed quantity of micro suites, as the site is not close to transit, and the proposal close enough to frequent transit service, and the immediate neighbourhood does not include the quantity or diversity of amenities to support micro studio living;
- concerns were expressed that the units should be more affordable;
- in the studio units, the washer and dryer units should be located further away from the living space and away from the wall beds;
- the proposed project density is too high without significant rental benefit to the City; and
- · consider including lock-off suites in the proposal.

CPAC20/019

Moved, seconded, and CARRIED

THAT the meeting be extended by 30 minutes.

Discussion continued, with the Committee noting the following:

- consider turning the gift unit into a caretaker's unit;
- one member suggested that Council approval of the project should be subject to the 11 accessible units staying intact;
- other cities have set minimum sizes for micro suites, and the City could consider a similar policy;
- one member stated suppor for this application;

Amended by resolution CPAC20/021

523

Considered at the April 20, 2021 Council meeting

364

- the proposal should aim to retain as many mature trees on site as possible.
- reduction of parking spaces could encourage greater transit use:
- the public amenity space could be larger, especially with the small unit sizes; and
- storage units are important for smaller units;

The Committee suggested limiting the number of applications per meeting to one, as it gives each application fair consideration and input by the Committee.

CPAC20/020

Moved, seconded, and CARRIED

THAT staff and the applicant consider the comments provided during the Community Planning Advisory Committee meeting held on May 11, 2020 regarding the proposed project presented in the report dated April 20, 2020 from the Planning and Development Department – Development Planning Division regarding 148 and 154 James Road.

OCP Amendment and Rezoning -1865-1895 Charles Street (Porte Communities) 4.2 Report: Planning and Development Department – Development Planning Division, dated April 27, 2020

This item was postponed to a future meeting.

- Information
- 6. Adjournment

The Chair adjourned the meeting at 9:28pm.

Application Fact Sheet

Applicant: Dulex Sitka House Development Ltd.

Application Type: Rezoning

Project Description: A multi-family apartment building containing 88 units

consisting of 35 studio units, 29 one-bedroom units, 19 two-bedroom units, and five three-bedroom units

Development Permit Area: Development Permit Area 1: Neighbourhood Residential

Development Permit Area 5: Hazardous Lands

Application Number: 6700-20-195

Addresses: 148 and 154 James Road

Existing Zoning: Single Detached Residential (RS1) Zone

Proposed Zoning: Comprehensive Development (CD84) Zone

Existing OCP Designation: Multi-Family Residential

Proposed OCP Designation: No change

Surrounding Development: North: Single Detached Residential (RS1) lot. The site is

developed with a single family home but designated for

multi-family residential uses;

East: Low Density Townhouse Residential (RM3) lot. The site is developed with a 52-unit townhouse complex owned by Metro Vancouver Housing (Moray Place). The townhouses are two storeys in height and provide non-

market rental housing;

South: Low Density Townhouse Residential (RM3) lot. The

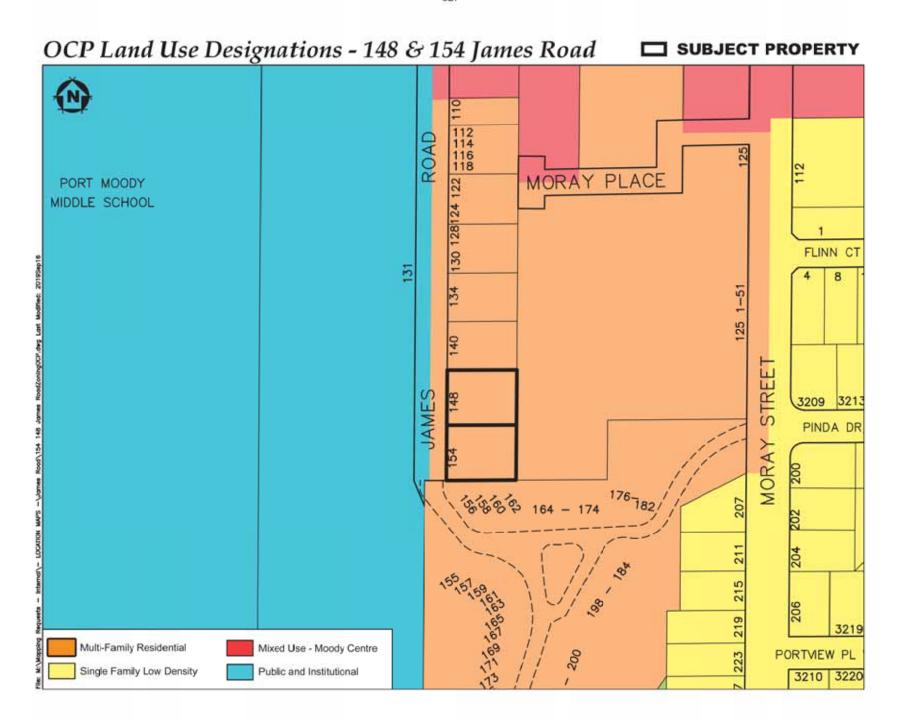

site is developed with a 50-unit tree-storey townhouse

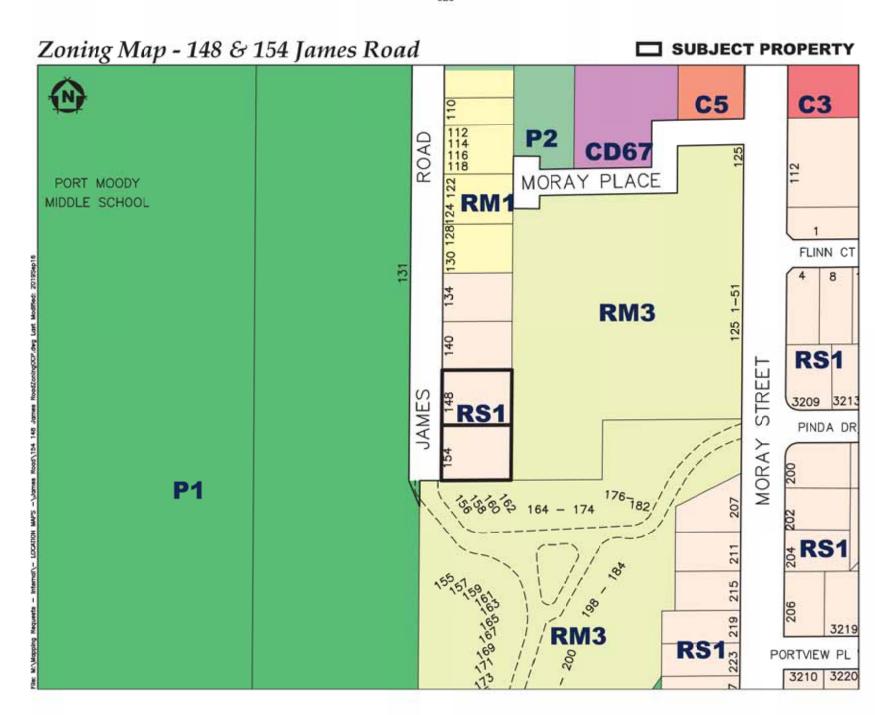

strata development (Tall Tree Estates); and

West: Moody Middle School zoned Civic Service (P1).

Development Statistics:

	RM8 Zone	Proposed Development				
Number of residential units	N/A	88

Multi-Family Sustainability Report Card

Purpose

The Sustainability Report Card recognizes that developers, builders, designers, and others proposing changes to the built environment have an important role in creating a sustainable community. Sustainability involves stewardship of land and environmental resources, as well as green building and a focus on design elements that bring people together and help communities flourish economically, socially, and culturally. Port Moody encourages innovative thinking in community design to achieve a more sustainable community.

To this end, the Report Card is a requirement for rezoning, development permit, and heritage alteration permit applications. The Report Card identifies performance measures based on community sustainability values: these measures are used to evaluate development proposals. The Report Card is intended to be a summary of overall project sustainability. It is a tool to be integrated with all other development approval requirements.

Process

There are six steps to follow in completing the Sustainability Report Card process:

- Make a development inquiry to Development Services regarding your proposed rezoning, development permit, or heritage alteration
 permit. Staff will provide you with a hard copy of the Sustainability Report Card and provide a weblink to portmoody.ca/SRC where
 you can find a fillable PDF version of the Report Card.
- Attend a pre-application meeting with City staff to discuss your proposal. The Planner will determine if the Sustainability Report Card is a document that must be submitted with your application.
- 3. If required, complete a Report Card by filling in the appropriate information that applies to your particular application and submit the completed Report Card (saved version of online fillable PDF or hard copy) to the appropriate City staff (<u>sustainabilityreportcard@portmoody.ca</u> or deliver to City Half Planning Department at 100 Newport Drive), along with a completed land use application.
- 4. The Planner will review the Report Card for completeness and accuracy and forward to staff in various departments for feedback.
 The Planner will determine your preliminary score and discuss the results of the staff review with you. You will then have an opportunity to improve your score with respect to the sustainability of your proposal and resubmit an updated Report Card.
- 5. The Planner will make comments, determine your final score, and prepare the Project Report Card Summary. The Summary will be included in the land use reports that are distributed to the Advisory Design Panel, Community Planning Advisory Committee, and Council.
- If your application is approved by Council, your final Report Card is maintained in the development file and a copy is provided to the City's Building Division.

Instructions

- Your Report Card must contain sufficient detail to ensure each measure can be evaluated. To do this, make reference to the appropriate
 plans, drawings, and reports that demonstrate how the performance measure is met.
- The relevance of the questions will depend on the nature and scope of your project, so not all questions will be applicable to all projects.
- Some measures are marked 'EARLY STAGE'. This indicates that these measures must be considered in the design phase as it is
 unlikely they can be added to a proposal later on.

575

- Similarly, some measures are marked 'BASELINE'. Although the Report Card is not a pass or fail test of development applications, it
 does set a minimum score to indicate the City's minimum expectations. Items labelled 'BASELINE' count toward a minimum score as
 they are considered to be low cost and readily achievable.
- Italicized terms are defined in the Glossary at the end of the Report Card document.
- Refer to the Resources section for links to Internet resources relevant to measures in the Report Card.

Scoring

- Performance measures are assigned weighted scores from 1 to 10 to indicate their significance based on: (1) level of difficulty to
 integrate into project design; (2) order-of-magnitude cost added to the project; (3) degree of effectiveness for increasing the overall
 project sustainability; (4) identified community priority in the Official Community Plan; and (5) level of urgency for Port Moody in
 terms of achieving community sustainability goals.
- City staff score the completed Report Card based on the principle of best achievable on each site for each performance measure.
 Where possible, points for achieving various means are indicated. In other cases, the number of means to achieve a performance measure may exceed the total points possible for an item. In this case, the Planner will make a fair assessment of the project's performance for this measure with respect to the conditions of the site as a percentage and translate this to the possible score.
- Only whole number scores will be assigned. This will be achieved by rounding to the nearest whole number. For example, if overall
 performance for a measure is deemed to be about 80 per cent and the possible score is out of 4, then a score of 3 points out of 4
 will be assigned.
- The Report Card is an iterative process with the applicant. The applicant has an opportunity to comment and make changes to their
 proposal before the scores are considered final and shared with public advisory bodies and Council.
- Additional space is provided for the applicant to address innovations and constraints not captured elsewhere in the Report Card.
 These items are not scored, but are given specific mention on the Project Report Card Summary.
- Staff will review your completed Report Card and provide feedback before your project is scored to give you the opportunity to achieve the highest score possible.

Monitoring

In general, the information required from the applicant for the Sustainability Report Card is similar to the kind of information required for a typical development application. However, to ensure accountability, you can expect the City to request additional information, such as: photos of installed systems or products, design drawings, professional reports, copies of receipts, or other records that can be used to verify the implementation of the selected sustainability measures. We encourage you to provide as much information as possible to assist City staff in their review of your development proposal.

Public Information

The public may request a review of any completed Report Card related to a development application. Copies of the Report Card are maintained by the Planning Division. The Development Services Department makes Report Cards available following completion of the project.

CULTURAL SUSTAINABILITY SECTION

How will the project contribute to Port Moody's status as 'City of the Arts'?

Arts

Performance Measure Description and Scoring

Project supports Port Moody's desire to be a "City of the Arts" by integrating artistic design into the site or building form or functionality (2 points).

Examples:

- · Creative stormwater management features.
- · Creative interaction of the project with the public.
- · Artistic panels in entry foyer.

Applicant Explanation and Reference to Plans, Drawings, and Reports

Describe: Rainwater barrels collection on roof to water roof landscape.	Staff Comments
No Roof Drains with no water going directly into storm - None.	
Roof is sloped to hidden perimeter gutters with increased down pipes with screens at ground floor to remove debris from storm water. Some downpipes will be diverted to splash pads then into	
landscape, then filtered threw landscape to area drains then into storm. Roof, hidden gutters and parkade tank on P2 will act as	
storm detention. Gutter drain gaskets, down pipe straining clean outs and landscape assembly will act like storm filters.

CULTURAL SUSTAINABILITY SECTION

How will the project contribute to Port Moody's status as 'City of the Arts'?

Innovation

Performance Measure Description and Scoring

C9 Cultural sustainability aspects not captured above.

Applicant Explanation and Reference to Plans, Drawings, and Reports

Amenities will provide for cultural social inclusion as well as cultural economic growth in the work and study stations. Providing E Bikes and scooter stalls creates both innovative cultural design and cultural heritage. Providing 50% of units to be adaptable and 15% of the units below market rental reduces cultural poverty. Close proximity to sky-train stations, shopping, daycare, schools and parks provides cultural economic growth. The wide variety of unit sizes will allow for any culture to be a resident regardless of their beliefs or economic situation at Sitka

CULTURAL SUSTAINABILITY SECTION

How will the project contribute to Port Moody's status as 'City of the Arts'?

Constraints

Performance Measure Description and Scoring

(Total Points Achieved for Applicable Items for this Application)

(Total Points Achieved/Maximum Achievable Score)

C10 Unique site aspects that limit cultural sustainability achievement.

Applicant Explanation and Reference to Plans, Drawings, and Reports

The use of cement hardi panels and stone works will limit cultural sustainability as these products last longer. The small site reduced the parking stalls thus limiting the culture sustainability towards residents with no vehicles and a planet with scarce natural resources. The small site ground floor aspect limited cultural sustainability for benches, plants and social interaction, so use of the roof top amenity was required as direct result of limited land use.

ENVIRONMENTAL SUSTAINABILITY SECTION How well does the project minimize the demands on the environment?

Site Context | Ecology

Performance Measure Description and Scoring

EN2 Project provides bird-friendly development through landscaping that provides habitat to native species and building design that reduces bird collisions.

See Vancouver Bird Strategy

Applicant Explanation and Reference to Plans, Drawings, and Reports

List all elements that reduce the impact that urbanization has on birds for this project:
-Planting design includes vegetation around the site to encourage bird habitat. Plantings are integrated in layers to allow for nesting and shelter. Shrub and tree species have been selected to provide food source.
-Tree protection to ensure retention of large trees on the adjacent property to the north. Creates bird friendly environment.
Bird collision mitigation:
Most birds will avoid patterns on glass with vertical stripes or horizontal stripes spaced 2 inches or less apart. Balcony glazing will include horizontal slats. Windows with screens and blinds

Performance Measure Description and Scoring

should be safe for birds. Plan ref :A-4.0 Elevations, Landscape

- EN3 Design of outdoor lighting minimizes the harmful effects of light pollution with technology that ensures lighting is:
 - · Only on when needed
 - · Only lights the area that needs it
 - · No brighter than necessary
 - · Minimizes blue light emissions
 - Fully shielded (pointing downward)

See International Dark Sky Association for Dark Sky Friendly Lighting.

Applicant Explanation and Reference to Plans, Drawings, and Reports

Describe the lighting plan for the site and its dark sky friendly features:
Lighting components around the building will be on wall scones with downward shield using Dark Sky standards.
Common areas will have minimum lights with motion activation for full lights. Blue light emissions will be reduced from not using incandescent and fluorescent, and using proper LED light bulbs.
Landscape lights placement will be coordinate with electrical consultant to reduce lights into locations that only require for life, safety and minimum aesthetic reasons.

SOCIAL SUSTAINABILITY SECTION

How well does the project address community health and wellness?

Community Building

Performance Measure Description and Scoring

Project provides urban vitalization by involving land owners and occupants, community groups, and end user groups who may be affected by the proposal in the planning process to identify and showcase Port Moody's unique assets, i.e. goes above and beyond standard notification and consultation.

Examples:

 Host a community-building workshop with the neighbourhood at the time of a project's inception to determine values and identify unique assets to leverage through design.

Staff will advise on notification requirements and appropriate stakeholder consultation

Applicant Explanation and Reference to Plans, Drawings, and Reports

Please identify stakeholders and explain their involvement:	Staff Comments
A Community Information meeting was held on March 11, 2021 and information available to the public between March 1st and March 12th. There were over 360 respondents with a significant amount of support for this project. As an example Jenny, a care aid at Eagleridge Hospital commented: I've lived in a small studio apartment off St Johns Street for the	
last five years. It's important to me that I live close to work, I don't own a car and walk everywhere I go. But I've found it next to impossible to afford a home in Port Moody. Sitka House will be an opportunity.	
Identify actions taken in response to stakeholder input: Community feedback suggested that more open space would be beneficial. Previous plans did not include a roof top amenity due to the significant costs.	
Sitka House has added the 3,000 sf amenity open to all residents. This will provide an opportunity for social connections between the residents while enjoying the open air.

Report Card Glossary

Accessible housing - Housing designed and constructed to be universally accessible to people of diverse ages and abilities.

Adaptable unit – A dwelling unit that provides flexible design features that meet BC Building Code minimum requirements; it can be adapted to meet the changing needs of any occupant for reasons of disability, lack of stamina, and progressing through different life stages to support independent living.

Accessible housing/unit – Housing with fixed design features to enable independent living for persons with disabilities, such as those in wheelchairs.

Affordable market housing – Housing that is affordable to moderate income households achieved through tenure, location, reduced parking, modesty in unit size, level of finishing, and design and durability over time as the buildings age.

BC Energy Step Code – BC Energy Step Code is a voluntary roadmap that establishes progressive performance targets (i.e., steps) that support market transformation from the current energy-efficiency requirements in the BC Building Code to net zero energy ready buildings.

Beautification – The process of making visual improvements appropriate to a specific place, including but not limited to building facades, landscaping, decorative or historic-style street elements, selection of paving/fencing materials and their treatment, etc. Improvements contribute to Port Moody's reputation as City of the Arts in a sustainable manner.

Brownfield – A term used in urban planning to describe land previously used for industrial purposes or some commercial uses where the expansion, redevelopment, or reuse of the property may be complicated by the potential presence of a hazardous substance, pollutant, or contaminant.

Car/Bike share network – Arrangements between two or more persons to share the use of a vehicle or bicycle for a specified cost and period of time.

Character-defining elements – The materials, forms, location, spatial configurations, uses, and cultural associations or meanings that contribute to the heritage value of a historic place, which must be retained to preserve its heritage value.

Crime Prevention Through Environmental Design (CPTED) – The design and effective use of the built environment to reduce the incidence of crime and improve the quality of life.

District energy systems – A system that uses renewable energy to pipe energy to buildings within a specified area for space heating, hot water, and air conditioning.

Ecological inventory – An inventory that identifies the ecological values in a natural habitat, and is usually the first step in an environmental impact assessment.

Electric vehicle (EV) – An automobile that uses one or more electric motors or traction motors for propulsion. An electric vehicle may be powered through a collector system by electricity from off-vehicle sources, or may be self-contained with a battery or generator to convert fuel to electricity.

Environmentally Sensitive Areas – Land designated as areas that need special protection because of its environmental attributes, such as rare ecosystems, habitats for species at risk and areas that are easily disturbed by human activities. Refer to <u>Map 13 of OCP</u>.

606

Report Card Glossary - continued

Greenfield – Undeveloped land in a city or rural area either used for agriculture or landscape design, or left to evolve naturally. These areas of land are usually agricultural or amenity properties being considered for urban development.

Greyfield – Economically obsolescent, out-dated, declining, and/or underutilized land, often with the presence of abundant surface parking.

Greywater – Wastewater from lavatories, showers, sinks, and washing machines that do not contain food wastes and that can be reused for purposes such as irrigation or flushing toilets.

Habitat corridor – Habitat areas, generally consisting of native vegetation, linking with larger areas of similar wildlife habitat. Corridors are critical for the maintenance of ecological processes, providing food, and allowing for the movement of animals and the continuation of viable populations.

Heat island effect – Heat islands form as vegetation is replaced by hard surfaces to accommodate growing populations. These surfaces absorb, rather than reflect, the sun's heat, causing surface temperatures and overall ambient temperatures to rise.

Heritage rehabilitation – The action or process of making possible a continuing or compatible contemporary use of a historic place through repair, alterations, and/or additions while protecting its heritage value.

Heritage restoration - Returning a historic place back to how it looked at any time in its past.

Invasive plant species – An invasive plant is a non-native species whose interaction causes economic harm, harm to human health, and/or environmental harm.

Light pollution – Brightening of the night sky caused by street lights and other man-made sources, which has a disruptive effect on natural cycles and inhibits the observation of stars and planets.

Market rental housing – Private, market rental rate housing units.

Naturescape planting – Landscaping with species that are naturally adapted to local climate, soils, predators, pollinators, and disease and, once established, require minimal maintenance.

Non-market rental housing – Subsidized rental housing for those unable to pay market-level rents including, but not limited to, public housing owned and operated by government agencies, non-profit housing owned and operated by public and private non-profit groups, and co-operative housing owned and managed by co-operative associations of the residents.

On-site power generation – The ability to generate power without transporting it from its source to where it can be utilized.

On-site renewable energy generation – The generation of naturally replenished sources of energy, such as solar, wind power, falling water, and geothermal energy.

Passive design – An approach to building design that uses the building architecture to minimize energy consumption and improve thermal comfort.

Public space – A social space that is generally open and accessible to people.

Report Card Glossary - continued

R-2000-Certified New Home – Best-in-class, energy-efficient homes with even higher levels of energy efficiency than ENERGY STAR-qualified new homes, as well as clean air and environmental features.

Smart technology – Technologies that allow sensors, databases, and/or wireless access to collaboratively sense, adapt to, and provide for users within the environment.

Statement of significance – The first essential step in any conservation project, which involves identifying and describing the character-defining elements; it is important in defining the overall heritage value of the historic place. Refer to the Standards and Guidelines for the Conservation of Historic Places in Canada (see Resources glossary).

Streetscape – The visual elements of a street, including the road, adjoining buildings, sidewalks, street furniture, trees, and open spaces that combine to form the street's character.

Storm water management plan – The management of water occurring as a result of development or precipitation that flows over the surface into a sewer system.

Transit oriented development (TOD) – A mixed-use residential and commercial area designed to maximize access to public transportation; it often incorporates features to encourage transit ridership. A TOD neighbourhood typically has a centre with a transit station or stop (train station, metro station, tram stop, or bus stop), surrounded by relatively high-density development with progressively lower-density development spreading outward from the centre. TODs generally are located within a radius of 400 to 800 metres from a transit stop, as this is considered to be an appropriate distance for walkability.

Universal access – This term refers to broad-spectrum ideas meant to produce buildings, products, and environments that are inherently accessible to both people without disabilities and people with disabilities.

Urban infill – An urban planning term that refers to new development that is sited on vacant or undeveloped land within an existing community, and that is enclosed by other types of development.

Urban forest – The total collection of trees and associated plants growing in a city or town. It includes trees in parks and yards, along roadways and paths, and in other areas, both on public and private lands.

Urban vitalization – The urban planning process of rehabilitating a place or "taking a place to a higher level" using a community-building process (early stage community involvement) to define the key characteristics that make a place unique or special; and applying the concepts of urban conservation to leverage a community's assets, most often in accordance with approved City plans.

Viewscape - The natural and built environment that is visible from a viewing point.

Walkability – The extent to which the built environment is friendly to the presence of people living, shopping, visiting, enjoying, or spending time in an area; improvements in walkability lead to health, economic, and environmental benefits.

Xeriscaping – This terms refers to landscaping and gardening in ways that reduce or eliminate the need for supplemental water from irrigation. Xeriscaping refers to a method of landscape design that minimizes water use.
