

Purpose

The Sustainability Report Card recognizes that developers, builders, designers, and others proposing changes to the built environment have an important role in creating a sustainable community. Buildings are a vital part of our community, providing shelter, employment, recreation opportunities, services, shopping and more. With the amount of time we spend in our buildings they play an essential role in how prepared we are for our changing climate, influence the vitality of our community, and shape our everyday lives.

The buildings we build today will be around for the next 60–80 years on average and it is crucial for the evolution of our community that these structures are built to the highest sustainability standards. In 2020 Council adopted the City’s Climate Action Plan, a comprehensive strategy laying out a pathway to become a carbon neutral, resilient community by 2050. This Plan includes various building-related actions that project proposals should incorporate to work towards the vision that:

“Port Moody is a resilient community that honours climate justice, leading the urgent response to climate change through collective action.”

– Climate Action Committee, 2019

Port Moody encourages innovative thinking in community design to achieve sustainable communities. To this end, the Report Card is a requirement for rezoning, development permit, heritage revitalization agreement, and heritage alteration permit applications. The Report Card identifies performance measures based on community sustainability values, and these measures are used to evaluate development proposals. The Report Card is a tool that summarizes overall project sustainability and is integrated with all other development approval requirements.

The Report Card focuses on performance criteria within four pillars of sustainability defined by the City as:

1. Cultural Sustainability

Cultural sustainability recognizes the need to honour and transmit cultural beliefs, practices, heritage conservation, and culture for future generations. Cultural sustainability is about fostering cultural rights, local culture and cultural identity in a community. Cultural sustainability can be achieved through innovation and preservation of identity through different forms of creative expressions (e.g., art, events), celebrating cultural customs, and preserving and transmitting cultural heritage and customs through design of culturally inclusive landscapes, architecture, programs, and amenities.

2. Economic Sustainability

Economic sustainability in the Port Moody context means offering a broad range of local employment opportunities that will reduce commute distances and times, encouraging creative and clean industry and jobs, and building a more sustainable financial future for the City. The impacts of this approach will reduce GHG emissions, enable active transportation as a more viable means of getting around, build more resilient local business communities, and strengthen the social fabric of the city.

3. Environmental Sustainability

Environmental sustainability refers to the protection, management, and monitoring of ecosystems and natural assets to ensure the long-term productivity and health of resources to meet future economic and social needs. Environmental sustainability involves protecting, restoring, and connecting environmental systems to maintain function and ecological integrity. It also acknowledges that human civilisation takes resources to sustain our modern way of life, recognizes the elements that place stress on the environment and incorporates how technology will drive our greener future.

4. Social Sustainability

Social sustainability is about inclusive and resilient societies that understand what citizens need from the places where they live, work and play and where citizens feel supported in their well-being and are encouraged to evolve. Social sustainability combines physical design with support mechanisms to enhance social liveability, amenities, and systems that actively support the capacity of current and future generations to create healthy and livable communities. Socially sustainable communities promote diversity, equity and inclusion, foster connectivity and provide a high quality of life.

Process

The Sustainability Report Card forms part of the application materials for rezoning, development permit, heritage revitalization agreement, and heritage alteration permit proposals. There are five steps to follow in completing the Sustainability Report Card process:

1. Consult with City planning staff to discuss your proposal and determine if a Sustainability Report Card must be submitted with your development application.
2. Following the initial conversation with staff, and while preparing your application, complete the Sustainability Report Card by filling in the appropriate information that applies to your application and submit a completed copy to your file manager.
3. The Sustainability Report Card will be marked three times:
 - a. Prior to first reading;
 - b. Prior to Advisory Design Panel and Land Use Committee; and
 - c. Final scoring prior to Development Permit issuance.

At each of these marking intervals Planning staff will review the Report Card for completeness and accuracy and forward to staff in various departments for marking. Staff will make comments, determine a score, and provide the applicant an opportunity to revise the Report Card. The score and comments will be included in the land use reports that are distributed to the Advisory Design Panel, Land Use Committee, and City Council.

4. Commitments indicated in the Report Card will be secured through various means including, but not limited to, Development Permit conditions, securities, and various agreements (e.g., Servicing Agreement) or covenants. The method of securing the commitment is noted for each criteria.
5. If your application is approved by Council, your final Sustainability Report Card is maintained in the development file and a copy is provided to the City's Building Division.

Instructions

- Your Report Card must contain sufficient detail to ensure each measure can be evaluated. Make reference to the appropriate plans, drawings, and reports that demonstrate how the performance measure is met where appropriate.
- The relevance of the questions will depend on the nature and scope of your project, so not all questions will be applicable to all projects. In this case, select N/A and the points will be subtracted from the overall points available to increase fairness. Some criteria do not include N/A as an option as this is expected/possible on each project.
- Key terms are defined in the [Glossary](#) at the end of the Report Card document.
- Refer to the Resources section in each criteria for links to web-based resources relevant to measures in the Sustainability Report Card.

Scoring

- Scoring of the Report Card reflects a project's overall ability to be a sustainable development. Criteria are assigned points to indicate their significance based on:
 1. the level of difficulty to integrate criteria into project design;
 2. the order-of-magnitude cost added to the project;
 3. alignment with identified City and community priorities;
 4. the level of urgency for Port Moody in terms of achieving community sustainability goals; and
 5. the degree of effectiveness for increasing overall project sustainability.
- Performance measures are ordered based on priority. The first performance measure under each topic area in each pillar is the highest priority. The highest priority performance measures typically offer the highest possible points.
- City staff score the completed Report Card based on the principle of best achievable on each site for each performance measure. Points for achieving various means are indicated. Where open ended responses are permitted, staff will make a fair assessment of the project's performance for the measure with respect to site conditions.
- Where criteria may not be applicable to your project due to constraints, select the N/A option and the points will be subtracted from the overall points available to increase fairness. Some criteria do not include N/A as an option as this is expected/possible on each project.
- The Report Card is an iterative process with the applicant. The applicant has an opportunity to comment and make changes to their proposal before the scores are considered final and shared with public advisory bodies and City Council.
- Additional space is provided for the applicant to address innovations and constraints not captured elsewhere in the Report Card. Innovation items have a maximum score of 3 points. Constraints are not scored but given specific mention in Council Reports. Applicants are required to provide a narrative of how the project is contributing to each pillar of sustainability.
- Staff will review your completed Report Card and provide feedback to give you the opportunity to achieve the highest score possible by the time the project is considered for adoption or permit approval.

Monitoring

In general, the information required from the applicant for the Sustainability Report Card is similar to the information required for a typical development application. However, to ensure accountability, the City may request additional information, such as: photos of installed systems or products, design drawings, professional reports, copies of receipts, or other records that can be used to verify the implementation of the selected sustainability criteria. We encourage you to provide as much information as possible to assist City staff in their review of your development proposal.

Public Information

Copies of the Report Card are maintained by the Development Planning Division and are included as an attachment to Council reports related to the application. Therefore, Report Cards are part of the public record.

Property and Applicant Information

Applicant: Isaac Beall

Telephone: 604-235-6967 **Email:** ibeall@anthemproperties.com

Registered owner: Anthem LMV Ghaar Holdings LP

Project address: 3180 St Johns Street

Proposed use: Purpose built rental / civic (worship) **Total floor space (m²):** 12,094 sq. m.

Building type: Mixed Use **Number of storeys:** 13

Number of units: 128

1. Cultural Sustainability

Arts

C1a *(applicants can choose between C1a or C1b)* (12 points possible)

Does the project designate space for artists or creative enterprises to be retained for the lifetime of the project?

- Yes
- No
- N/A *(applicants can choose between C1a or C1b)*

If yes:

Check all that apply: *(up to 12 points)*

- artist studios *(2 points for first studio + 1 point for each additional studio, max 8 points)*
- family-size live-work units – sold below market value *(3 points per unit, max 8 points)*
- family-size live-work units – sold at market value *(2 points per unit, max 6 points)*
- plaza, creative placemaking space, available for public use (e.g., outdoor stage) *(4 points)*
- temporary artist spaces on or off the site *(2 points)*
- publicly viewable exhibition space *(2 points)*
- developer identified need/opportunity *(up to 4 points)*

Please specify: _____

Provide the size and details of the proposed space(s):

For the spaces being provided in this project, how will operation be managed? (e.g., who is responsible for managing tenants, maintenance, etc)?

Resources

- [Developer Public Art Guidelines](#)
- [Art in Public Spaces Master Plan](#)
- [Arts and Culture Master Plan](#)

Enforcement

- Units (market and below market) will be secured through a Housing Agreement.
- Plaza/creative/exhibition space & temporary artist space will be confirmed through the Development Permit.
- Elements on Landscape Plans will be subject to securities.
- Formal written confirmation of arrangements for managing spaces will be required.

C16

(3 points possible)

Summarize the project's cultural sustainability contributions, including the performance criteria in this Report Card and additional elements not previously captured here.

Located in Port Moody's Cultural and Innovation District, the proposal features a rich, pedestrian-oriented public realm that encourages community vitality, inclusivity, and cultural sustainability, providing a vibrant gathering place for the Ismaili and non-Ismaili communities alike. The proposed development will greatly enhance the existing public realm and streetscape through the addition of an architecturally beautiful and functional cultural landmark. Artistically-designed street furniture, building design, visual arts, and landscaping are all elements that will complement the cultural and architectural learning, spiritual, and event gathering amenities for the community, all within walking distance to rapid transit on a high-visibility arterial thoroughfare.

The Ismaili community in the Port Moody and the Tri-Cities area has a long-standing history of community involvement and service, and securing a permanent home in close proximity to the Moody Centre Cultural District will contribute to further entrenching Port Moody as a cultural destination in the region.

Does the project protect and enhance the urban forest, prioritizing tree retention and planting of native or adaptive tree species which provide multi-storey habitat (groundcover, shrubs and trees) to increase ecological value, biodiversity, and resilience to climate change impacts?

- Yes
- No
- N/A

If yes:

Outline the following:

Number of existing significant mature trees protected on site (i.e., mature trees over 40 cm DBH):

_____ (up to 5 points)

Number of existing trees over 10 cm protected on site:

_____ (up to 5 points)

Replacement tree ratio: _____ (up to 5 points)

(Note: Native tree species are preferred for areas immediately adjacent to Environmentally Sensitive Areas)

- Trees planted on-site: _____
- Trees planted off-site: _____
- Cash-in-lieu: _____

Existing canopy cover (%): _____

Proposed canopy cover at 20 years post development (%): _____

If canopy cover is the same = 3 points

If proposed canopy cover exceeds existing = up to 5 points

Demonstrate ability of trees to reach full maturity.

Check all that apply:

(up to 5 points)

- Adequate soil volume as determined by the Canadian Landscape Standard (2 points)
- Designated space for significant trees/stand of trees to reach full maturity (2 points)
- Proximity to infrastructure (e.g., Building(s), power lines) (1 point)

Resources

[Tree Protection Bylaw](#)

[I-tree Canopy](#)

[Canadian Landscape Standard](#)

New canopy cover is calculated based on the type of trees that are being planted, at 20 year maturity.

Large Canopy Trees provide 125 m² per tree (e.g., Douglas Fir, Deodor Cedar, Red Oak)

Medium Canopy Trees provide 50 m² per tree (e.g., Evergreen magnolia, Honey locust)

Small Canopy Trees provide 25 m² per tree (e.g., Japanese maple, Giant Dogwood)

Sum Total Species Canopy Area for all proposed species and divide by gross site area to obtain mature canopy coverage percentage

Enforcement

- Elements on Landscape Plans will be subject to securities.
- Tree Protection Covenants may be applied.

Staff comments

No tree cover exists on the site but street tree planting will be required designed to address the conditions noted. Points awarded based on intent.

Score /20

EN2

(15 points possible)

Does the site stormwater management plan provide adequate stormwater quality, volume and groundwater protection to address the relevant senior and municipal government requirements for future rainfall expected with climate change?

Yes

No

If yes:

Do the site conditions work to restore stormwater flows to be closer to pre-development historical conditions? (2 points)

Yes

No

Indicate which of these approaches the project will use:

A. Nature-based Green Infrastructure solutions

Check all that apply: (up to 9 points)

Watercourse daylighting (3 points)

Constructed wetlands (3 points)

Rain gardens (up to 3 points)

Bioswales (up to 3 points)

Green roof/wall (up to 3 points)

Other – please describe: (up 2 points)

B. Engineered Green Infrastructure solutions

Check all that apply: (up to 4 points)

Rainwater harvesting (2 points)

Systems that support street trees (e.g., trenches, soil cells, structural soils, etc.) (1 point)

Roof downspout disconnection to Green Infrastructure (1 point)

Water quality structures (1 point)

Absorbent landscaping (1 point)

Other – please describe: (up to 2 points)

Detention and infiltration facilities.

Greenhouse Gas Emissions and Energy Reductions

EN14

(12 points possible)

Does the project provide a low carbon energy system (LCES), which prioritizes on-site local energy systems that provide heating, cooling and hot water heating? (Note: systems should meet a Coefficient of Performance of 2 or greater) Examples include: solar; district energy; heat pump; or geo exchange.

Yes

No

If yes:

Describe the system type: (up to 10 points)

- Heating mechanical system (up to 5 points)
 - Description: Packaged Terminal HP's and VRF with backup electric
 - Fuel source (e.g., electricity, renewable etc.): Electricity
- Hot water mechanical system (up to 3 points)
 - Description: Electric resistance and electric heat pump
 - Fuel source (e.g., electricity, renewable etc.): Electricity
- Cooling mechanical system (up to 2 points)
 - Description: Packaged Terminal heat pumps and VRF
 - Fuel source (e.g., electricity, renewable etc.): Electricity

Does the system use refrigerants with low global warming potential (GWP)?

Yes

No

N/A

If yes, check the low GWP system being installed: (up to 2 points)

- Centralized system (e.g., communal heat pump) using ammonia, R744, water, CO2, R1234ze, or R1234yf, R454b, R513a, R32, R410a, R407c, R134a (2 points)
- Distributed system (e.g., VRF) using R32 or equivalent (2 points)
- Individual system (e.g., split or individual heat pump) using R290 propane, R744, or R134a (2 points)
- Other (up to 2 points)

How will the project mitigate refrigerant leakage?

Factory refrigerant pressure tests. Certified Refrigeration contractors and manufacturer field reviews.

(7 points possible)

Will the project ensure occupants have clean, cool air during times of poor air quality and/or wildfire events beyond Building Code requirements?

Yes

No

If yes, check all that apply:

(up to 7 points)

- Improved mechanical ventilation (e.g., proper commissioning, increase outdoor air intake) (1 point)
- Improved air filtration (e.g., HEPA particulate air filtration) (1 point)
- Airtightness better than ACH of 2 (1 point)
- No indoor combustion appliances (e.g., gas stove or fireplace) (1 point)
- Homeowner/occupant health and safety information (1 point)
- Other – please describe: (up to 2 points)

Residential units and community centre spaces will have air conditioning as a climate-resiliency measure

Resources

[Guidance for Cleaner Air Spaces During Wildfire Smoke Events](#)

[Guide to Air Cleaners in the Home](#)

Enforcement

- Commitment will be secured through Building Permit.

(7 points possible)

Does the design of the project help to facilitate mental health, wellness and social connectedness?

Yes

No

If yes:

Check all that apply:

(up to 7 points)

- Semi-public gathering space with comfortable seating (1 point)
- All weather recreation areas/wellness space (1 point)
- Pet friendly units / amenities (e.g., dog run) (1 point)
- Greenspace that facilitates socialization (1 point)
- Prioritizing pedestrians (1 point)
- Creative design to promote social interaction (1 point)
- Other – please describe: (up to 2 points)

Reference to plans (e.g., landscape plans/architectural plans, etc.)

Resources

[Strengthening Neighbourhood Resilience](#)

Enforcement

- Elements on Architectural Plans will be secured through the Development Permit.
- Elements on Landscape Plans will be subject to securities.
- Pet friendly units will be secured through a Section 219 Covenant.

Staff comments

Please provide reference to plans for these commitments

Score /7

S10

(6 points possible)

Does the project provide urban vitalization by involving land owner and occupants, community groups, and end user groups who may be affected by the proposal in the planning process to identify and showcase Port Moody's unique assets (i.e. goes above and beyond standard notification and consultation)?

Example: Host a community-building workshop with the neighbourhood at the time of a project's inception to determine values and identify unique assets to leverage through design

Yes

No

If yes:

List all the stakeholders and their involvement: (1 point)

Local, regional, national, and international Ismaili Councils and their consultants involved in providing programming, design, wayfinding input. The Imara, the Jamati arm responsible for designing, constructing, and maintaining Jamatkhana and Imam properties has also been an active stakeholder.

Identify actions taken in response to stakeholder input (up to 5 points)

Instrumental in lifecycle, scope, spatial planning of the institutional component with a cultural and occupant-centric perspective. Consultation led to new social rooms, a server, porte-cochere, and rooftop amenity space with weather protection being added to the proposal. Stakeholder input will continue through design development and construction.

Resources

[A Guide to Community Revitalization](#)

Enforcement

- Summary of community engagement will be required.

Staff comments

Unclear to what extent the local (non-Ismaili) community was involved to this stage.

A community information meeting will be required as part of the process.

Will the project undertake any of the following analysis?

- Acoustic analysis (1 point)
- Thermal comfort analysis (1 point)
- CPTED analysis (1 point)

Enforcement

- Acoustic analysis identified as a Development Permit application requirement, as appropriate to the project location.
- Requirement for Thermal Comfort Analysis would be identified through the rezoning process.

Staff comments

copies of these analyses required but points awarded for intent

Score /3

S13

(3 points possible)

Does the design of the site prevent crime through crime prevention through environmental design principles (CPTED)?

- Yes
 No

If yes, describe the crime prevention design measures: *(up to 3 points)*

Passive surveillance to deter anti-social behavior:

- Windows overlooking public and private areas
- Transparency at building entrances and exits
- Landscape design that provides surveillance and visibility
- Ensuring problem areas are well lit (eg. pathways, stairs, entries/exits etc., parking areas)
- Provide visibility through screens/fences

Natural Access Control

- Clearly identifiable point of entries
- Eliminate design features that provide access to roofs and upper levels

Natural Territorial Reinforcement

- Maintained premises and landscaping such that it communicates an alert and active presence occupying the space.
- Display security system signage at access points.

Resources

[CPTED](#)

Enforcement

- A CPTED analysis is required for submission.
- Elements on Architectural Plans will be secured through the Development Permit.
- Elements on Landscape Plans will be subject to securities.

(2 points possible)

Climate change is expected to bring more frequent and intense weather that may result in increased and prolonged power outages. Will this project be designed to provide occupants basic needs amid prolonged power outage and extreme weather? (e.g., back-up power supply, energy independent features)

Yes

No

If yes, list all measures: (up to 2 points)

Enforcement

- Elements included in Civil Plans will be secured through the Servicing Agreement.
- Energy and mechanical systems will be confirmed through the Building Permit.

Staff comments

Score /2

S17

(2 points possible)

Does the project provide education and awareness of the sustainable features of the project for owners/occupants?

Examples include:

- Document is given to new owners at time of sale, covenant on title, inclusion/protection of features in strata bylaws
- Signage/display/art recognizing design, etc.

Yes

No

If yes, list all the education and awareness initiatives: *(up to 2 points)*

A renters handbook will be given to tenants at the time of move-in. The handbook will include information on sustainable features of the building as well as sustainable features within their specific unit (ie. kitchen appliances, washing machine and dryer, unit materials etc.).

Enforcement

- Written commitment from applicant detailing education and awareness.
- Common property features are required to be included in Strata Bylaws.

S21

(3 points possible)

Summarize the project's social sustainability contributions including the performance criteria in this Report Card and additional elements not previously captured here:

The state of the art Jamatkhana community centre and will become a spiritual and cultural destination in Port Moody. The project includes gathering spaces, an enhanced streetscape, a pedestrian-friendly public realm, classrooms, a rooftop amenity, a bike repair station, and work spaces, that are all geared to promote social interaction, improved mental health and wellness.

The proposed development is 100% purpose built market rental housing that will provide 128 units of much needed rental housing to the City of Port Moody. It is the intent at the time of RZ/DP submission that 100% of residential units be offered at 20% below median CMHC rents (Tri-Cities) at occupancy. This will be a significant contribution to the community in ensuring that future generations have affordable access to housing in Port Moody.

The project provides a range of unit sizes with adaptable and accessible design features (building, units, indoor and outdoor amenities) to ensure the building is socially sustainable for diverse age groups at present and into the future.

Enforcement

- Highlighted in Council reports.

Environmental Sustainability	172	23	83	66	44
Social Sustainability	165	0	86	79	48

Glossary of Terms

Accessible housing: Housing designed and constructed to be universally accessible to people of diverse ages and abilities.

Adaptable unit: A dwelling unit that provides flexible design features that meet BC Building Code minimum requirements; it can be adapted to meet the changing needs of any occupant for reasons of disability, lack of stamina, and progressing through different life stages to support independent living.

Accessible housing/unit: Housing with fixed design features to enable independent living for persons with disabilities, such as those in wheelchairs.

ACH: Air changes per hour.

Affordable market housing: Housing that is affordable to moderate income households achieved through tenure, location, reduced parking, modesty in unit size, level of finishing, and design and durability over time as the buildings age.

Beautification: The process of making visual improvements appropriate to a specific place, including but not limited to building facades, landscaping, decorative or historic-style street elements, selection of paving/fencing materials and their treatment, etc. Improvements contribute to Port Moody's reputation as City of the Arts in a sustainable manner.

BC Energy Step Code: BC Energy Step Code is a voluntary provincial roadmap that establishes progressive performance targets (i.e., steps) that support market transformation from the current energy-efficiency requirements in the BC Building Code to net zero energy ready buildings.

Brownfield: A term used in urban planning to describe land previously used for industrial purposes or some commercial uses where the expansion, redevelopment, or reuse of the property may be complicated by the potential presence of a hazardous substance, pollutant, or contaminant.

Car/Bike share network: Arrangements between two or more persons to share the use of a vehicle or bicycle for a specified cost and period of time.

Character-defining elements: The materials, forms, location, spatial configurations, uses, and cultural associations or meanings that contribute to the heritage value of a historic place, which must be retained to preserve its heritage value.

Crime Prevention Through Environmental Design (CPTED): The design and effective use of the built environment to reduce the incidence of crime and improve the quality of life.

Coastal Flooding: A flood is a general and temporary inundation of normally dry land areas. When a coastal process—such as waves, tides, storm surge, or heavy rainfall from coastal storms—produces that flood, it is called a coastal flood. Coastal areas, like all areas, can also flood from high rainfall or overflowing streams.

Coefficient of Performance (COP): Is a ratio of useful heating or cooling provided to work (energy) required. Higher COPs equate to higher efficiency, lower energy (power) consumption and thus lower operating costs.

District energy systems: A system that uses renewable energy to pipe energy to buildings within a specified area for space heating, hot water, and air conditioning.

Ecological inventory: An inventory that identifies the ecological values in a natural habitat and is usually the first step in an environmental impact assessment.

Electric vehicle (EV): An automobile that uses one or more electric motors or traction motors for propulsion. An electric vehicle may be powered through a collector system by electricity from off-vehicle sources or may be self-contained with a battery or generator to convert fuel to electricity.

Embodied greenhouse gas emissions: Embodied emissions refers to the greenhouse gas emissions created in various phases of a building or piece of infrastructure's full life cycle (e.g., material extraction, manufacturing, construction, maintenance, and end of life/disposal).

Environmentally Sensitive Areas: Land designated as areas that need special protection because of its environmental attributes, such as rare ecosystems, habitats for species at risk and areas that are easily disturbed by human activities. Refer to Map 13 of OCP.

Greenfield: Undeveloped land in a city or rural area either used for agriculture or landscape design or left to evolve naturally. These areas of land are usually agricultural, or amenity properties being considered for urban development.

Greyfield: Economically obsolescent, out-dated, declining, and/or underutilized land, often with the presence of abundant surface parking.

Greywater: Wastewater from lavatories, showers, sinks, and washing machines that do not contain food wastes and that can be reused for purposes such as irrigation or flushing toilets.

Habitat corridor: Habitat areas, generally consisting of native vegetation, linking with larger areas of similar wildlife habitat. Corridors are critical for the maintenance of ecological processes, providing food, and allowing for the movement of animals and the continuation of viable populations.

Heat island effect: Heat islands form as vegetation is replaced by hard surfaces to accommodate growing populations. These surfaces absorb, rather than reflect, the sun's heat, causing surface temperatures and overall ambient temperatures to rise.

Heritage rehabilitation: The action or process of making possible a continuing or compatible contemporary use of a historic place through repair, alterations, and/or additions while protecting its heritage value.

Heritage restoration: Returning a historic place back to how it looked at any time in its past.

Invasive plant species: An invasive plant is a non-native species whose interaction causes economic harm, harm to human health, and/or environmental harm.

Light pollution: Brightening of the night sky caused by streetlights and other man-made sources, which has a disruptive effect on natural cycles and inhibits the observation of stars and planets.

Market rental housing: market rent is the rent that an apartment, without rent or income restrictions or rent subsidies, would command in the open market considering its location, features, and amenities.

Naturescape planting: Landscaping with species that are naturally adapted to local climate, soils, predators, pollinators, and disease and, once established, require minimal maintenance.

Non-human companion: Means any domestic or feral pet under the care, custody, or ownership of a person.

Non-market rental housing: Subsidized rental housing for those unable to pay market-level rents including, but not limited to, public housing owned and operated by government agencies, non-profit housing owned and operated by public and private non-profit groups, and co-operative housing owned and managed by co-operative associations of the residents.

On-site power generation: The ability to generate power without transporting it from its source to where it can be utilized.

On-site renewable energy generation: The generation of naturally replenished sources of energy, such as solar, wind power, falling water, and geothermal energy.

Lock-off suites: Lock-off units are self-contained units which are smaller than the principal dwelling unit. Each unit must have direct access to a hallway, corridor or the outside, and a shared internal door which can be locked enabling both units to be independent.

Low albedo: Albedo is the measure of the reflectivity of a material. A high albedo means it reflects a lot of light and a low albedo means it absorbs a lot of light.

Low Carbon Energy System: Low carbon energy systems (“LCES”) supply heat energy primarily derived from highly efficient and renewable sources in order to provide space heating and conditioned ventilation air for buildings seeking to achieve low greenhouse gas emissions. These systems may also provide domestic hot water and cooling service.

Passive design: An approach to building design that uses the building architecture to minimize energy consumption and improve thermal comfort.

Public space: A social space that is generally open and accessible to people.

R-2000-Certified New Home: Best-in-class, energy-efficient homes with even higher levels of energy efficiency than ENERGY STAR-qualified new homes, as well as clean air and environmental features.

Sea Level Rise: Sea level rise is an increase in the level of the world’s oceans due to the effects of global warming.

Sequestered carbon: a natural or artificial process by which carbon dioxide is removed from the atmosphere and stored.

Smart technology: Technologies that allow sensors, databases, and/or wireless access to collaboratively sense, adapt to, and provide for users within the environment.

Statement of significance: The first essential step in any conservation project, which involves identifying and describing the character-defining elements; it is important in defining the overall heritage value of the historic place. Refer to the Standards and Guidelines for the Conservation of Historic Places in Canada (see Resources glossary).

Streetscape: The visual elements of a street, including the road, adjoining buildings, sidewalks, street furniture, trees, and open spaces that combine to form the street’s character.

Storm water management plan: The management of water occurring as a result of development or precipitation that flows over the surface into a sewer system.

Transit oriented development (TOD): A mixed-use residential and commercial area designed to maximize access to public transportation; it often incorporates features to encourage transit ridership. A TOD neighbourhood typically has a centre with a transit station or stop (train station, metro station, tram stop, or bus stop), surrounded by relatively high-density development with progressively lower-density development spreading outward from the centre. TODs generally are located within a radius of 400 to 800 metres from a transit stop, as this is considered to be an appropriate distance for walkability.

Triangulation: Triangulation is spatial design that gives people a reason to be in the space. In order to promote public interaction, common areas should contain amenities people don't have in their private residences such as a splash pad or play structure with triangular configuration in mind.

Universal access: This term refers to broad-spectrum ideas meant to produce buildings, products, and environments that are inherently accessible to both people without disabilities and people with disabilities.

Urban infill: An urban planning term that refers to new development that is sited on vacant or undeveloped land within an existing community, and that is enclosed by other types of development.

Urban forest: The total collection of trees and associated plants growing in a city or town. It includes trees in parks and yards, along roadways and paths, and in other areas, both on public and private lands.

Urban vitalization: The urban planning process of rehabilitating a place or "taking a place to a higher level" using a community-building process (early stage community involvement) to define the key characteristics that make a place unique or special; and applying the concepts of urban conservation to leverage a community's assets, most often in accordance with approved City plans.

Viewscape: The natural and built environment that is visible from a viewing point.

Walkability: The extent to which the built environment is friendly to the presence of people living, shopping, visiting, enjoying, or spending time in an area; improvements in walkability lead to health, economic, and environmental benefits.

Xeriscaping: Refers to landscaping and gardening in ways that reduce or eliminate the need for supplemental water from irrigation. Xeriscaping refers to a method of landscape design that minimizes water use.
