

## Purpose

The Sustainability Report Card recognizes that developers, builders, designers, and others proposing changes to the built environment have an important role in creating a sustainable community. Buildings are a vital part of our community, providing shelter, employment, recreation opportunities, services, shopping and more. With the amount of time we spend in our buildings they play an essential role in how prepared we are for our changing climate, influence the vitality of our community, and shape our everyday lives.

The buildings we build today will be around for the next 60–80 years on average and it is crucial for the evolution of our community that these structures are built to the highest sustainability standards. In 2020 Council adopted the City's Climate Action Plan, a comprehensive strategy laying out a pathway to become a carbon neutral, resilient community by 2050. This Plan includes various building-related actions that project proposals should incorporate to work towards the vision that:

**“Port Moody is a resilient community that honours climate justice, leading the urgent response to climate change through collective action.”**

– Climate Action Committee, 2019

Port Moody encourages innovative thinking in community design to achieve sustainable communities. To this end, the Report Card is a requirement for rezoning, development permit, heritage revitalization agreement, and heritage alteration permit applications. The Report Card identifies performance measures based on community sustainability values, and these measures are used to evaluate development proposals. The Report Card is a tool that summarizes overall project sustainability and is integrated with all other development approval requirements.

**The Report Card focuses on performance criteria within four pillars of sustainability defined by the City as:**

### 1. Cultural Sustainability

Cultural sustainability recognizes the need to honour and transmit cultural beliefs, practices, heritage conservation, and culture for future generations. Cultural sustainability is about fostering cultural rights, local culture and cultural identity in a community. Cultural sustainability can be achieved through innovation and preservation of identity through different forms of creative expressions (e.g., art, events), celebrating cultural customs, and preserving and transmitting cultural heritage and customs through design of culturally inclusive landscapes, architecture, programs, and amenities.

### 2. Economic Sustainability

Economic sustainability in the Port Moody context means offering a broad range of local employment opportunities that will reduce commute distances and times, encouraging creative and clean industry and jobs, and building a more sustainable financial future for the City. The impacts of this approach will reduce GHG emissions, enable active transportation as a more viable means of getting around, build more resilient local business communities, and strengthen the social fabric of the city.

### 3. Environmental Sustainability

Environmental sustainability refers to the protection, management, and monitoring of ecosystems and natural assets to ensure the long-term productivity and health of resources to meet future economic and social needs. Environmental sustainability involves protecting, restoring, and connecting environmental systems to maintain function and ecological integrity. It also acknowledges that human civilisation takes resources to sustain our modern way of life, recognizes the elements that place stress on the environment and incorporates how technology will drive our greener future.

### 4. Social Sustainability

Social sustainability is about inclusive and resilient societies that understand what citizens need from the places where they live, work and play and where citizens feel supported in their well-being and are encouraged to evolve. Social sustainability combines physical design with support mechanisms to enhance social liveability, amenities, and systems that actively support the capacity of current and future generations to create healthy and livable communities. Socially sustainable communities promote diversity, equity and inclusion, foster connectivity and provide a high quality of life.

## Process

The Sustainability Report Card forms part of the application materials for rezoning, development permit, heritage revitalization agreement, and heritage alteration permit proposals. There are five steps to follow in completing the Sustainability Report Card process:

1. Consult with City planning staff to discuss your proposal and determine if a Sustainability Report Card must be submitted with your development application.
2. Following the initial conversation with staff, and while preparing your application, complete the Sustainability Report Card by filling in the appropriate information that applies to your application and submit a completed copy to your file manager.
3. The Sustainability Report Card will be marked three times:
  - a. Prior to first reading;
  - b. Prior to Advisory Design Panel and Land Use Committee; and
  - c. Final scoring prior to Development Permit issuance.

At each of these marking intervals Planning staff will review the Report Card for completeness and accuracy and forward to staff in various departments for marking. Staff will make comments, determine a score, and provide the applicant an opportunity to revise the Report Card. The score and comments will be included in the land use reports that are distributed to the Advisory Design Panel, Land Use Committee, and City Council.

4. Commitments indicated in the Report Card will be secured through various means including, but not limited to, Development Permit conditions, securities, and various agreements (e.g., Servicing Agreement) or covenants. The method of securing the commitment is noted for each criteria.
5. If your application is approved by Council, your final Sustainability Report Card is maintained in the development file and a copy is provided to the City's Building Division.

## Instructions

---

- Your Report Card must contain sufficient detail to ensure each measure can be evaluated. Make reference to the appropriate plans, drawings, and reports that demonstrate how the performance measure is met where appropriate.
- The relevance of the questions will depend on the nature and scope of your project, so not all questions will be applicable to all projects. In this case, select N/A and the points will be subtracted from the overall points available to increase fairness. Some criteria do not include N/A as an option as this is expected/possible on each project.
- Key terms are defined in the [Glossary](#) at the end of the Report Card document.
- Refer to the Resources section in each criteria for links to web-based resources relevant to measures in the Sustainability Report Card.

## Scoring

---

- Scoring of the Report Card reflects a project's overall ability to be a sustainable development. Criteria are assigned points to indicate their significance based on:
  1. the level of difficulty to integrate criteria into project design;
  2. the order-of-magnitude cost added to the project;
  3. alignment with identified City and community priorities;
  4. the level of urgency for Port Moody in terms of achieving community sustainability goals; and
  5. the degree of effectiveness for increasing overall project sustainability.
- Performance measures are ordered based on priority. The first performance measure under each topic area in each pillar is the highest priority. The highest priority performance measures typically offer the highest possible points.
- City staff score the completed Report Card based on the principle of best achievable on each site for each performance measure. Points for achieving various means are indicated. Where open ended responses are permitted, staff will make a fair assessment of the project's performance for the measure with respect to site conditions.
- Where criteria may not be applicable to your project due to constraints, select the N/A option and the points will be subtracted from the overall points available to increase fairness. Some criteria do not include N/A as an option as this is expected/possible on each project.
- The Report Card is an iterative process with the applicant. The applicant has an opportunity to comment and make changes to their proposal before the scores are considered final and shared with public advisory bodies and City Council.
- Additional space is provided for the applicant to address innovations and constraints not captured elsewhere in the Report Card. Innovation items have a maximum score of 3 points. Constraints are not scored but given specific mention in Council Reports. Applicants are required to provide a narrative of how the project is contributing to each pillar of sustainability.
- Staff will review your completed Report Card and provide feedback to give you the opportunity to achieve the highest score possible by the time the project is considered for adoption or permit approval.

## Monitoring

---

In general, the information required from the applicant for the Sustainability Report Card is similar to the information required for a typical development application. However, to ensure accountability, the City may request additional information, such as: photos of installed systems or products, design drawings, professional reports, copies of receipts, or other records that can be used to verify the implementation of the selected sustainability criteria. We encourage you to provide as much information as possible to assist City staff in their review of your development proposal.

## Public Information

---

Copies of the Report Card are maintained by the Development Planning Division and are included as an attachment to Council reports related to the application. Therefore, Report Cards are part of the public record.

## Property and Applicant Information

**Applicant:** PCI Developments  
**Telephone:** 604-684-1151 **Email:** bhoward@pci-group.com  
**Registered owner:** PCI Developments  
**Project address:** 3006, 3008, 3010, 3020, 3022 Murray Street, Port Moody, BC  
**Proposed use:** Mixed Use (Resi,retail,recreation) **Total floor space (m<sup>2</sup>):** 56,910  
**Building type:** Concrete High Rise **Number of storeys:** 40  
**Number of units:** 820

## Final Score (staff to complete)

Pillar	Total possible points	Sum of N/A points	Sum of missed points	Applicant total points	Pillar % score
Cultural Sustainability	56	13	19	24	56
Economic Sustainability	93	3	51	39	43
Environmental Sustainability	172	8	58	106	64
Social Sustainability	165	0	92	73	44

# 1. Cultural Sustainability

## Arts

### C1a *(applicants can choose between C1a or C1b)* (12 points possible)

Does the project designate space for artists or creative enterprises to be retained for the lifetime of the project?

☒ Yes

☐ No

☐ N/A *(applicants can choose between C1a or C1b)*

If yes:

**Check all that apply:** (up to 12 points)

- ☒ artist studios (2 points for first studio + 1 point for each additional studio, max 8 points)
- ☐ family-size live-work units – sold below market value (3 points per unit, max 8 points)
- ☐ family-size live-work units – sold at market value (2 points per unit, max 6 points)
- ☒ plaza, creative placemaking space, available for public use (e.g., outdoor stage) (4 points)
- ☒ temporary artist spaces on or off the site (2 points)
- ☒ publicly viewable exhibition space (2 points)
- ☒ developer identified need/opportunity (up to 4 points)

Please specify: Community gym and private basketball court

**Provide the size and details of the proposed space(s):**

Artist Studios: 437 sqm of artist studios.  
 Plaza: 2500 sqm public plaza, providing space for activities such as street markets, fairs, performances, public art and more.  
 Community gym and private basketball court: The basketball court and community gym will be located at podium level.

**For the spaces being provided in this project, how will operation be managed?** (e.g., who is responsible for managing tenants, maintenance, etc)?

Artist studios: PCI (owner) to property manage the spaces  
 Plaza: City/TransLink will have a statutory right of way. PCI will maintain the plaza.  
 Community gym/basketball court: PCI (owner) to property manage the spaces

### Resources

[Developer Public Art Guidelines](#)  
[Art in Public Spaces Master Plan](#)  
[Arts and Culture Master Plan](#)

### Enforcement

- Units (market and below market) will be secured through a Housing Agreement.
- Plaza/creative/exhibition space & temporary artist space will be confirmed through the Development Permit.
- Elements on Landscape Plans will be subject to securities.
- Formal written confirmation of arrangements for managing spaces will be required.

### Staff comments

Provided documentation supports choices here. (Applicant chose both C1a & C1B. Can only choose one)

Based on current elements applicant received full marks. However, changes or alterations to this may lower future scores

Score **12** /12

**C1b** *(applicants can choose between C1a or C1b)***(6 points possible)**

**Does the project include artwork which is aligned with the Art in Public Spaces Master Plan and located in a publicly accessible or publicly owned space?** *(Note: Public Art Policy encourages at least 0.5% of construction costs)*  
(4 points)

☒ **Yes**☐ **No**☐ **N/A** *(applicants can choose between C1a or C1b)*

Applicants are encouraged to work with artists and/or art consultants early so that artworks can be incorporated in meaningful and creative ways. **Has an artist or art consultant been engaged for this project?**  
(2 points)

☐ **Yes**☒ **No****OR**

**Does the project provide an in lieu financial contribution to the City's Artwork Reserve Fund in accordance with the City's Public Art Policy?**  
(4 points)

☐ **Yes**☐ **No**☒ **N/A** *(applicants can choose between C1a or C1b)*

**What is the proposed contribution to the City's Artwork Reserve Fund?**  
*(Note: Public Art Policy encourages at least 0.5% of construction costs)*  
(up to 2 points)  
(2 points if contribution is at least 10% greater than recommendation)

**\$ amount:** \_\_\_\_\_ **% of construction budget:** \_\_\_\_\_

**Resources**[Developer Public Art Guidelines](#)[Art in Public Spaces Master Plan](#)[Arts and Culture Master Plan](#)**Enforcement**

- Formal written commitment to engage in a process to include public art will be required. Confirmation of the value of this commitment and securing this commitment through a letter of credit submitted prior to issuance of Development Permit will be required.
- Collection of public art funds prior to issuance of development permit will be required.

**Staff comments**

See prior comments concerning c1a or c1b.

Score  /6

## Enforcement

- Architectural elements will be secured through the Development Permit.
- Elements on Landscape Plans will be subject to securities.

## Staff comments

Half marks given. Applicant needs to confirm upon artistic roof amenity provided and other spaces.

Score **1** /2

## Enforcement

- Elements on Landscape Plans will be subject to securities.
- Elements included in Civil Plans will be secured through the Servicing Agreement.

## Staff comments

Provided elements appear strong. Applicant will need to address and identify changes if they do so.

Score **2** /2

## C2

(2 points possible)

**Does the project include artistically designed (professionally designed) architectural elements that enhance the overall visual appeal of the development (e.g., water feature)?**

☒ Yes

☐ No

**If yes, describe how:**

Examples of elements that enhance the visual appeal of the development and are key to the design include the building facade, plaza pavilion, a colonnade, an overpass bridge, and public amenity on the roof.

## C3

(2 points possible)

**Does the project include artistically designed (professionally designed) street furniture and/or streetscape enhancements (e.g., artistically designed benches, streetlights, tree grates)?** *(Note: consider maintenance and replacement of furniture/enhancements)*

☒ Yes

☐ No

☐ N/A

**If yes, describe the furniture/enhancements and how they will be maintained:**

We will carefully design the wayfinding, educational sign, streetlight and other street furniture to enhance public experience along Spring Street and into the transit plaza.

The seating elements will be customized to integrate with contextual elements of site, borrowing its form with the paving and building language. We will explore other custom architectural features through bus stop shelters, planter, and other landscape elements.

**C14****(3 points possible)**

Does your project include any innovative cultural sustainability aspects not captured in the Report Card?

☐ Yes

☒ N/A

If yes, please explain:

(up to 3 points)

**C15**

Does your project face any unique site constraints that limit cultural sustainability achievement?

☐ Yes

☒ No

If yes, please explain:

**C16****(3 points possible)**

Summarize the project's cultural sustainability contributions, including the performance criteria in this Report Card and additional elements not previously captured here.

A number of the project's guiding principles contribute to cultural sustainability and include:

1. Enhances Public Realm. Purposefully programmed public realm rooted in local culture and history.
2. Activated Spring Street. A curated human scale experience along Spring Street includes a diverse mix of retail and commercial spaces.
3. Housing for a Diverse Community. A diversity of unit mixes and inclusive housing opportunities are integrated into the development.

Public art plays a vital role in the building of complete communities, facilitating diverse engagement while instilling quality and sense of place for residents and visitors alike. The vision for Public Art at Spring Street, in line with Port Moody's strategic objective to "Enhance Public Spaces Through Arts and Culture", will expand creative place-making while reflecting the surrounding nature and heritage, all the while bringing people together. In line with the City's Art in Public Places Master Plan (2021), PCI will uphold Port Moody's status as "City of the Arts" by animating the development's public spaces with an inspiring public art program that:

1. Reflects the Indigenous heritage of the land
2. Engages its community
3. Leads innovative creative place-making practice

In addition to public art, the project will provide approximately 4700 sq ft of artist studios, a community gym, grocery store and a 27000 sq ft public plaza. The lot directly west of the proposed building is currently a concrete parking lot that connects with the Moody Center Station. This area provides the perfect space for a public plaza, providing space for a variety of activities such as street markets, fairs, performances, public art, and more. The third floor has a shared amenity space which is planned to be used as a fitness hub. The space has the benefit of being a stand alone pavilion between the two towers while being able to spill out to the adjacent outdoor area afforded by the podium rooftop.

In addition to the design of the buildings on site, the master planning and project infrastructure was designed with community and culture in mind. Mid-block pedestrian links break up the former industrial mega-blocks to encourage connection through the district in the North-South direction. This offers opportunities to incorporate pocket parks, mews, and plazas, thus supporting convenience and cohesion in the community. A generous green buffer zone separates pedestrians from vehicular traffic on St. Johns. Dedicated cycle lanes support safety for cyclist commuter traffic.

**Enforcement**

– Highlighted in Council reports

EC11

(3 points possible)

Does your project include any innovative economic sustainability aspects not captured?

☐ Yes

☒ N/A

If yes, please describe: (up to 3 points)

EC12

Does your project face any unique site constraints unique that limit economic sustainability achievement?

☐ Yes

☒ No

If yes, please describe:

**EC13****(3 points possible)**

**Summarize the project's economic sustainability contributions including the performance criteria in this Report Card and additional elements not previously captured here:**

The project is designed for economic values that reflect the economic sustainability goals of the Port Moody Sustainability Report Card:

1. Increased economic vitality
2. Reduced public expenditure on commute
3. Increased business confidence.

Employment generating spaces bring approximately 1,785 to 2,285 jobs in a diverse range of sectors including retail, office, institutional, and urban industrial.

The project supports regional employment and economic growth by creating approximately 16000 sq ft of ground floor retail and 40,800 sq ft of grocery area. The project also provides artist studios, maker-space and food and beverage establishment as well as essential services that are missing in that area, such as the grocery store. The grocery store will provide a significant amount of jobs to the area, and create convenience for neighborhood residents and transit riders. The idea within the TOD area is to provide a complete community, with daily needs within a reasonable distance.

The project supports active transportation to access shops and services within close proximity of the project. The development incorporates greenery, landscaping, and wide sidewalks to encourage pedestrian movement, prioritizing walking, cycling, and transit-use over cars and trucks. Locating services in close proximity to public transit represents an opportunity for the development to serve as a regional destination that attracts people and contributes to the economic growth of Port Moody.

The proposed development will generate a variety of public benefits that will serve as a lasting legacy for the Moody Centre neighborhood. The total value of all benefits is estimated to be \$20.4 million.

Benefits will also be delivered in the form of cash contributions to the City byway of Development Cost Charges, School Site Acquisition Charges and Community Amenity Contributions. These contributions will go towards growing Port Moody's Affordable Housing Fund, providing and improving park land, upgrading infrastructure facilities, purchasing land for new schools and meeting other needs of the local Port Moody community. The combined value of the cash contributions is \$9.7 million.

Additionally, over the course of the project, over \$3 million will be paid to the City in the form of rezoning, development permit and building permit application and review fees and once completed, the new development will generate additional property tax revenue for the City of Port Moody that is estimated to be at least \$1.5 million annually starting year 1.

### 3.Environmental Sustainability

#### Natural Environment

##### EN1

(20 points possible)

Does the project protect and enhance the urban forest, prioritizing tree retention and planting of native or adaptive tree species which provide multi-storey habitat (groundcover, shrubs and trees) to increase ecological value, biodiversity, and resilience to climate change impacts?

☒ Yes

☐ No

☐ N/A

If yes:

Outline the following:

Number of existing significant mature trees protected on site  
(i.e., mature trees over 40 cm DBH):

No protected mature trees. All existing trees will be removed (up to 5 points)

Number of existing trees over 10 cm protected on site:

All existing trees will be removed. (up to 5 points)

Replacement tree ratio: 2:1 (up to 5 points)

(Note: Native tree species are preferred for areas immediately adjacent to Environmentally Sensitive Areas)

- Trees planted on-site: 98
- Trees planted off-site: 8
- Cash-in-lieu: \_\_\_\_\_

Existing canopy cover (%): 1%

Proposed canopy cover at 20 years post development (%): 27%

*If canopy cover is the same = 3 points*

*If proposed canopy cover exceeds existing = up to 5 points*

Demonstrate ability of trees to reach full maturity.

Check all that apply:

(up to 5 points)

- ☒ Adequate soil volume as determined by the Canadian Landscape Standard (2 points)
- ☒ Designated space for significant trees/stand of trees to reach full maturity (2 points)
- ☒ Proximity to infrastructure (e.g., Building(s), power lines) (1 point)

#### Resources

[Tree Protection Bylaw](#)

[I-tree Canopy](#)

[Canadian Landscape Standard](#)

New canopy cover is calculated based on the type of trees that are being planted, at 20 year maturity.

Large Canopy Trees provide 125 m<sup>2</sup> per tree (e.g., Douglas Fir, Deodor Cedar, Red Oak)

Medium Canopy Trees provide 50 m<sup>2</sup> per tree (e.g., Evergreen magnolia, Honey locust)

Small Canopy Trees provide 25 m<sup>2</sup> per tree (e.g., Japanese maple, Giant Dogwood)

Sum Total Species Canopy Area for all proposed species and divide by gross site area to obtain mature canopy coverage percentage

#### Enforcement

## EN23

(3 points possible)

**Summarize the project's environmental sustainability contributions including the performance criteria in this Report Card and additional elements not previously captured here:**

The development regenerates and enhances the ecology of the site, by bringing the Dallas creek to life by resurfacing and reintroducing it into the natural landscape and improving riparian habitat through daylighting the stream. The project transforms the site from paved parking lots to a bio-diverse riparian area. The riparian area offers an opportunity to celebrate the natural ecology of the site while providing a green buffer against the neighboring development.

The development enhances the urban forest through reintroduction of native or adaptive plant species that provide multi-story habitat in addition to increasing biodiversity. Bird-friendly principles will be integrated in the project's landscape design. The tree canopy cover is increased, and natural shading elements and green roofs are integrated into the overall site design, contributing to the reduction of localized heat island effect.

The project is designed with a high-performance envelope that prioritizes passive design strategies to reduce overall building energy demand. Energy will be conserved through utilization of a low carbon energy system and energy efficient heating, cooling and lighting systems.

Embodied carbon will be reduced by optimizing the structural design to reduce the size of elements where possible and eliminate transfers. In addition to structure, low carbon envelope materials will be explored using the EC3 tool and incorporated into the final design where viable.

The development promotes active transportation by designing a pedestrian oriented neighborhood. Active and public transportation including walking, cycling, and public transit is encouraged in order to reduce greenhouse gas emissions from transportation.

Designing for resilience is a priority. The development will explore potential risks and integrate design measures associated with coastal flooding, overheating, wildfire smoke and increased rainfall which are typical risk factors for the Port Moody area.

Rainwater and stormwater flows will be detained and retained on-site through the integration of rain gardens, bioswales, and green roofs into the site and building design. These nature-based green infrastructure strategies will also support street trees. Potable water consumption for irrigation will be reduced by integrating systems like central control, rain sensors, and drip irrigation, and using non-water dependent material/features for ground cover.

# S21

(3 points possible)

**Summarize the project's social sustainability contributions including the performance criteria in this Report Card and additional elements not previously captured here:**

The project is being designed for social values that reflect the social sustainability goals of the Port Moody Sustainability Report Card:

1. Improved quality of life
2. Increased both real and perceived security & safety
3. Promoted social equality and stability
4. Increased cultural vitality
5. Social interaction and civic pride

The landscape spaces on site have been designed with social sustainability in mind and incorporate the following features:

1. An art and culture plaza designed to express the social values of the project.
2. Food trucks and edible landscaping allowing social hands-on interaction with the landscape.
3. A variety of difference types of landscape for different purposes, for example quiet zones, exercise activities and play.

Happy Cities has created a framework that draws on insights from public health, neuroscience, behavioural economics, and environmental psychology. A goal of this framework is centered around making the project into a social place with a sense of belonging, identity, and a place for all to enjoy. This framework aligns with the project's social values and has been used to guide the overall design.

The project proposes around 93% of housing to be purpose built market rental and 7% affordable rental housing, offering a secured rental option for residents immediately adjacent to rapid transit. This type of tenure is currently underrepresented in Port Moody with only 3% of total dwelling being purpose-built rentals. In addition to affordable housing, the proposal creates a pedestrian-focused street that provides the necessary social and cultural facilities to foster a sense of community cohesion and identity.

Social and physical wellness is promoted through construction of high-quality public and private amenities including the transit plaza, daylit creek and fitness facilities, ensuring the health and wellbeing of occupants living on site.

**Total Social Sustainability Pillar Points =  /165**

## Glossary of Terms

---

**Accessible housing:** Housing designed and constructed to be universally accessible to people of diverse ages and abilities.

**Adaptable unit:** A dwelling unit that provides flexible design features that meet BC Building Code minimum requirements; it can be adapted to meet the changing needs of any occupant for reasons of disability, lack of stamina, and progressing through different life stages to support independent living.

**Accessible housing/unit:** Housing with fixed design features to enable independent living for persons with disabilities, such as those in wheelchairs.

**ACH:** Air changes per hour.

**Affordable market housing:** Housing that is affordable to moderate income households achieved through tenure, location, reduced parking, modesty in unit size, level of finishing, and design and durability over time as the buildings age.

**Beautification:** The process of making visual improvements appropriate to a specific place, including but not limited to building facades, landscaping, decorative or historic-style street elements, selection of paving/fencing materials and their treatment, etc. Improvements contribute to Port Moody's reputation as City of the Arts in a sustainable manner.

**BC Energy Step Code:** BC Energy Step Code is a voluntary provincial roadmap that establishes progressive performance targets (i.e., steps) that support market transformation from the current energy-efficiency requirements in the BC Building Code to net zero energy ready buildings.

**Brownfield:** A term used in urban planning to describe land previously used for industrial purposes or some commercial uses where the expansion, redevelopment, or reuse of the property may be complicated by the potential presence of a hazardous substance, pollutant, or contaminant.

**Car/Bike share network:** Arrangements between two or more persons to share the use of a vehicle or bicycle for a specified cost and period of time.

**Character-defining elements:** The materials, forms, location, spatial configurations, uses, and cultural associations or meanings that contribute to the heritage value of a historic place, which must be retained to preserve its heritage value.

**Crime Prevention Through Environmental Design (CPTED):** The design and effective use of the built environment to reduce the incidence of crime and improve the quality of life.

**Coastal Flooding:** A flood is a general and temporary inundation of normally dry land areas. When a coastal process—such as waves, tides, storm surge, or heavy rainfall from coastal storms—produces that flood, it is called a coastal flood. Coastal areas, like all areas, can also flood from high rainfall or overflowing streams.

**Coefficient of Performance (COP):** Is a ratio of useful heating or cooling provided to work (energy) required. Higher COPs equate to higher efficiency, lower energy (power) consumption and thus lower operating costs.

**District energy systems:** A system that uses renewable energy to pipe energy to buildings within a specified area for space heating, hot water, and air conditioning.

**Ecological inventory:** An inventory that identifies the ecological values in a natural habitat and is usually the first step in an environmental impact assessment.

**Electric vehicle (EV):** An automobile that uses one or more electric motors or traction motors for propulsion. An electric vehicle may be powered through a collector system by electricity from off-vehicle sources or may be self-contained with a battery or generator to convert fuel to electricity.

**Embodied greenhouse gas emissions:** Embodied emissions refers to the greenhouse gas emissions created in various phases of a building or piece of infrastructure's full life cycle (e.g., material extraction, manufacturing, construction, maintenance, and end of life/disposal).

**Environmentally Sensitive Areas:** Land designated as areas that need special protection because of its environmental attributes, such as rare ecosystems, habitats for species at risk and areas that are easily disturbed by human activities. Refer to Map 13 of OCP.

**Greenfield:** Undeveloped land in a city or rural area either used for agriculture or landscape design or left to evolve naturally. These areas of land are usually agricultural, or amenity properties being considered for urban development.

**Greyfield:** Economically obsolescent, out-dated, declining, and/or underutilized land, often with the presence of abundant surface parking.

**Greywater:** Wastewater from lavatories, showers, sinks, and washing machines that do not contain food wastes and that can be reused for purposes such as irrigation or flushing toilets.

**Habitat corridor:** Habitat areas, generally consisting of native vegetation, linking with larger areas of similar wildlife habitat. Corridors are critical for the maintenance of ecological processes, providing food, and allowing for the movement of animals and the continuation of viable populations.

**Heat island effect:** Heat islands form as vegetation is replaced by hard surfaces to accommodate growing populations. These surfaces absorb, rather than reflect, the sun's heat, causing surface temperatures and overall ambient temperatures to rise.

**Heritage rehabilitation:** The action or process of making possible a continuing or compatible contemporary use of a historic place through repair, alterations, and/or additions while protecting its heritage value.

**Heritage restoration:** Returning a historic place back to how it looked at any time in its past.

**Invasive plant species:** An invasive plant is a non-native species whose interaction causes economic harm, harm to human health, and/or environmental harm.

**Light pollution:** Brightening of the night sky caused by streetlights and other man-made sources, which has a disruptive effect on natural cycles and inhibits the observation of stars and planets.

**Market rental housing:** market rent is the rent that an apartment, without rent or income restrictions or rent subsidies, would command in the open market considering its location, features, and amenities.

**Naturescape planting:** Landscaping with species that are naturally adapted to local climate, soils, predators, pollinators, and disease and, once established, require minimal maintenance.

**Non-human companion:** Means any domestic or feral pet under the care, custody, or ownership of a person.

**Non-market rental housing:** Subsidized rental housing for those unable to pay market-level rents including, but not limited to, public housing owned and operated by government agencies, non-profit housing owned and operated by public and private non-profit groups, and co-operative housing owned and managed by co-operative associations of the residents.

**On-site power generation:** The ability to generate power without transporting it from its source to where it can be utilized.

**On-site renewable energy generation:** The generation of naturally replenished sources of energy, such as solar, wind power, falling water, and geothermal energy.

**Lock-off suites:** Lock-off units are self-contained units which are smaller than the principal dwelling unit. Each unit must have direct access to a hallway, corridor or the outside, and a shared internal door which can be locked enabling both units to be independent.

**Low albedo:** Albedo is the measure of the reflectivity of a material. A high albedo means it reflects a lot of light and a low albedo means it absorbs a lot of light.

**Low Carbon Energy System:** Low carbon energy systems (“LCES”) supply heat energy primarily derived from highly efficient and renewable sources in order to provide space heating and conditioned ventilation air for buildings seeking to achieve low greenhouse gas emissions. These systems may also provide domestic hot water and cooling service.

**Passive design:** An approach to building design that uses the building architecture to minimize energy consumption and improve thermal comfort.

**Public space:** A social space that is generally open and accessible to people.

**R-2000-Certified New Home:** Best-in-class, energy-efficient homes with even higher levels of energy efficiency than ENERGY STAR-qualified new homes, as well as clean air and environmental features.

**Sea Level Rise:** Sea level rise is an increase in the level of the world’s oceans due to the effects of global warming.

**Sequestered carbon:** a natural or artificial process by which carbon dioxide is removed from the atmosphere and stored.

**Smart technology:** Technologies that allow sensors, databases, and/or wireless access to collaboratively sense, adapt to, and provide for users within the environment.

**Statement of significance:** The first essential step in any conservation project, which involves identifying and describing the character-defining elements; it is important in defining the overall heritage value of the historic place. Refer to the Standards and Guidelines for the Conservation of Historic Places in Canada (see Resources glossary).

**Streetscape:** The visual elements of a street, including the road, adjoining buildings, sidewalks, street furniture, trees, and open spaces that combine to form the street’s character.

**Storm water management plan:** The management of water occurring as a result of development or precipitation that flows over the surface into a sewer system.

**Transit oriented development (TOD):** A mixed-use residential and commercial area designed to maximize access to public transportation; it often incorporates features to encourage transit ridership. A TOD neighbourhood typically has a centre with a transit station or stop (train station, metro station, tram stop, or bus stop), surrounded by relatively high-density development with progressively lower-density development spreading outward from the centre. TODs generally are located within a radius of 400 to 800 metres from a transit stop, as this is considered to be an appropriate distance for walkability.

**Triangulation:** Triangulation is spatial design that gives people a reason to be in the space. In order to promote public interaction, common areas should contain amenities people don’t have in their private residences such as a splash pad or play structure with triangular configuration in mind.

**Universal access:** This term refers to broad-spectrum ideas meant to produce buildings, products, and environments that are inherently accessible to both people without disabilities and people with disabilities.

**Urban infill:** An urban planning term that refers to new development that is sited on vacant or undeveloped land within an existing community, and that is enclosed by other types of development.

**Urban forest:** The total collection of trees and associated plants growing in a city or town. It includes trees in parks and yards, along roadways and paths, and in other areas, both on public and private lands.

**Urban vitalization:** The urban planning process of rehabilitating a place or “taking a place to a higher level” using a community-building process (early stage community involvement) to define the key characteristics that make a place unique or special; and applying the concepts of urban conservation to leverage a community’s assets, most often in accordance with approved City plans.

**Viewscape:** The natural and built environment that is visible from a viewing point.

**Walkability:** The extent to which the built environment is friendly to the presence of people living, shopping, visiting, enjoying, or spending time in an area; improvements in walkability lead to health, economic, and environmental benefits.

**Xeriscaping:** Refers to landscaping and gardening in ways that reduce or eliminate the need for supplemental water from irrigation. Xeriscaping refers to a method of landscape design that minimizes water use.
